Cisco DevNet Associate Exam Sample Questions (Q359-Q364):
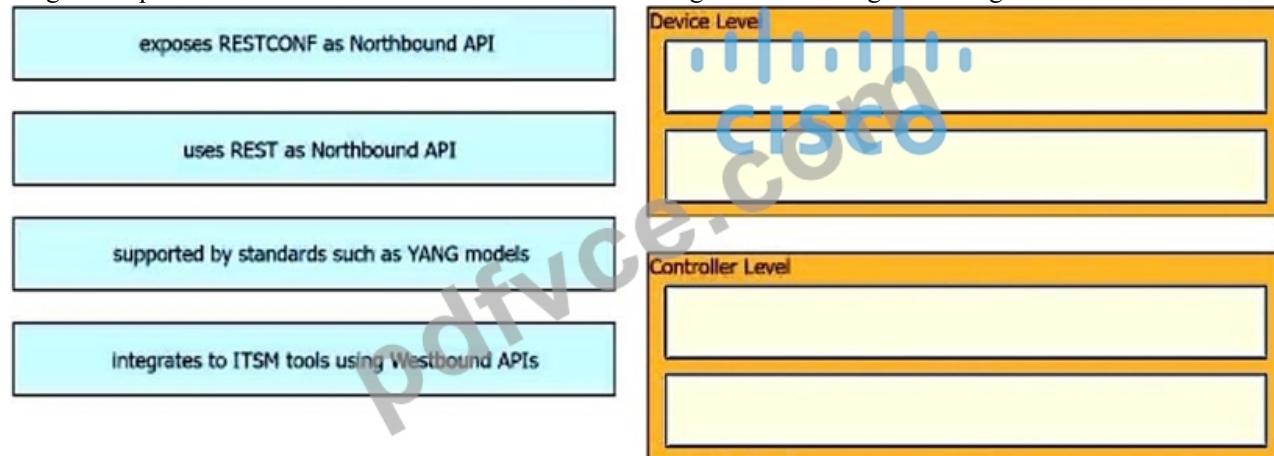

NEW QUESTION # 359
What is a benefit of test-driven development?

- A. increased code quality
- B. early customer involvement
- C. faster releases that have minimal features
- D. strict adherence to product requirements

Answer: D

NEW QUESTION # 360
Drag and drop characteristics from the left onto the infrastructure management methodologies on the right.

Answer:

Explanation:

NEW QUESTION # 361
Which RFC 1918 address space includes a subnet of 172.16.0.0 that uses a mask of 255.255.0.0?

- A. class D
- B. class C
- C. class B
- D. class A

Answer: C

Explanation:
RFC 1918 defines private IP address ranges for use within private networks. The address space 172.16.0.0 to 172.31.255.255 is designated as private and falls under class B.
Class B Address Space: The range 172.16.0.0 to 172.31.255.255 is a private IP address range designated for class B networks.
Subnet Mask: A subnet mask of 255.255.0.0 (/16) is commonly used within this range to create subnets.
Reference:
RFC 1918 Address Allocation: RFC 1918

NEW QUESTION # 362
A new application is being developed that must be hardware independent. The application includes an administrative component which is accessed using a Windows desktop GUI.
Installation and management of the environment must be fully automated. Which application deployment type meets the requirements?

- A. bare metal
- B. virtual Python environment
- C. container
- D. virtual machine

Answer: C

NEW QUESTION # 363
Drag and Drop Question
Refer to the exhibit. Drag and drop the code from the bottom onto the box where the code is missing to construct a request that generates a security token and gets a list of network devices.
Not all options are used.

Answer Area

```
import json, requests, urllib3
from requests.auth import HTTPBasicAuth
from config import host, username, password

headers = { 'content-type': "application/json", 'x-auth-token': "" }
def dna_api_auth(host, username, password):
    url = "https://{}/api/system/v1/auth/token".format(host)
    response = [                ] .post(url, auth=HTTPBasicAuth(username, password),
        headers=headers, verify=False)
    return response.json()["Token"]

def list_dna_devices(token):
    url = "https://{}/api/v1/network-device".format(host)
    headers["x-auth-token"] = token
    response = requests.get(url, headers=headers, verify=False)
    data = [                ] .json()
    for item in data['response']:
        print(item["hostname"])

token = [                ] (host, username, password)
[                ] (token)
```

response	reply	dna_api_auth	requests

json	list_dna_devices	list devices

Answer:

Explanation:

Answer Area

```
import json, requests, urllib3
