ISACA Certified Cybersecurity Operations Analyst Sample Questions (Q35-Q40):

NEW QUESTION # 35

An organization moving its payment card system into a separate location on its network (or security reasons) is an example of network:

- A. encryption.
- B. segmentation.
- C. redundancy.
- D. centrality.

Answer: B

Explanation:

The act of moving a payment card system to a separate network location is an example of network segmentation because:

- * Isolation for Security: Segregates sensitive systems from less secure parts of the network.
- * PCI DSS Compliance: Payment card data must be isolated to reduce the scope of compliance.
- * Minimized Attack Surface: Limits exposure in case other parts of the network are compromised.
- * Enhanced Control: Allows for tailored security measures specific to payment systems.

Other options analysis:

- * A. Redundancy: Involves having backup systems, not isolating networks.
- * C. Encryption: Protects data but does not involve network separation.

* D. Centricity: Not a recognized concept in network security.

CCOA Official Review Manual, 1st Edition References:

* Chapter 7: Network Segmentation and Isolation: Emphasizes segmentation for protecting sensitive data.

* Chapter 9: PCI Compliance Best Practices: Discusses network segmentation to secure payment card environments.

NEW QUESTION # 36

Which of the following is the core component of an operating system that manages resources, implements security policies, and provides the interface between hardware and software?

- **A. Kernel**
- B. Application
- C. Library
- D. Shell

Answer: A

Explanation:

The kernel is the core component of an operating system (OS) responsible for:

* Resource Management: Manages CPU, memory, I/O devices, and other hardware resources.

* Security Policies: Enforces access control, user permissions, and process isolation.

* Hardware Abstraction: Acts as an intermediary between the hardware and software, providing low-level device drivers.

* Process and Memory Management: Handles process scheduling, memory allocation, and inter-process communication.

Incorrect Options:

* B. Library: A collection of functions or routines that can be used by applications, not the core of the OS.

* C. Application: Runs on top of the OS, not a part of its core functionality.

* D. Shell: An interface for users to interact with the OS, but not responsible for resource management.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 4, Section "Operating System Security," Subsection "Kernel Responsibilities" - The kernel is fundamental to managing system resources and enforcing security.

- **A. Public cloud**
- B. Community cloud
- C. Hybrid cloud
- D. Private cloud

Explanation:

A public cloud is intended to be accessible over the Internet by multiple organizations with varying needs and requirements:

* Multi-Tenancy: The same infrastructure serves numerous clients.

* Accessibility: Users can access resources from anywhere via the Internet.

* Scalability: Provides flexible and on-demand resource allocation.

* Common Providers: AWS, Azure, and Google Cloud offer public cloud services.

Incorrect Options:

* A. Hybrid cloud: Combines private and public cloud, not primarily public.

* B. Community cloud: Shared by organizations with common concerns, not broadly public.

* D. Private cloud: Exclusive to a single organization, not accessible by many.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 3, Section "Cloud Deployment Models," Subsection "Public Cloud Characteristics" - Public clouds are designed for use by multiple organizations via the Internet.

- **B. minimum capabilities for protecting public interests are in place.**
- C. security teams understand which capabilities are most important for protecting organization.
- D. system vulnerabilities are mitigated in a timely manner.

Answer: B

Explanation:

Compliance requirements are imposed on organizations to ensure that they meet minimum standards for protecting public interests.

* Regulatory Mandates: Many compliance frameworks (like GDPR or HIPAA) mandate minimum data protection and privacy measures.

* Public Safety and Trust: Ensuring that organizations follow industry standards to maintain data integrity and confidentiality.

* Baseline Security Posture: Establishes a minimum set of controls to protect sensitive information and critical systems.

Incorrect Options:

* A. System vulnerabilities are mitigated: Compliance does not directly ensure vulnerability management.

* B. Security teams understand critical capabilities: This is a secondary benefit but not the primary purpose.

* C. Rapidly changing threats are addressed: Compliance often lags behind new threats; it's more about maintaining baseline security.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 9, Section "Compliance and Legal Considerations," Subsection "Purpose of Compliance" - Compliance frameworks aim to ensure that organizations implement minimum protective measures for public safety and data protection.

- **A. It allows for centralized security management and control.**
- B. It simplifies network topology and reduces complexity.
- C. It Improves security monitoring and alerting capabilities.
- D. It provides greater scalability and flexibility for network devices.

Answer: A

Explanation:

Software-Defined Networking (SDN) centralizes network control by decoupling the control plane from the data plane, enabling:

* Centralized Management: Administrators can control the entire network from a single point.

* Dynamic Policy Enforcement: Security policies can be applied uniformly across the network.

* Real-Time Adjustments: Quickly adapt to emerging threats by reconfiguring policies from the central controller.

* Enhanced Visibility: Consolidated monitoring through centralized control improves security posture.

Incorrect Options:

* A. Simplifies network topology: This is a secondary benefit, not the primary security advantage.

* B. Greater scalability and flexibility: While true, it is not directly related to security.

* D. Improves monitoring and alerting: SDN primarily focuses on control, not monitoring.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 5, Section "Software-Defined Networks," Subsection "Security Benefits" - SDN's centralized control model significantly enhances network security management.
