New AWS-Developer Dumps Free - Latest AWS-Developer Dumps Sheet

No software installation is required to go through the web-based Amazon AWS-Developer practice test. The PDF file of AWS-Developer real exam questions is easy to use on laptops, tablets, and smartphones. We have added all the Amazon AWS-Developer Questions, which have a chance to appear in the AWS-Developer real test. Our AWS Certified Developer Associate Exam (DVA-C02) (AWS-Developer) dumps PDF exam questions are beneficial to prepare for the test in less time.

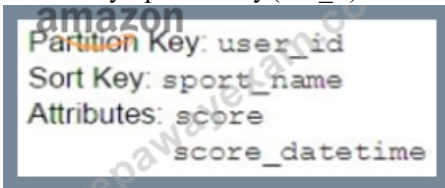

The AWS-Developer exam comprises 65 multiple-choice and multiple-response questions, which candidates have 130 minutes to complete. AWS-Developer exam covers a range of topics, including AWS services, application deployment, security, and troubleshooting. Passing the exam requires a score of 720 out of 1000. Certification as an AWS Certified Developer - Associate demonstrates that an individual has the knowledge and skills required to develop and deploy cloud-based applications on AWS, making them a valuable asset to any organization that uses the AWS platform.

Passing the AWS-Developer Certification Exam demonstrates to potential employers and clients that an individual has a deep understanding of AWS and is capable of developing high-quality, scalable, and fault-tolerant applications on the platform. It also opens up new job opportunities and can lead to higher salaries, as AWS is one of the most in-demand skills in the tech industry.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q342-Q347):

NEW QUESTION # 342

A company is building an application to track athlete performance using an Amazon DynamoDB table. Each item in the table is identified by a partition key (`user_id`) and a sort key (`sport_name`). The table design is shown below:

(Note: Not all table attributes are shown)

A Developer is asked to write a leaderboard application to display the top performers (`user_id`) based on the score for each `sport_name`.

What process will allow the Developer to extract results MOST efficiently from the DynamoDB table?

- A. Use a DynamoDB query operation with the key attributes of `user_id` and `sport_name` and order the results based on the score attribute.
- B. Create a global secondary index with a partition key of `sport_name` and a sort key of score, and get the results
- C. Create a local secondary index with a primary key of `sport_name` and a sort key of score and get the results based on the score attribute.
- D. Use a DynamoDB scan operation to retrieve scores and `user_id` based on `sport_name`, and order the results based on the score attribute.

Answer: C

NEW QUESTION # 343

An application under development is required to store hundreds of video files. The data must be encrypted within the application prior to storage, with a unique key for each video file.

How should the Developer code the application?

- A. Upload the data to an S3 bucket using server side-encryption with an AWS KMS key.
- B. Use the KMS Encrypt API to encrypt the data. Store the encrypted data key and data.
- C. Use the KMS GenerateDataKey API to get a data key. Encrypt the data with the data key. Store the encrypted data key and data.
- D. Use a cryptography library to generate an encryption key for the application. Use the encryption key to encrypt the data. Store the encrypted data.

Answer: C

Explanation:

Explanation

Refer AWS documentation - KMS GenerateDataKey

Returns a data encryption key that you can use in your application to encrypt data locally.

You must specify the customer master key (CMK) under which to generate the data key. You must also specify the length of the data key using either the field. You must specify one field or the other, but not both. For common key lengths (128-bit and 256-bit symmetric keys), we recommend that you use KeySpec. To perform this operation on a CMK in a different AWS account, specify the key ARN or alias ARN in the value of the KeyId parameter.

This operation returns a plaintext copy of the data key in the field of the response, and an encrypted copy of the data key in the CiphertextBlob encrypted under the CMK specified in the KeyId field of the request.

NEW QUESTION # 344

How can you peek at a message in Amazon SQS?

- A. Set up a CloudWatch alarm to auto send you the message
- B. You can't
- C. Log the message ID and the receipt handle for your messages and correlate them to confirm when a message has been received and deleted
- D. Send the message to Amazon S3

Answer: C

Explanation:

With version 2008-01-01, the PeekMessage action has been removed from Amazon SQS. This functionality was used mainly to debug small systems -- specifically to confirm a message was successfully sent to the queue or deleted from the queue.

To do this with version 2008-01-01, you can log the message ID and the receipt handle for your messages and correlate them to confirm when a message has been received and deleted.

NEW QUESTION # 345

In relation to Amazon Simple Workflow Service (Amazon SWF), what is an "Activity Worker"?

- A. An individual task undertaken by a workflow
- **B. A piece of software that implements tasks**
- C. The automation of a business process
- D. All answers listed are correct

Answer: B

Explanation:

In relation to Amazon Simple Workflow Service (Amazon SWF), an activity worker is a program that receives activity tasks, performs them, and provides results back. Which translates to a piece of software that implements tasks.

NEW QUESTION # 346

TestAWS (with AWS account ID 111122223333) has created 50 IAM users for its organization's employees. What will be the AWS console URL for these associates?

- A. <https://signin.aws.amazon.com/console/111122223333/>
- **B. [https:// 111122223333.signin.aws.amazon.com/console/](https://111122223333.signin.aws.amazon.com/console/)**
- C. <https://signin.aws.amazon.com/111122223333/console/>
- D. [https:// signin.aws.amazon.com/console/](https://signin.aws.amazon.com/console/)

Answer: B

Explanation:

When an organization is using AWS IAM for creating various users and manage their access rights, the IAM user cannot use the login URL <http://aws.amazon.com/console> to access AWS management console. The console login URL for the IAM user will have AWS account ID of that organization to identify the IAM user belongs to particular account. The AWS console login URL for the IAM user will be [https:// <AWS_Account_ID>.signin.aws.amazon.com/console/](https://<AWS_Account_ID>.signin.aws.amazon.com/console/).

In this case it will be [https:// 111122223333.signin.aws.amazon.com/console/](https://111122223333.signin.aws.amazon.com/console/)
