MuleSoft Certified Developer - Level 1 (Mule 4) Sample Questions (Q155-Q160):

NEW QUESTION # 155

Refer to the exhibits.

A Mule application has an HTTP Request that is configured with hardcoded values. To change this, the Mule application is configured to use a properties file named config.yaml.
What valid expression can the HTTP Request host value be set to so that it is no longer hardcoded?

- A. \${training.host}
- **B. #[training:host]**
- C. #[training.host]
- D. \${traininghost}

Answer: B

NEW QUESTION # 156

Refer to the exhibit.

What can be added to the flow to persist data across different flow executions?

- A. properties of the Mule runtime app object
- B. session variables
- **C. Key/value pairs in the ObjectStore**
- D. Properties of the Mule runtime flow object

Answer: C

Explanation:

An object store is a facility for storing objects in or across Mule applications. Mule runtime engine (Mule) uses object stores to persist data for eventual retrieval. Internally, Mule uses object stores in various filters, routers, and other message processors that need to store states between messages.

Object stores are available in all deployment targets. If you deploy your application to CloudHub, you can also use Object Store V2.

Correct answer is Key/value pair in Object store

MuleSoft Documentation reference :

<https://docs.mulesoft.com/mule-runtime/4.3/mule-object-stores#use-cases>

NEW QUESTION # 157

Refer to the exhibits.

A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

Refer to the exhibits. A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

- **A. Response body: "Error" Default response status code: 200**
- B. Error response body: error, description Default error response status code: 500
- C. Response body: "Success - Begin" Default response status code: 200
- D. Response body: "Success - End" Default response status code: 200

Answer: A

Explanation:

answer: Response body: "Error" Default response status code: 200.

1) Payload is successfully set to "Success - Started Flow"

2) When HTTP Request throws an error, execution halts

#[error.description] = "ABC"

#[error.errorType] = "XYZ"

3) The On Error Continue scope handles the error. When On Error Continue scope is invoked, all the processors in error block are executed and success response is sent back to the client with payload which is set in error flow. In this case payload is set to "Error" value in error block.

4) "Error" is returned to the requestor in the body of the HTTP request with HTTP Status Code: 200 as On error continue always sends success error code.

NEW QUESTION # 158

What statement is a part of MuleSoft's description of an application network?

- A. Creates and manages high availability and fault tolerant services and infrastructure
- B. Creates and manages a collection of JMS messaging services and infrastructure
- C. Leverages Central IT to deliver complete point-to-point solutions with master data management
- **D. Creates reusable APIs and assets designed to be consumed by other business units**

Answer: D

Explanation:

Creates reusable APIs and assets designed to be consumed by other business units

NEW QUESTION # 159

Refer

to the exhibits. A web client submits a request to `http://localhost:8081/flights?destination=SFO` and the Web Service Consumer throws a WSC:BAD_REQUEST error.

What is the next step to fix this error?

□

- A. set a JSON payload before the Consume operation that contains the destination query parameter
- B. set a property in the Consume operation equal to the destination query parameter
- **C. Set a header in the Consume operation equal to the destination query parameter**
- D. set a SOAP payload before the Consume operation that contains the destination query parameter

Answer: C

NEW QUESTION # 160

.....
