Salesforce-AI-Specialist Free Dumps Free PDF | Reliable Training Salesforce-AI-Specialist For Exam: Salesforce Certified AI Specialist Exam

We provide the best privacy protection to the client and all the information of our client to buy our Salesforce-AI-Specialist test prep is strictly kept secret. All our client come from the whole world and the people in some countries attach high importance to the privacy protection. Even some people worry about that we will sell their information to the third side and cause unknown or serious consequences. The aim of our service is to provide the Salesforce-AI-Specialist Exam Torrent to the client and help them pass the exam and not to disclose their privacy to others and seek illegal interests.

Salesforce Certified AI Specialist Exam Sample Questions (Q48-Q53):

NEW QUESTION # 48

An AI Specialist wants to use the related lists from an account in a custom prompt template. What should the AI Specialist consider when configuring the prompt template?

- A. The text encoding (for example, UTF-8, ASCII) option
- **B. The maximum number of related list merge fields**
- C. The choice between XML and JSON rendering formats for the list

Answer: B

Explanation:

When configuring a custom prompt template to use related lists, the AI Specialist must be aware of the maximum number of related list merge fields that can be included. Salesforce enforces limits to ensure prompt templates perform efficiently and do not overload the system with too much data. As a best practice, it's important to monitor and optimize the number of merge fields used.

* Option B is correct because there is a limit on how many related list merge fields can be included in a prompt template.

* Option A (text encoding) and Option C (XML/JSON rendering) are not key considerations in this context.

* Salesforce Prompt Builder Documentation: https://help.salesforce.com/s/articleView?id=sf.prompt_builder.htm

NEW QUESTION # 49

Universal Containers (UC) wants to create a new Sales Email prompt template in Prompt Builder using the "Save As" function. However, UC notices that the new template produces different results compared to the standard Sales Email prompt due to missing hyperparameters.

What should UC do to ensure the new prompt template produces results comparable to the standard Sales Email prompts?

- A. Revert to using the standard template without modifications.
- **B. Manually add the hyperparameters to the new template.**
- C. Use Model Playground to create a model configuration with the specified parameters.

Answer: B

Explanation:

When Universal Containers creates a new Sales Email prompt template using the "Save As" function, missing hyperparameters can result in different outputs. To ensure the new prompt produces comparable results to the standard Sales Email prompt, the AI

Specialist should manually add the necessary hyperparameters to the new template.

* Hyperparameters like Temperature, Frequency Penalty, and Presence Penalty directly affect how the AI generates responses. Ensuring that these are consistent with the standard template will result in similar outputs.

* Option A (Model Playground) is not necessary here, as it focuses on fine-tuning models, not adjusting templates directly.

* Option C (Reverting to the standard template) does not solve the issue of customizing the prompt template.

For more information, refer to Prompt Builder documentation on configuring hyperparameters in custom templates.

NEW QUESTION # 50

Universal Containers is very concerned about security compliance and wants to understand:

Which prompt text is sent to the large language model (LLM)

* How it is masked

* The masked response

What should the AI Specialist recommend?

- **A. Enable audit trail in the Einstein Trust Layer.**
- B. Review the debug logs of the running user.
- C. Ingest the Einstein Shield Event logs into CRM Analytics.

Answer: A

Explanation:

To address security compliance concerns and provide visibility into the prompt text sent to the LLM, how it is masked, and the masked response, the AI Specialist should recommend enabling the audit trail in the Einstein Trust Layer. This feature captures and logs the prompts sent to the large language model (LLM) along with the masking of sensitive information and the AI's response. This audit trail ensures full transparency and compliance with security requirements.

* Option A (Einstein Shield Event logs) is focused on system events rather than specific AI prompt data.

* Option B (debug logs) would not provide the necessary insight into AI prompt masking or responses.

For further details, refer to Salesforce's Einstein Trust Layer documentation about auditing and security measures.

NEW QUESTION # 51

Universal Containers (UC) wants to enable its sales team to get insights into product and competitor names mentioned during calls.

How should UC meet this requirement?

- **A. Enable Einstein Conversation Insights, enable sales recording, assign permission sets, and customize insights with up to 50 products.**
- B. Enable Einstein Conversation Insights, connect a recording provider, assign permission sets, and customize insights with up to 25 products.
- C. Enable Einstein Conversation Insights, assign permission sets, define recording managers, and customize insights with up to 50 competitor names.

Answer: A

Explanation:

To provide the sales team with insights into product and competitor names mentioned during calls, Universal Containers should:

* **Enable Einstein Conversation Insights:** Activates the feature that analyzes call recordings for valuable insights.

* **Enable Sales Recording:** Allows calls to be recorded within Salesforce without needing an external recording provider.

* **Assign Permission Sets:** Grants the necessary permissions to sales team members to access and utilize conversation insights.

* **Customize Insights:** Configure the system to track mentions of up to 50 products and 50 competitors, providing tailored insights relevant to the organization's needs.

Option C accurately reflects these steps. Option A mentions defining recording managers but omits enabling sales recording within Salesforce. Option B suggests connecting a recording provider and limits customization to 25 products, which does not fully meet UC's requirements.

References:

* Salesforce AI Specialist Documentation - Setting Up Einstein Conversation Insights: Provides instructions on enabling conversation insights and sales recording.

* Salesforce Help - Customizing Conversation Insights: Details how to customize insights with up to 50 products and competitors.

* Salesforce AI Specialist Exam Guide: Outlines best practices for implementing AI features like Einstein Conversation Insights in a sales context.

NEW QUESTION # 52

Northern Trail Outfitters (NTO) wants to configure Einstein Trust Layer in its production org but is unable to see the option on the Setup page.

After provisioning Data Cloud, which step must an AI Specialist take to make this option available to NTO?

- A. Turn on Einstein Copilot.
- **B. Turn on Einstein Generative AI.**
- C. Turn on Prompt Builder.

Answer: B

Explanation:

For Northern Trail Outfitters (NTO) to configure the Einstein Trust Layer, the Einstein Generative AI feature must be enabled. The Einstein Trust Layer is closely tied to generative AI capabilities, ensuring that AI-generated content complies with data privacy, security, and trust standards.

Option A (Turning on Einstein Copilot) is unrelated to the setup of the Einstein Trust Layer, which focuses more on generative AI interactions and data handling.

Option C (Turning on Prompt Builder) is used for configuring and building AI-driven prompts, but it does not enable the Einstein Trust Layer.
