Our worldwide after sale staff will be online for 24/7 and reassure your rows of doubts on our 1Z0-1055-25 exam questions as well as exclude the difficulties and anxiety with all the customers. Just let us know your puzzles and we will figure out together. You can contact with us at any time and we will give you the most professional and specific suggestions on the 1Z0-1055-25 Study Materials. What is more, you can free download the demos of the 1Z0-1055-25 learning guide on our website to check the quality and validity.

Oracle 1Z0-1055-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Implementing Payments: This section of the exam measures skills of Payments Configuration Specialists and focuses on the payment lifecycle in the Oracle Fusion Payables module. It includes understanding the supplier payment process, AI role in automation, and the configuration of payment options, methods, disbursement choices, and process profiles. The section also involves managing approval workflows and payment process templates for secure and accurate disbursement management.
Topic 2	<ul style="list-style-type: none">Implementing Supplier Invoices: This section of the exam measures skills of Financial Systems Specialists and covers the setup and processing of supplier invoices. It focuses on understanding supplier invoice processing, AI-assisted automation, and key configurations such as invoice options, distribution sets, tolerances, holds, approvals, and release procedures. Candidates also learn how to manage business rules for invoice validation and processing efficiency.
Topic 3	<ul style="list-style-type: none">Setting up Common Configurations in the Supplier Invoice to Payments Process This section of the exam measures skills of Accounts Payable Analysts and focuses on understanding the core setup required for supplier invoicing and payment processes. It covers the Enterprise Structure, Financial Reporting Structure, and Data Security model. Candidates must know the purpose of Business Units and Reference Sets and be able to manage Supplier and Bank Account Master Data effectively.
Topic 4	<ul style="list-style-type: none">Implementing Expenses: This section of the exam measures skills of Expense Management Administrators and focuses on managing and configuring employee expense processes. It includes expense report processing, approval rules, and audit policies. Candidates must understand system configurations for templates, corporate card programs, conversion rate policies, travel integration, and AI-driven automation in expense management.
Topic 5	<ul style="list-style-type: none">Implementing Accounts Payable Balances: This section of the exam measures skills of Finance Operations Managers and covers Accounts Payable (AP) reporting, analysis, and period closing activities. It explains AP balance configurations, calendar management, and reconciliation with the General Ledger. Candidates must understand the setup of aging periods, payables calendars, and best practices for ensuring accurate financial close processes.

Financials: Payables and Expenses 2025 Implementation Professional - Latest New 1Z0-1055-25 Test Blueprint

Dumpleader is a leading platform in this area by offering the most accurate 1Z0-1055-25 exam questions to help our customers to pass the exam. And we are grimly determined and confident in helping you. With professional experts and brilliant teamwork, our 1Z0-1055-25 practice materials have helped exam candidates succeed since the beginning. To make our 1Z0-1055-25 simulating exam more precise, we do not mind splurge heavy money and effort to invite the most professional teams into our group.

Oracle Fusion Cloud Financials: Payables and Expenses 2025 Implementation Professional Sample Questions (Q25-Q30):

NEW QUESTION # 25

An installment meets all the selection criteria of a Payment Process Request, but it still does not get selected for payment processing. What are the two reasons for this?

- A. The invoice needs re-validation.
- B. The pay-through date is in a closed Payables period.
- C. The invoice requires approval.
- D. The invoice has not been accounted.
- E. The pay-through date is in a future period.

Answer: A,C

Explanation:

Comprehensive and Detailed In-Depth

In Oracle Financials Cloud, even when an installment meets the selection criteria of a Payment Process Request (PPR), certain conditions can prevent it from being selected for payment processing. Understanding these conditions is crucial for troubleshooting and ensuring a smooth payment workflow.

Analysis of Each Option:

A . The pay-through date is in a future period.

The pay-through date in a PPR determines the latest due date of invoices to be included for payment. Setting this date in the future is a common practice to include all invoices due up to that date. Therefore, having a pay-through date in a future period would not prevent installments from being selected; instead, it broadens the selection criteria. This is not a reason for an installment not being selected.

B . The pay-through date is in a closed Payables period.

The pay-through date affects which invoices are selected based on their due dates, but it does not directly relate to the status of accounting periods. While processing payments in a closed period is not allowed, the pay-through date itself being in a closed period does not prevent installment selection. Therefore, this is not a valid reason for an installment not being selected.

C . The invoice needs re-validation.

Invoices that have undergone changes affecting their payment attributes may require re-validation. If an invoice is in a status indicating it needs re-validation, it will not be selected for payment processing until the validation process is successfully completed.

