Valid Valid NSE7_EFW-7.2 Test Labs - Accurate NSE7_EFW-7.2 Exam Tool

Guarantee Purchasing Safety

People need to increase their level by getting the Fortinet NSE7_EFW-7.2 certification. If you take an example of the present scenario in this competitive world, you will find people struggling to meet their ends just because they are surviving on low-scale salaries. Even if they are thinking about changing their jobs, people who are ready with a better skill set or have prepared themselves with Fortinet NSE7_EFW-7.2 Certification grab the chance. This leaves them in the same place where they were.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q79-Q84):

NEW QUESTION # 79

Which configuration can be used to reduce the number of BGP sessions in on IBGP network?

- A. Route-reflector-client enable
- B. Route-reflector enable
- C. Route-reflector-server enable
- D. Route-reflector-peer enable

Answer: A

Explanation:

To reduce the number of BGP sessions in an IBGP network, you can use a route reflector, which acts as a focal point for IBGP sessions and readvertises the prefixes to all other peers. To configure a route reflector, you need to enable the route-reflector-client option on the neighbor- group settings of the hub device. This will make the hub device act as a route reflector server and the other

devices as route reflector clients.

NEW QUESTION # 80

What are two functions of automation stitches? (Choose two.)

- A. An automation stitch configured to execute actions in parallel can be set to insert a specific delay between actions.
- B. An automation stitch configured to execute actions sequentially can take parameters from previous actions as input for the current action.
- C. Automation stitches can be configured on any FortiGate device in a Security Fabric environment.
- D. Automation stitches can be created to run diagnostic commands and email the results when CPU or memory usage exceeds specified thresholds.

Answer: B,D

NEW QUESTION # 81

Refer to the exhibit, which shows an OSPF network.

Which types of link-state advertisements (LSA) will NGFW-1 send, if it is a backup designated router (BDR)?

- A. NGFW-1 will send type 1 and type 3 LSA.
- B. NGFW-1 will send type 1 and type 5 LSA.
- C. NGFW-1 will send type 1 and type 2 LSAs.
- D. NGFW-1 will send type 1 and type 4 LSA.

Answer: A

NEW QUESTION # 82

You created a VPN community using VPN Manager on FortiManager. You also added gateways to the VPN community. Now you are trying to create firewall policies to permit traffic over the tunnel however, the VPN interfaces do not appear as available options.

- A. Refresh the device status using the Device Manager so that FortiGate populates the IPsec interfaces
- B. Create interface mappings for the IPsec VPN interfaces before you use them in a policy.
- C. Configure the phase 1 settings in the VPN community that you didn't initially configure. FortiGate automatically generates the interfaces after you configure the required settings
- D. install the VPN community and gateway configuration on the FortiGate devices so that the VPN interfaces appear on the Policy Objects on FortiManager.

Answer: D

Explanation:

To use the VPN interfaces in a policy, you need to install the VPN community and gateway configuration on the FortiGate devices

first. This will create the VPN interfaces on the FortiGate and sync them with FortiManager. References:

NEW QUESTION # 83

Exhibit.

```
Routing table for VRF=0
B*  0.0.0.0/0 [20/0] via 100.64.1.254 (recursive is directly connected, port1), 00:03:58, [1/0]
C   10.1.0.0/24 is directly connected, port3
B   10.1.1.0/24 [200/0] via 172.16.1.2 (recursive is directly connected, tunnel_0), 00:03:25, [1/0]
B   10.1.2.0/24 [200/0] via 172.16.1.3 (recursive is directly connected, tunnel_1), 00:03:21, [1/0]
O   10.1.4.0/24 [110/2] via 10.1.0.100, port3, 00:04:51, [4/0]
O   10.1.10.0/24 [110/2] via 10.1.0.1, port3, 00:04:56, [1/0]
C   100.64.1.0/24 is directly connected, port2
C   100.64.2.0/24 is directly connected, port2
C   172.16.1.1/32 is directly connected, tunnel_0
C   172.16.1.2/32 is directly connected, tunnel_1
C   172.16.1.3/32 is directly connected, tunnel_0
C   172.16.1.3/32 is directly connected, tunnel_1
C   172.16.100.0/24 is directly connected, port8
```

Refer to the exhibit, which shows a partial routing table

What two conclusions can you draw from the corresponding FortiGate configuration? (Choose two.)

- A. add-route is disabled in the tunnel IPsec phase 1 configuration.
- B. OSPF is configured to run over IPsec.
- C. IPsec Tunnel aggregation is configured
- D. net-device is enabled in the tunnel IPsec phase 1 configuration

Answer: A,D

Explanation:

* Option B is correct because the routing table shows that the tunnel interfaces have a netmask of 255.255.255.255, which indicates that net-device is enabled in the phase 1 configuration. This option allows the FortiGate to use the tunnel interface as a next-hop for routing, without adding a route to the phase 2 destination1.

* Option D is correct because the routing table does not show any routes to the phase 2 destination networks, which indicates that add-route is disabled in the phase 1 configuration. This option controls whether the FortiGate adds a static route to the phase 2 destination network using the tunnel interface as the gateway2.

* Option A is incorrect because IPsec tunnel aggregation is a feature that allows multiple phase 2 selectors to share a single phase 1 tunnel, reducing the number of tunnels and improving performance3.

This feature is not related to the routing table or the phase 1 configuration.

* Option C is incorrect because OSPF is a dynamic routing protocol that can run over IPsec tunnels, but it requires additional configuration on the FortiGate and the peer device4. This option is not related to the routing table or the phase 1 configuration.
