- A. Enable SSL decryption for known malicious source IP addresses
- B. Enable SSL decryption for source users and known malicious URL categories
- C. Enable SSL decryption for known malicious destination IP addresses
- D. Enable SSL decryption for malicious source users

Answer: B

NEW QUESTION # 49

Which statement accurately describes service routes and virtual systems?

- A. Virtual systems cannot have dedicated service routes configured: and virtual systems always use the global service and service route settings for the firewall
- B. Virtual systems can only use one interface for all global service and service routes of the firewall
- C. The interface must be used for traffic to the required external services
- **D. Virtual systems that do not have specific service routes configured inherit the global service and service route settings for the firewall**

Answer: D

Explanation:

"When a firewall is enabled for multiple virtual systems, the virtual systems inherit the global service and service route settings." So you can define specific service routes if you want, but they start out as inherited from the global settings.

NEW QUESTION # 50

Which tool provides an administrator the ability to see trends in traffic over periods of time, such as threats detected in the last 30 days?

- A. Session Browser
- B. TCP Dump
- **C. Application Command Center**
- D. Packet Capture

Answer: C

Explanation:

The Application Command Center (ACC) page visually depicts trends and a historic view of traffic on your network. It displays the overall risk level for all network traffic, the risk levels and number of threats detected for the most active and highest-risk applications on your network, and the number of threats detected from the busiest application categories and from all applications at each risk level. The ACC can be viewed for the past hour, day, week, month, or any custom- defined time frame.
