Questions (Q24-Q29):

NEW QUESTION # 24

What is the primary use of the vsx_util delete command?

- A. Reset all policies
- B. Convert gateway back to standalone
- C. Uninstall Gaia OS
- **D. Remove VSX objects from the gateway and management**

Answer: D

Explanation:

vsx_util delete removes a Virtual System or other VSX object, including associated interface and routing configurations. It must be used carefully, as deleted objects cannot be recovered once committed.

NEW QUESTION # 25

What is the function of the vsx_util vsls command?

- A. Synchronizes routing tables
- **B. Shows how VSs are distributed across cluster members**
- C. Removes all VSs from a VSX cluster
- D. Displays log statistics per VS

Answer: B

Explanation:

vsx_util vsls displays the current load-sharing status of Virtual Systems across VSX cluster members when VSLS is enabled. This helps verify which node is active for each VS and is essential for performance analysis and failover planning.

NEW QUESTION # 26

Which statements are true about deploying a VSX Gateway in a data center? (Choose two)

- **A. Can be integrated with Layer 2/3 designs**
- **B. Supports interface bonding and VLAN tagging**
- C. Requires dedicated IP for each VS on the same VLAN
- D. Must use different VSX Gateways for each VLAN

Answer: A,B

Explanation:

VSX Gateways support advanced networking features like VLAN tagging and bonding, making them well-suited for data center environments. They integrate seamlessly into both Layer 2 and Layer 3 designs, supporting scalable, segmented architectures.

NEW QUESTION # 27

Which of the following are limitations of VSX Gateway Clustering compared to physical clusters? (Choose two)

- A. Requires dedicated sync interface
- **B. More complex configuration**
- **C. Requires centralized management**
- D. Cannot perform policy inspection

Answer: B,C

Explanation:

VSX clusters typically require more complex configuration due to their multi-tenant nature. They also rely heavily on centralized management (SmartConsole, VSX provisioning tools), whereas physical clusters can be managed more directly.