This ensures that all invoice data is accurate and meets the necessary criteria for payment. According to Oracle documentation, an installment might not get selected if "The invoice must be revalidated." docs.oracle.com D . The invoice requires approval.

Invoices often need to go through an approval workflow to ensure their legitimacy and accuracy. If an invoice has not received the necessary approvals, it remains in a pending status and is excluded from payment processing. Ensuring that all invoices are approved is essential for them to be selected in a PPR. The Oracle documentation states that an installment might not get selected if "The invoice requires approval." docs.oracle.com E . The invoice has not been accounted.

While accounting is a critical aspect of financial management, the accounting status of an invoice does not typically prevent it from being selected for payment. Invoices can be selected and paid even if they have not yet been accounted, with accounting entries being created subsequently. Therefore, the lack of accounting is not a reason for an installment not being selected in a PPR.

Conclusion:

The two primary reasons an installment, despite meeting selection criteria, might not be selected for payment processing are:

C . The invoice needs re-validation.

D . The invoice requires approval.

Ensuring that all invoices are validated and approved is essential for their inclusion in payment processing.

NEW QUESTION # 26

You have been asked by the cloud customer to create some user-defined account derivation rules for Payables invoices that were imported from lease accounting.

Which two lease accounting source attributes are predefined and can be used in rule creation?

- A. DFF values on the Schedule tab
- **B. ROU Flag value**
- C. Lease preparer
- D. Lease location
- **E. DFF values on the Asset tab**

Answer: B,E

Explanation:

Comprehensive and Detailed In-Depth

In Oracle Lease Accounting, integration with Oracle Payables allows for the seamless import of lease-related invoices. To ensure accurate financial reporting, it's essential to configure account derivation rules that map specific lease attributes to the appropriate general ledger accounts. Oracle provides a set of predefined source attributes that can be utilized in creating these rules.

Key Predefined Lease Accounting Source Attributes:

DFF Values on the Asset Tab (Option A):

Descriptive Flexfields (DFFs) on the Asset tab capture additional, user-defined information related to leased assets. These fields can store bespoke data pertinent to an organization's reporting requirements. When configuring account derivation rules, these DFFs can be referenced to derive specific accounting treatments based on the custom attributes recorded.

Reference:

ROU Flag Value (Option D):

The Right-of-Use (ROU) flag indicates whether an asset is recognized as a right-of-use asset under lease accounting standards. This distinction is crucial for determining the appropriate accounting treatment for lease-related transactions. In account derivation rules, the ROU flag can be used to route transactions to the correct accounts, ensuring compliance with accounting standards.

Other Options Analysis:

DFF Values on the Schedule Tab (Option B):

While Descriptive Flexfields on the Schedule tab may capture additional information related to payment schedules, they are not explicitly listed among the predefined source attributes available for account derivation rule creation in Oracle Lease Accounting.

Lease Preparer (Option C):

The individual who prepares the lease (Lease Preparer) is not a predefined source attribute available for configuring account derivation rules. Accounting rules typically rely on attributes directly impacting financial transactions rather than user-specific data.

NEW QUESTION # 27

You have enabled Payment Approval for your Payment Process Requests (PPR). At what stage of the PPR is the payment approval process automatically triggered?

- A. Review Installments
- B. Build Payments
- **C. Review Proposed Payments**
- D. Create Payment Files

Answer: C

Explanation:

Comprehensive and Detailed In-Depth

In Oracle Financials Cloud, the Payment Process Request (PPR) undergoes several stages, each with specific functions and potential user interventions. When Payment Approval is enabled, the system incorporates an approval workflow to ensure that payments are reviewed and authorized before disbursement.

Stages of Payment Process Request:

Installment Selection:

Description: The system selects invoice installments based on predefined criteria such as due dates, payment methods, and supplier information.

User Action: Optional review if the "Review Installments" option is selected.

Document Validation:

Description: Validates the selected installments for completeness and correctness, ensuring all necessary information is present.

User Action: Required if there are validation errors or missing information.

Build Payments:

Description: Groups validated installments into payments based on attributes like payment date, disbursement bank account, and payment method.

User Action: None, this is an automated process.

Review Proposed Payments:

Description: Allows users to review and, if necessary, modify the proposed payments before finalizing them.

User Action: Required if the "Review Proposed Payments" option is selected.

Payment Approval:

Description: If enabled, this stage involves routing the proposed payments to designated approvers for authorization before disbursement.

User Action: Approvers must review and approve or reject the payments.

