## CFO Statement

Part of our competitive advantage is that we penalize ourselves for late shipments and deliveries. Knowing where our shipments are at all times has a direct correlation to our bottom line and profitability. Additionally, I don't want to commit capital to building out a server environment.

### Question: 1

Flowlogistic wants to use Google BigQuery as their primary analysis system, but they still have Apache Hadoop and Spark workloads that they cannot move to BigQuery. Flowlogistic does not know how to store the data that is common to both workloads. What should they do?

- A. Store the common data in BigQuery as partitioned tables.
- B. Store the common data in BigQuery and expose authorized views.
- C. Store the common data encoded as Avro in Google Cloud Storage.
- D. Store the common data in the HDFS storage for a Google Cloud Dataproc cluster.

Answer: B

### Question: 2

Flowlogistic's management has determined that the current Apache Kafka servers cannot handle the data volume for their real-time inventory tracking system. You need to build a new system on Google Cloud Platform (GCP) that will feed the proprietary tracking software. The system must be able to ingest data from a variety of global sources, process and query in real-time, and store the data reliably. Which combination of GCP products should you choose?

- A. Cloud Pub/Sub, Cloud Dataflow, and Cloud Storage
- B. Cloud Pub/Sub, Cloud Dataflow, and Local SSD
- C. Cloud Pub/Sub, Cloud SQL, and Cloud Storage
- D. Cloud Load Balancing, Cloud Dataflow, and Cloud Storage

Answer: C

### Question: 3

Flowlogistic's CEO wants to gain rapid insight into their customer base so his sales team can be better informed in the field. This team is not very technical, so they've purchased a visualization

## EPIC CEE: Bridges Interfaces Application Essentials Exam (2026 Version) Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which property is used to group individual errors by a shared root cause?

- A. Error Scope
- B. Error Suppression
- C. Error Severity
- **D. Error Code**

**Answer: D**

Explanation:

The Error Code is a unique identifier assigned to a specific type of failure (e.g., " Patient Not Found ").

Because every instance of that specific failure across multiple messages will share the same code, it serves as the primary property for grouping errors to identify systemic issues or root causes.

### NEW QUESTION # 19

The Background Monitor Definition activity allows you to configure an interface to automatically restart after a system downtime, contingent on the status of a different interface.

- A. False
- **B. True**

**Answer: B**

Explanation:

The Background Monitor Definition in Bridges is used to manage interface health and automation. It allows administrators to set up dependencies, meaning an interface can be configured to start or restart only if a specific prerequisite interface is already running. This is particularly useful for ensuring that foundational interfaces (like those handling patient identity) are active before clinical data interfaces begin processing.

### NEW QUESTION # 20

Which of the following places in Bridges can you specify a single setting for a profile variable that will apply to all interfaces that use that profile variable?

- A. Profile Variable Master Table
- B. Interface Shared Definitions
- C. Background Monitor
- **D. Interface System Defaults**

**Answer: D**

Explanation:

The Interface System Defaults activity is the highest level of the configuration hierarchy. Settings defined here serve as the global " catch-all. " If a profile variable is defined in System Defaults and not overridden at the Specification or individual Interface level, that single setting applies across the entire Epic environment for all relevant interfaces.

### NEW QUESTION # 21

In which activity can you re-evaluate errors for workqueues?

- A. Error Log Report
- B. Message Search
- **C. Interface Error Workqueue Maintenance**
- D. Workqueue List

**Answer: C**

Explanation:

If workqueue rules are updated or if errors need to be reassessed against existing rules, the Interface Error Workqueue Maintenance

activity is used. This utility allows the system to sweep through existing errors and re-apply logic to ensure they are appearing in (or have been removed from) the correct workqueues.

### NEW QUESTION # 22

If interface specification ABC has 45 days listed as its purge days, and Data Exchange System Definitions has 60 days listed for purge days, how many days will messages on interface ABC last?

- A. 60 Days
- B. It depends on whether the message has active errors
- C. 45 Days
- D. 30 Days

**Answer: C**

Explanation:

Similar to profile variables, purge settings follow a hierarchy where the more specific configuration overrides the more general one. Because the Interface Specification is more specific than the System Definitions, its value of 45 days takes precedence. Messages for interfaces using that specification will be eligible for purging after 45 days.

### NEW QUESTION # 23
