## CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q201-Q206):

### NEW QUESTION # 201

Which of the following types of storage provides the greatest performance advantage for a traditional relational database?

- A. File
- B. Object
- C. Ephemeral
- **D. Block**

**Answer: D**

Explanation:

Block storage provides the greatest performance advantage for traditional relational databases due to its high performance and low-latency characteristics. Block storage allows databases to rapidly manage data in fixed-sized blocks, which is ideal for databases that require frequent read/write operations.

Reference: Understanding different storage types and their use cases, including block storage for databases, is part of the cloud computing knowledge base covered in CompTIA Cloud+.

### NEW QUESTION # 202

An administrator received a report that company data has been compromised. The compromise occurred on a holiday, and no one in the organization was working. While reviewing the logs from the holiday, the administrator noted the following details:

The most appropriate action for the cloud security analyst to recommend is using CIS-hardened images. These images are pre-configured by the Center for Internet Security to provide security benchmark standards that help in mitigating vulnerabilities in publicly available container images. References: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Security Posture Which of the following accounts should the administrator disable to prevent a further breach?

- A. Human resources manager
- B. Cloud administrator
- C. Security engineer
- **D. Software developer**

**Answer: D**

Explanation:

Based on the provided log details, the account of the Software Developer was used to gain unauthorized access. This account should be disabled to prevent further breaches, especially considering no one from the organization was working during the holiday, suggesting a compromised account. References: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Security

### NEW QUESTION # 203

A company recently migrated to a public cloud provider. The company's computer incident response team needs to configure native cloud services for detailed logging. Which of the following should the team implement on each cloud service to support root cause analysis of past events? (Select two).

- A. Hashing
- **B. Log retention**
- C. Tracing
- **D. Log aggregation**
- E. Encryption
- F. Log rotation

**Answer: B,D**

Explanation:

For detailed logging to support root cause analysis of past events, the team should implement log retention to ensure logs are kept for the necessary amount of time and log aggregation to compile logs from various sources for easier analysis and correlation. References: Log management practices, including retention and aggregation, are part of the cloud management strategies covered in the CompTIA Cloud+ curriculum, particularly in the domain of technical operations.

#### NEW QUESTION # 204

A company has decided to adopt a microservices architecture for its applications that are deployed to the cloud. Which of the following is a major advantage of this type of architecture?

- A. Reduced server cost
- B. Simplified communication
- C. Increased security
- D. Rapid feature deployment

**Answer: D**

Explanation:

A major advantage of adopting a microservices architecture is rapid feature deployment. Microservices allow for independent development, deployment, and scaling of individual service components, enabling teams to bring new features to market more quickly and efficiently compared to monolithic architectures. References:

The CompTIA Cloud+ certification covers cloud design aspects, including architectural models like microservices, emphasizing their role in facilitating agile development practices and rapid feature release cycles in cloud environments.

#### NEW QUESTION # 205

A cloud engineer must update the company's code repository, which is running on a VM, to the latest version.

The engineer downloads and runs the latest update, which appears to be successful. Which of the following steps should the engineer take next?

- A. Back up the repository.
- B. Test the repository functionality.
- C. Decommission the repository.
- D. Restore the repository.

**Answer: B**

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation from CompTIA Cloud CV0-004 Study guide and objectives:

After applying an update—even if it "appears" successful—the next step is validation. In CompTIA Cloud+ (CV0-004) operational procedures, change management and maintenance activities require post-change verification to confirm the service is functioning as intended and that no regressions were introduced. For a code repository running on a VM, this includes confirming the repository service starts correctly, users can authenticate, read/write operations work, hooks/integrations function, and logs show no errors. This step also supports incident prevention and rapid rollback decision-making if issues are detected.

Option A (Back up the repository) is typically performed before making changes to protect against failed updates. Option C (Restore the repository) is only appropriate if testing reveals a failure or corruption and recovery is needed. Option B (Decommission the repository) is unrelated to a routine upgrade. Therefore, the most correct immediate action after the update is to test repository functionality to ensure availability, integrity, and expected operational behavior.
