

Test FCP_FSA_AD-5.0 Questions Answers - New FCP_FSA_AD-5.0 Exam Preparation

The FCP_FSA_AD-5.0 Practice Questions are designed and verified by experienced and renowned FCP - FortiSandbox 5.0 Administrator exam trainers. They work collectively and strive hard to ensure the top quality of Exam-Killer FCP_FSA_AD-5.0 exam practice questions all the time. The FCP_FSA_AD-5.0 Exam Questions are real, updated, and error-free that helps you in FCP - FortiSandbox 5.0 Administrator exam preparation and boost your confidence to crack the upcoming FCP_FSA_AD-5.0 exam easily.

In today's society, many enterprises require their employees to have a professional FCP_FSA_AD-5.0 certification. It is true that related skills serve as common tools frequently used all over the world, so we can realize that how important an FCP_FSA_AD-5.0 certification is, also understand the importance of having a good knowledge of it. Passing the FCP_FSA_AD-5.0 exam means you might get the chance of higher salary, greater social state and satisfying promotion chance. Once your professional FCP_FSA_AD-5.0 ability is acknowledged by authority, you master the rapidly developing information technology. With so many advantages, why don't you choose our reliable FCP_FSA_AD-5.0 actual exam guide, for broader future and better life?

New FCP_FSA_AD-5.0 Exam Preparation & FCP_FSA_AD-5.0 Real Exam

Exam-Killer real Fortinet FCP_FSA_AD-5.0 Exam Dumps are ideal for applicants who are busy in their routines and want to do quick preparation for the Fortinet FCP_FSA_AD-5.0 certification test. We guarantee that our actual FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) questions will be enough for you to prepare successfully for the FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) examination.

Fortinet FCP_FSA_AD-5.0 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Results analysis: This section involves understanding common attack vectors, analyzing malware behavior, and interpreting scan job reports to assess threats and make informed security decisions.
Topic 2	<ul style="list-style-type: none">Integration: This domain explains how to integrate FortiSandbox within the Fortinet Security Fabric and with third-party tools, as well as identifying ATP deployments and resolving integration-related issues.
Topic 3	<ul style="list-style-type: none">Deployment and system settings: This domain covers understanding FortiSandbox deployment within different stages of the Cyber Kill Chain, along with configuring system settings, high availability (HA) clusters, and troubleshooting system-related issues.
Topic 4	<ul style="list-style-type: none">Scanning and rating components: This section focuses on FortiSandbox scanning mechanisms, including scanning components, managing guest virtual machines, and configuring scan options to properly analyze and rate suspicious files.

Fortinet FCP - FortiSandbox 5.0 Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

How can you limit an administrator's access to scan jobs on FortiSandbox based on the system that submitted the scan request? (Choose one answer)

- A. By configuring device groups to assign to users
- B. By configuring netshare groups to define access
- C. By configuring administrator profiles that define job access
- D. By configuring access in the log server configuration settings

Answer: C

Explanation:

The correct answer is D. The Study Guide states that FortiSandbox has default administrative profiles and specifically says: "The Read Only profile is intended to be used for system-wide monitoring and reporting tasks, whereas the Device profile is intended to be used for monitoring alerts and reporting for a specific device." That wording directly matches the question requirement to limit access based on the system that submitted the scan request. In other words, FortiSandbox uses administrator profiles to control whether an admin can view broad system-wide activity or only jobs and alerts related to a specific submitting device.

This eliminates the other options. The Study Guide does not describe device groups, log server settings, or netshare groups as the mechanism for restricting admin visibility of scan jobs by submitter. Instead, access control is tied to the admin profile model. The Device profile is the exact fit because it narrows monitoring and reporting to a particular device context rather than the entire system. Therefore, the way to limit an administrator's access to scan jobs by the submitting system is by configuring administrator profiles that define job access.

NEW QUESTION # 11

Refer to the exhibit.

