## NCP-DB-6.10 Exam Cram Review - Simulations NCP-DB-6.10 Pdf

Lead1Pass almost aimed to meet the needs of all candidates who want to pass the NCP-DB-6.10 exam. If someone who don't have enough time to prepare for their exam, our website provide they with test answers which only need 20-30 hours to grasp; If someone who worry about failed the NCP-DB-6.10 Exam, our website can guarantee that they can get full refund. In summary, the easiest way to prepare for NCP-DB-6.10 certification exam is to complete NCP-DB-6.10 study material.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q80-Q85):

### NEW QUESTION # 80

An administrator has deployed an NDB HA setup. An electrical maintenance window needs to be planned and the clusters where NDB is deployed must be powered off. After shutting down the load balancer server, what should the administrator do next?

- A. In the sudo systemctl stop patroni command.
- **B. Shutdown the API standby node.**
- C. Run the high-availability list command.
- D. Shutdown the API leader node.

**Answer: B**

Explanation:

In an NDB HA (High Availability) setup, when planning an electrical maintenance window requiring the clusters hosting NDB to be powered off, the administrator must follow a controlled shutdown sequence to preserve data integrity and minimize disruption. After shutting down the load balancer server (HAProxy), the next step is to shut down the API standby node. In an NDB HA configuration, the API leader node handles active operations, while the standby node provides redundancy. Shutting down the standby node first ensures the leader remains operational, allowing ongoing management tasks to continue until the final shutdown of the leader node.

### NEW QUESTION # 81

A developer with RBAC privileges in Era needs to refresh an existing DB Clone. What steps must the developer take to perform the refresh?

- A. Navigate to Time Machines Select the appropriate Database Time Machine from the table and Refresh Clone from the Actions menu.
- B. Navigate to Databases > Clones, Select the appropriate clone from the table, choose
- **C. Navigate to Databases > Clones, Select the appropriate clone from the table, click Refresh, select the desired Point In Time or Snapshot and click Refresh**
- D. Navigate to Databases > Sources, Select the appropriate Database from the table and Refresh Clone from the Database Actions menu.

**Answer: C**

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, to refresh an existing DB Clone, a developer with RBAC privileges in Era needs to navigate to Databases > Clones. From there, they select the appropriate clone from the table, click Refresh, select the desired Point In Time or Snapshot, and then click Refresh. This process allows the developer to update the cloned database.

### NEW QUESTION # 82

A customer has NDB configured to create snapshots of their production databases every 4 hours.

A developer requires a copy of the current production data at 7:00am of each day. What is the most efficient way to meet this requirement?

- A. Run a script which creates a clone from the latest snapshot at 7:00am.
- **B. Configure Time Machine to create a clone from a daily snapshot at 7:00am.**
- C. Authorize the developer in RBAC to create clones as required.
- D. Configure a cron job with a daily Data Refresh Schedule at 7:00am.

**Answer: B**

Explanation:

Time Machine is a feature of Nutanix Era that allows you to create and manage snapshots of your databases. You can use Time Machine to create clones from any snapshot, either manually or automatically. You can also configure Time Machine to create clones from snapshots based on a schedule, such as daily, weekly, or monthly. This way, you can ensure that your clones are always up to date with the latest data from your production databases. In this scenario, the most efficient way to meet the developer's requirement is to configure Time Machine to create a clone from a daily snapshot at 7:00am. This will save the developer's time and effort, as well as reduce the storage consumption by using the existing snapshots.

### NEW QUESTION # 83

Which disk is omitted from a Software Profile?

- A. User Database
- B. System Database
- C. SQL Installation
- **D. System Page File**

**Answer: D**

Explanation:

According to the Nutanix Database Automation (NCP-DB) course, a Software Profile is a template that defines the configuration of the database engine, such as the version, edition, features, and parameters. It also specifies the disk layout for the database installation, such as the size, type, and mount point of each disk. However, the System Page File disk is omitted from the Software Profile, as it is automatically created by the NDB service based on the memory size of the database server VM. The other options are included in the Software Profile, as they are essential for the database operation and performance.

### NEW QUESTION # 84

While registering an Always on Availability Group database, an administrator selects the following option:  
Multiple Databases as a Group with One Time Machine

Which statement is true regarding this chosen option?

- A. PITR-based SLAs are not supported for database groups.
- **B. PITR-based SLAs are not supported for database groups containing mixed Recovery Model**
- C. PITR-based SLAs are supported for database groups containing mixed Recovery Model.
- D. Point in Time Clones are not supported by Database Groups.

**Answer: B**

Explanation:

Nutanix Database Automation (NCP-DB) introduces the concept of MS SQL Server database groups, which allows multiple databases running in the same database instance to be grouped as one Time Machine entity. This applies to both single DB Server VM setups, standalone databases, as well as to Availability Group databases. However, it does not support Point In Time Recovery (PITR)-based Service Level Agreements (SLAs) for database groups containing mixed Recovery Models. This means that if the databases within the group have different recovery models, PITR-based SLAs cannot be applied to the group as a whole.

### NEW QUESTION # 85

.....

After the user has purchased our NCP-DB-6.10 learning materials, we will discover in the course of use that our product design is extremely scientific and reasonable. Details determine success or failure, so our every detail is strictly controlled. For example, our learning material's Windows Software page is clearly, our NCP-DB-6.10 Learning material interface is simple and beautiful. There are no additional ads to disturb the user to use the NCP-DB-6.10 qualification question. Once you have submitted your practice time, NCP-DB-6.10 study tool system will automatically complete your operation.
