Huawei HCIA-Security V4.0 Sample Questions (Q122-Q127):

NEW QUESTION # 122

Use a large number of controlled hosts to send a large number of network data packets to the attacked target to occupy the bandwidth of the attacked target and consume the network data processing capabilities of the server and network equipment to achieve the purpose of denial of service.

Which of the following options are common denial-of-service attacks? (Multiple Choice)

- A. SYN Flood
- B. Man-in-the-middle attack
- C. UDP flood
- D. CC attack

Answer: A,D

NEW QUESTION # 123

Information security aims to protect data in hardware, software, and their systems on information networks to prevent data damage, tampering, or breach due to occasional or malicious reasons and ensure proper system running and non-stop information services.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

This statement is correct because it accurately reflects the basic objective of information security. In HCIA- Security, information security is concerned with protecting information assets and the systems that store, process, and transmit them. These assets include hardware devices, software platforms, network resources, and the data itself. The purpose is to prevent unauthorized access, accidental loss, malicious tampering, disclosure, destruction, or interruption of services.

Information security is not limited to confidentiality alone. It also includes maintaining integrity, which means preventing unauthorized modification of data, and availability, which means ensuring that systems and services remain usable and continuous for authorized users. In practical terms, this means using controls such as access management, firewalls, intrusion prevention, antivirus protection, encryption, backup, authentication, and monitoring to reduce both accidental and intentional threats.

The phrase about ensuring proper system running and uninterrupted information services also matches the availability goal of security. Therefore, the statement correctly describes the overall aim of information security and is TRUE.

NEW QUESTION # 124

Using the proxy () method, the virtual gateway will encrypt the real URL that the user wants to access, and can adapt to different terminal types.

Answer:

Explanation:

web