Which command must you use to configure the secondary node? (Choose one answer)

- A. `hc-worker -a -s10.50.1.30 -p<password>`
- B. `hc-worker -a -s10.50.1.40 -p<password>`
- C. `hc-worker -a -s10.25.1.30 -p<password>`
- D. `hc-worker -a -s10.25.1.50 -p<password>`

Answer: A

Explanation:

From the High Availability and Management lesson, the Study Guide states:

"You must configure the HA group name, password, and the virtual IP only on the primary node. After you configure those, you can

add the secondary node to the group using the commands shown on this slide." The hc-slave command (shown as hc-worker for secondary) requires pointing to the Primary Node's HA interface IP, not the cluster virtual IP or the primary node's port1.

From the exhibit:

Primary Node port4 (HA interface) = 10.50.1.30

Secondary Node port4 = 10.50.1.40

Primary Node port1 = 10.25.1.30

Cluster Virtual IP = 10.25.1.50

The secondary node must connect to the Primary Node's dedicated HA communication port (port4 = 10.50.1.30) to join the cluster, making Option B the correct answer.

NEW QUESTION # 12

You are asked to create some custom VMs to better represent your security environment. In which two FortiSandbox deployments is this supported? (Choose two answers)

- A. Device-based
- B. Private cloud
- C. FortiSandbox Cloud
- D. Azure non-nested mode

Answer: A,B

Explanation:

From the Scanning and Rating Components lesson, the Study Guide explicitly states:

"FortiSandbox allows you to modify the number of CPUs and memory assigned to a custom VM. This feature is supported on hardware models and private cloud VMs." Hardware models = Device-based (Option C) Private cloud VMs = Private cloud (Option A) Azure non-nested mode and FortiSandbox Cloud do not support custom VM creation as per the Study Guide.

NEW QUESTION # 13

Refer to the exhibit.

Which command must you use to configure the worker node? (Choose one answer)

- A. hc-worker -a -s10.25.1.50 -p<password>
- B. hc-worker -a -s10.50.1.30 -p<password>
- C. hc-worker -a -s10.25.1.30 -p<password>
- D. hc-worker -a -s10.75.1.254 -p<password>

Answer: A

Explanation:

From the High Availability and Management lesson, the Study Guide states:

"You must configure the HA group name, password, and the cluster virtual IP. The worker nodes provide load balancing. The primary node distributes scan jobs to the worker nodes."

"You must configure the HA group name, password, and the virtual IP only on the primary node... Devices will interact with the cluster using this virtual IP." From the exhibit topology:

Cluster Virtual IP address = 10.25.1.50

Primary Node port1 = 10.25.1.30

Secondary Node port1 = 10.25.1.40

Worker Node port1 = 10.75.1.10

The worker node must be configured to point to the Cluster Virtual IP (10.25.1.50), not the individual primary node IP. This is because worker nodes join the cluster by connecting to the cluster virtual IP address.

Therefore the correct command is: hc-worker -a -s10.25.1.50 -p<password>

NEW QUESTION # 14

Refer to the exhibit.

As a best practice, where must you rank the FortiClient inputs when configuring the job queue priority on FortiSandbox? (Choose one answer)

- A. After On-Demand but before FortiGate inputs
- B. After all other input methods
- C. Before FortiGate but after FortiMail inputs
- D. Before all other input methods

Answer: A

Explanation:

From the FortiClient EMS Integration lesson, the Study Guide explicitly states:

"It is always a good idea to place the files that are submitted by FortiClient, high on the Job Queue Priority since these are files that end users need immediate access to. In most cases, end users might not be willing to wait for a long time to access these files and placing the FortiClient submitted files high on the Job Queue Priority ensures that these files receive high priority for scanning from FortiSandbox." Looking at the exhibit, the Job Priority Configuration shows:

Positions 1-4: On-Demand inputs (highest priority)

Position 5: FortiGate InlineBlock

Positions 6-11: Other sources including FortiWeb, File RPC, Device, FortiClient As a best practice, FortiClient should rank after On-Demand (positions 1-4) but before FortiGate inputs - since end users need immediate file access, FortiClient submissions should be near the top but On-Demand scanning takes highest precedence.

NEW QUESTION # 15

.....

However, preparing for the FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) exam is not an easy job until they have real FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) exam questions that are going to help them achieve this target. They have to find a trusted source such as Exam-Killer to reach their goals. Get Fortinet FCP_FSA_AD-5.0 Certified, and then apply for jobs or get high-paying job opportunities.
