Scrum SSM Exam covers a range of topics, including Agile principles, Scrum ceremonies and artifacts, Agile planning and estimation, team collaboration and communication, and Agile metrics and reporting. It also includes questions on how to apply these concepts in the context of a scaled Agile environment.

Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q17-Q22):

NEW QUESTION # 17

According to SAFe, which of the following metrics are reported at the Inspect and Adapt event?

- **A. ART predictability measure**
- B. Cumulative value measure
- C. ART cycle velocity
- D. Cumulative value rate

Answer: A

Explanation:

According to the SAFe 6 Scrum Master documentation, one of the metrics that are reported at the Inspect and Adapt event is the ART predictability measure. This metric shows how well the ART delivers on its PI objectives, which are the SMART commitments made by the teams during PI planning. The ART predictability measure is calculated by dividing the total actual business value achieved by the total planned business value, as shown in the PI system demo. The ART predictability measure helps the ART to assess its performance, identify gaps, and improve its forecasting accuracy and reliability. NEW QUESTION # 19

When using Systems Thinking, you would agree that optimizing a component does not optimize the system.

- **A. True**
- B. False

Answer: A

NEW QUESTION # 20

What is one characteristic of an effective Agile team?

- **A. To provide steady, high quality, an incremental value**

- B. To collaborate and discuss components
- C. To concentrate and deliver the product scope
- D. To make the process visible to the Business Owners

Answer: A

Explanation:

Explanation/Reference:

NEW QUESTION # 21

What is one way uncommitted objectives help Agile Teams make a plan for the PI?

- A. They ensure the team has additional development options
- **B. They maintain the predictability of achieving the objectives**
- C. They generate additional ways to measure team progress
- D. They create an opportunity for teams to take on harder work

Answer: B

Explanation:

One way uncommitted objectives help Agile Teams make a plan for the PI is that they maintain the predictability of achieving the objectives. Uncommitted objectives are PI objectives that are not included in the team's commitment or counted against teams in the ART predictability measure. They are used to identify work that can be variable within the scope of a PI, such as stretch goals, spikes, innovation, or exploration¹ Uncommitted objectives help improve the predictability of delivering business value since they allow the team to adjust their scope based on the actual progress and feedback during the PI. They also provide the team with some flexibility and capacity to respond to changing needs and expectations, as well as to pursue learning and improvement opportunities¹²