Create Payment Files:

Description: Generates the necessary payment files for disbursement, such as electronic funds transfer (EFT) files or check print files.

User Action: None, unless issues arise during file creation.

Trigger Point for Payment Approval:

The Payment Approval process is automatically triggered at the Review Proposed Payments stage. At this point, the system pauses to allow approvers to review the proposed payments and make decisions regarding their authorization. This control mechanism ensures that all payments are vetted before funds are disbursed, aligning with organizational policies and financial controls.

According to Oracle's documentation:

"If enabled, the payment process stops at the Review Proposed Payments stage. Approvers can then optionally remove payments directly from a payment process request and approve it." docs.oracle.com Analysis of Options:

A . Review Proposed Payments: Correct. This is the stage where the payment approval process is triggered, allowing approvers to review and authorize payments.

B . Create Payment Files: Incorrect. This stage occurs after payment approval and involves generating the actual payment files for disbursement.

C . Review Installments: Incorrect. This is an earlier stage where selected installments are reviewed before payments are built, but it does not involve the payment approval workflow.

D . Build Payments: Incorrect. This stage involves grouping validated installments into payments and occurs before the Review Proposed Payments stage.

Conclusion:

Enabling Payment Approval in Oracle Financials Cloud introduces a critical control point at the Review Proposed Payments stage of the Payment Process Request. This setup ensures that all proposed payments undergo managerial review and authorization before the creation of payment files and the actual disbursement of funds. Implementing this approval process helps maintain robust financial oversight and compliance within the organization's payment workflows.

NEW QUESTION # 28

You have assisted your customer with the implementation of Oracle Intelligent document Recognition (IDR). They want to track the accuracy of the invoice line recognition for invoices processed by IDR. You introduce them to the invoice documents recognition rate report to obtain the invoice line recognition details.

In which three formats is this report available?

- A. Invoice Header summary
- B. Invoice Header supplier summary
- C. Invoice Line Summary
- D. Invoice Summary Details
- E. Invoice Line Details
- F. Invoice Header Details

Answer: B,C,F

NEW QUESTION # 29

You are an Expenses Manager at a large company and need to address complaints from your corporate card provider about

delayed transaction payments incurred by former employees who are now inactive. To ensure timely and efficient processing of valid business charges posted to an inactive employee's corporate credit card, you can run the following two processes: Upload Corporate Card Transactions and Process Corporate Card Transactions for Inactive Employees. Which two are capabilities included in these processes?

- A. Outstanding Cash Advances
- B. Grace Period
- C. Employee Termination Date
- D. Individual Pay Liability

Answer: B,C

Explanation:

Comprehensive and Detailed In-Depth

In Oracle Financials Cloud, managing corporate card transactions for inactive employees is crucial to maintain timely payments and avoid disputes with card providers. The processes Upload Corporate Card Transactions and Process Corporate Card Transactions for Inactive Employees are designed to handle such scenarios effectively.

Key Capabilities of These Processes:

Employee Termination Date (Option A):

Role in Processing: The system identifies inactive employees based on their termination or inactive status. When the Process Corporate Card Transactions for Inactive Employees process is executed, it scans for employees whose status has changed to inactive (e.g., due to termination or unpaid leave) and identifies any outstanding corporate card transactions associated with them.

Reference:

Grace Period (Option D):

Role in Processing: A grace period can be configured to allow the system to process transactions that are posted after an employee's termination date. This ensures that any legitimate business expenses incurred shortly before termination are not overlooked. The default grace period is set to 0 days but can be adjusted as needed.

Configuration Path: To modify the grace period, navigate to the Manage Expenses System Options page:

In the Setup and Maintenance work area, select:

Offering: Financials

Functional Area: Expenses

Task: Manage Expenses System Options

Options Not Included:

Outstanding Cash Advances (Option B):

This pertains to any cash amounts advanced to employees that have not yet been reconciled. The processes in question focus on corporate card transactions and do not directly address outstanding cash advances.

Individual Pay Liability (Option C):

This refers to scenarios where employees are responsible for paying their corporate card bills directly (Individual Pay). The processes mentioned are designed to handle transactions for inactive employees, regardless of the payment liability setup (Individual Pay, Company Pay, or Both Pay).

By utilizing these processes and configuring the grace period appropriately, companies can ensure that all valid business expenses incurred by inactive employees are processed efficiently, thereby maintaining good standing with corporate card providers and ensuring accurate financial reporting.

How Corporate Card Transactions for Inactive Employees Are Processed

NEW QUESTION # 30
