Plat-Arch-201指南 & Plat-Arch-201測試

KaoGuTi的最新的Salesforce Plat-Arch-201 認證考試練習題及答案問世之後，通過Salesforce Plat-Arch-201 認證考試已經不再是IT職員的夢想了。KaoGuTi提供的所有關於Salesforce Plat-Arch-201 認證考試練習題及答案品質都是是高的，和真實的考試題目有95%的相似性。KaoGuTi是值得你擁有的。如果你選擇了KaoGuTi的產品，你就為Salesforce Plat-Arch-201 認證考試做好了充分準備，成功通過考試就是很輕鬆的。

最新的 Application Architect Plat-Arch-201 免費考試真題 (Q87-Q92):

問題 #87

Universal Containers (UC) is facing data quality issues where Sales Reps are creating duplicate customer accounts, contacts, and leads. UC wants to fix this issue immediately by prompting users about a record that possibly exists in Salesforce. UC wants a report regarding duplicate records. What would be the recommended approach to help UC start immediately?

- A. Create a duplicate rule for account, lead, and contact, use standard matching rules for these objects, and set the action to block for both creates and edits.
- B. Create a duplicate rule for account, lead, and contact, use standard matching rules for these objects, and set the action to

report and alert for both creates and edits.

- C. Create a before insert and update trigger on account, contact, and lead, and send an error if a duplicate is found using a custom matching criteria.
- D. Create an after insert and update trigger on the account, contact and lead, and send an error if a duplicate is found using a custom matching criteria.

答案: B

解題說明:

Creating a duplicate rule for account, lead, and contact, using standard matching rules for these objects, and setting the action to report and alert for both creates and edits can help UC fix the issue immediately by prompting users about a record that possibly exists in Salesforce. This can also generate a report regarding duplicate records that can be used for further analysis and resolution

問題 #88

NTO processes orders from its website via an order management system (OMS). The OMS stores over 2 million historical records and is currently not integrated with SF. The Sales team at NTO using Sales cloud and would like visibility into related customer orders yet they do not want to persist millions of records directly in Salesforce. NTO has asked the data architect to evaluate SF connect and the concept of data verification. Which 3 considerations are needed prior to a SF Connect implementation? Choose 3 answer

- A. Assess whether the external data source is reachable via an ODATA endpoint.
- B. Configure a middleware tool to poll external table data
- C. Create a 2nd system Admin user for authentication to the external source.
- D. Develop an object relationship strategy.
- E. Identify the external tables to sync into external objects

答案: A,D,E

解題說明:

The three considerations needed prior to a SF Connect implementation are to develop an object relationship strategy, identify the external tables to sync into external objects, and assess whether the external data source is reachable via an ODATA endpoint. SF Connect is a feature that allows integrating external data sources with Salesforce using external objects. External objects are similar to custom objects, but they store metadata only and not data. They enable on-demand access to external data via standard Salesforce APIs and user interfaces. To implement SF Connect, a data architect needs to consider how the external objects will relate to other objects in Salesforce, which external tables will be exposed as external objects, and whether the external data source supports ODATA protocol for data access.

問題 #89

Salesforce is being deployed in Ursa Major Solar's disparate, multi-system ERP environment.

Ursa major Solar wants to maintain data synchronization between systems. Which two techniques should be used to achieve this goal? (Choose two.)

- A. Utilize an MDM strategy to outline a single source of truth.
- B. Integrate Salesforce with the ERP environment.
- C. Utilize workbench to update files within systems.
- D. Build synchronization reports and dashboards.

答案: A,B

解題說明:

Option A is correct because integrating Salesforce with the ERP environment is a technique to maintain data synchronization between systems. Option C is correct because utilizing an MDM strategy to outline a single source of truth is another technique to ensure data quality and consistency across systems.

問題 #90

Universal Container (UC) has accumulated data over years and has never deleted data from its Salesforce org. UC is now exceeding the storage allocations in the org. UC is now looking for option to delete unused from the org. Which three recommendations should a data architect make in order to reduce the number of records from the org? Choose 3 answer

- A. Archive the records in enterprise data warehouse (EDW) before deleting from Salesforce.
- B. Identify records in objects that have not been modified or used In last 3 years.
- C. Use hard delete in batch Apex to permanently delete records from Salesforce.
- D. Use hard delete in Bulk API to permanently delete records from Salesforce.
- E. Use Rest API to permanently delete records from the Salesforce org.

答案： A,B,D

解題說明：

Using hard delete in Bulk API, identifying records that have not been modified or used in last 3 years, and archiving the records in EDW before deleting from Salesforce are all good recommendations to reduce the number of records from the org. Using hard delete in batch Apex or Rest API may not be as efficient or scalable as Bulk API

問題 #91

Universal Containers (UC) has a multi-level master-detail relationship for opportunities, a custom opportunity line item object, and a custom discount request. UC has opportunity as master and custom line item object as detail in master-detail relationship. UC also has a custom line item object as master and a custom discount request object as detail in another master-detail relationship. UC has a requirement to show all sums of discounts across line items at an opportunity level. What is the recommended solution to address these requirements?

- A. Remove the master-detail relationships and rely completely on workflow/triggers to summarize the discount amount.
- B. Roll-up discount request amount at the line-item-level and line-item-level summary discount at the opportunity level.
- C. Use roll-up for the line-item-level summary and a trigger for the opportunity amount summary, as only one level roll-up is allowed.
- D. Update the master-detail relationships to lookup relationships in order to allow the discount amount to roll up.

答案： B

解題說明：

The recommended solution to address the requirements of Universal Containers (UC) is to roll-up discount request amount at the line-item-level and line-item-level summary discount at the opportunity level. This solution would allow UC to show all sums of discounts across line items at an opportunity level using standard roll-up summary fields. Since UC has a multi-level master- detail relationship for opportunities, a custom opportunity line item object, and a custom discount request object, they can use two levels of roll-up summary fields to aggregate the discount amounts from the child objects to the parent objects. For example, they can create a roll-up summary field on the custom line item object to sum up the discount request amounts from the custom discount request object. Then, they can create another roll-up summary field on the opportunity object to sum up the line-item-level summary discounts from the custom line item object.
