#### NEW QUESTION 21

A company that tracks medical devices wants to migrate its existing storage solution to the AWS Cloud. The company equips all of its devices with sensors that collect location and usage information. The sensor data is sent in unpredictable patterns with large spikes. The data is stored in a MySQL database running on premises at each hospital. The company wants the cloud storage solution to scale with usage. The company's analytics team uses the sensor data to calculate usage by device type and hospital. The team needs to keep analysis tools running locally while fetching data from the cloud. The team also needs to use existing Java application and SQL queries with as few changes as possible. How should a solutions architect meet these requirements while ensuring the sensor data is secure?

- A. Store the data in an Amazon S3 bucket. Serve the data through Amazon Athena using AWS PrivateLink to secure the data in transit.
- B. Store the data in an Amazon S3 bucket. Serve the data through Amazon QuickSight using an IAM user authorized with AWS Identity and Access Management (IAM) to access the S3 bucket as the data source.
- C. Store the data in an Amazon Aurora Serverless database. Serve the data through an Amazon Network Load Balancer (NLB). Authenticate users using the NLB with credentials stored in AWS Secrets Manager.
- D. Store the data in an Amazon Aurora Serverless database. Serve the data through the Aurora Data API using an IAM user authorized with AWS IAM and Access Management (IAM) and the AWS Secrets Manager ARN.

Answer: B

#### NEW QUESTION 22

A retail company needs to provide a series of data files to another company, which is its business partner. These files are saved in an Amazon S3 bucket under Account A, which belongs to the retail company. The business partner company wants one of its IAM users
