## ITIL-4-Practitioner-Release-Management Explanation

With precious time passing away, many exam candidates are making progress with high speed and efficiency with the help of our ITIL-4-Practitioner-Release-Management study guide. You cannot lag behind and with our ITIL-4-Practitioner-Release-Management preparation materials, and your goals will be easier to fix. So stop idling away your precious time and begin your review with the help of our ITIL-4-Practitioner-Release-Management learning quiz as soon as possible, and you will pass the exam in the least time.

### Peoplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q18-Q23):

#### NEW QUESTION # 18

An organization's project and operational teams are concerned that individual releases involve some unnecessary activities and are missing some important activities. What is the BEST action for the organization to take to improve this situation?

- A. Ensure that release management key metrics are integrated with metrics relating to deployment management and change enablement
- B. Introduce proactive communication channels for the service provider to make release management processes more efficient
- **C. Review current release models, create additional models where appropriate, and automate where possible**
- D. Automate the release management activities together with development activities

#### Answer: C

Explanation:

The concern about unnecessary and missing activities in releases points to issues with the release models being used. The ITIL 4 Practitioner: Release Management document advises: "To address inefficiencies in release processes, such as unnecessary or missing activities, organizations should review current release models, create additional models where appropriate to address gaps, and automate repetitive tasks to improve efficiency" (Section 3.2.2).

- \* Option A (Introduce proactive communication channels) improves stakeholder engagement but doesn't directly address the issue of unnecessary or missing activities.
- \* Option B (Review current release models, create additional models, and automate) directly tackles the problem by refining the release models to eliminate unnecessary activities, add missing ones, and enhance efficiency through automation.
- \* Option C (Integrate metrics with deployment and change enablement) focuses on performance measurement, not process improvement.
- \* Option D (Automate with development activities) addresses automation but doesn't specifically tackle the issue of refining release activities.

The correct answer is B, as it directly addresses the root cause by improving release models.

#### NEW QUESTION # 19

Which is a key input to the release planning and coordination process?

- **A. Details about the users who will be affected**
- B. Notifications to stakeholders about the release status
- C. Updates to the continual improvement register
- D. Documented findings on the success of a release

#### Answer: A

Explanation:

The release planning and coordination process in ITIL 4 Release Management requires inputs to ensure effective planning and execution of releases. The ITIL 4 Practitioner: Release Management document specifies: "Key inputs to release planning and coordination include details about the users who will be affected, as this helps in scheduling and communicating the release to minimize disruption" (Section 3.2.1).

- \* Option A (Documented findings on the success of a release) is an output of a release evaluation, not an input to planning.
- \* Option B (Updates to the continual improvement register) may inform long-term improvements but isn't a direct input to planning a specific release.
- \* Option C (Details about the users who will be affected) is a critical input, as understanding the user base helps tailor the release schedule, communication, and impact mitigation strategies.

\* Option D (Notifications to stakeholders about the release status) is an output of the release process, not an input to planning. The correct answer is C, as user details are essential for effective release planning and coordination.

#### NEW QUESTION # 20

A retail organization is hiring a new release manager. The vacancy description indicates that successful candidates should have good knowledge of technologies and platforms used by the organization, good knowledge of ITIL and DevOps, and experience in retail. What other skill is important to the release management role?

- A. Knowledge of service management frameworks
- B. Technical expertise
- **C. Project planning and coordination**
- D. Understanding of the organization's business

#### Answer: C

Explanation:

The release management role in ITIL 4 requires a range of competencies to ensure effective coordination and execution of releases. The ITIL 4 Practitioner: Release Management document states: "A release manager must have strong project planning and coordination skills to manage the scheduling, communication, and execution of releases, ensuring alignment with organizational goals and minimal disruption" (Section 3.3).

\* Option A (Knowledge of service management frameworks) is already covered by the requirement of ITIL knowledge in the vacancy description, so it's not an additional skill.

\* Option B (Project planning and coordination) is a critical skill for release managers, as they need to orchestrate complex release activities, manage timelines, and coordinate with stakeholders, which isn't explicitly covered by the listed requirements.

\* Option C (Technical expertise) is implied by the requirement for knowledge of technologies and platforms, so it's not an additional skill.

\* Option D (Understanding of the organization's business) is important but less specific to release management compared to project planning, and the retail experience requirement already covers business context.

The correct answer is B, as project planning and coordination is a key additional skill for effective release management.

#### NEW QUESTION # 21

A release manager has noticed that the organization has many standardized services provided to international organizations. Which aspect of release management will this situation directly affect?

- A. Continuous delivery
- B. The release plans
- C. Continuous integration
- **D. The release models**

#### Answer: D

Explanation:

Standardized services provided to international organizations imply a need for consistency and scalability in how releases are managed across diverse contexts. The ITIL 4 Practitioner: Release Management document explains that release models are used to standardize the approach to releases: "Release models define the structure, contents, and schedule of releases... They ensure consistent and repeatable processes, which is particularly important for organizations with standardized services" (Section 3.2.2).

\* Option A (The release plans) refers to specific plans for individual releases, which may be affected indirectly but are not the primary aspect impacted by standardization needs.

\* Option B (Continuous integration) and Option C (Continuous delivery) are development practices that may interact with release management but are not directly affected by the need for standardization across international services.

\* Option D (The release models) is directly affected, as standardized services require well-defined release models to ensure consistency, repeatability, and scalability across international contexts.

The situation directly impacts the design and application of release models to accommodate standardized services globally. Thus, the correct answer is D.

#### NEW QUESTION # 22

An organization has a dedicated release management team that is effective in managing releases, but this team has very poor

coordination with the change enablement team. What capability level of release management does this indicate?

- A. Level 4
- **B. Level 2**
- C. Level 3
- D. Level 1

**Answer: B**

Explanation:

The ITIL capability model evaluates not only the effectiveness of a practice but also its integration with other practices. The ITIL 4 Practitioner: Release Management document states: "Level 2 (Managed) indicates that the practice is effective in its own scope but may lack integration with other practices. Level 3 (Defined) requires standardized processes and effective coordination with related practices like change enablement" (Section 5.2).

\* The scenario shows that the release management team is effective (meeting Level 2), but poor coordination with the change enablement team indicates a lack of integration.

\* Level 1 (Ad-hoc) would mean no consistent process, which isn't the case here since the team is effective.

\* Level 3 requires integration and standardization across practices, which is not met due to poor coordination.

\* Level 4 is even more advanced, requiring quantitative management, which isn't applicable.

The capability level is B (Level 2), as the practice is effective but lacks the integration needed for Level 3.

## NEW QUESTION # 23

.....

The successful outcomes are appreciable after you getting our ITIL-4-Practitioner-Release-Management exam prep. After buying our ITIL-4-Practitioner-Release-Management latest material, the chance of gaining success will be over 98 percent. Many exam candidates ascribe their success to our ITIL-4-Practitioner-Release-Management real questions and become our regular customers eventually. Rather than blindly assiduous hardworking for amassing knowledge of computer, you can achieve success skillfully. They are masterpieces of experts who are willing to offer the most effective and accurate ITIL-4-Practitioner-Release-Management Latest Material for you.
