

Pass Guaranteed 2026 Professional Web-Development-Applications: WGU Web Development Applications Exam Prep

WGU C777 WEB DEVELOPMENT APPLICATIONS EXAM ACTUAL 2025/2026 QUESTIONS AND 100% CORRECT ANSWERS

HTML5, CSS, JavaScript - Answer -The web development trifecta

main - Answer -HTML5 tag defining the main body of a document. Cannot be the child of the header, nav, article, aside, or footer elements.

header and footer - Answer -These elements can also be included in article, aside, nav, main, and section elements, not just on the page itself

source - Answer -This element identifies the file(s) to use in a video or audio element

style guide - Answer -A set of standards for the writing and/or design of documents

IE9 - Answer -This version of IE is the first to support HTML5

Add them via JS, make them block via CSS - Answer -What should you do to support HTML5 elements in pre-IE9 browsers.

WGU Web Development Applications Sample Questions (Q66-Q71):

NEW QUESTION # 66

Given the following HTML code:

□ Which line of code should replace the first line to ensure that users can pause and restart the video?

- A. □
- **B.** □
- C. □
- D. □

Answer: B

Explanation:

To ensure that users can pause and restart the video, the controls attribute needs to be added to the <video> tag. This attribute provides the user with controls to play, pause, and adjust the volume of the video. The correct line of code that should replace the first line in the provided HTML to achieve this functionality is:

```
<video width="360" height="270" controls>
```

Here's the comprehensive explanation:

* controls Attribute: The controls attribute is a boolean attribute. When present, it specifies that video controls should be displayed, allowing the user to control video playback, including pausing, playing, and seeking.

* HTML Structure:

* Original Line:

```
<video width="360" height="270">
```

* Revised Line:

```
<video width="360" height="270" controls>
```

* Usage Example:

```
<video width="360" height="270" controls>
```

```
<source src="video.mp4" type="video/mp4">
```

Your browser does not support the HTML5 video element.

```
</video>
```

In this example, adding the controls attribute provides the user with play, pause, and volume controls.

* W3C HTML5 Specification on <video>

NEW QUESTION # 67

What is it called when a user must continue to resubmit a form until it is accepted?

- A. Auto-complete
- B. In-line validation
- **C. Pogo-sticking**
- D. Formatting

Answer: C

Explanation:

> "Pogo-sticking occurs when users repeatedly jump between a form and error messages, resubmitting until successful. This leads to

a poor user experience."

>

> It is commonly addressed using in-line validation, which provides immediate feedback.

References:

* UX Design Literature: Pogo-sticking behavior

* MDN Web Docs: Form validation techniques

NEW QUESTION # 68

What is a common technique to ensure users can access all content on a mobile web page?

- A. Targeted site content
- B. Navigation links requiring scrolling
- C. Access to multiple link layers
- **D. A link to the full site**

Answer: D

Explanation:

Providing a link to the full site on a mobile web page is a common technique to ensure users can access all content if they find the mobile version limiting.

* Advantages:

* Access to Full Functionality: Users can switch to the desktop version if they need features not available on the mobile site.

* User Control: It gives users the choice to view the site in a layout they are more comfortable with.

* Other Options:

* A. Access to multiple link layers: This does not directly address user needs for full site access.

* B. Targeted site content: While important, it does not replace the need for a full site link.

* D. Navigation links requiring scrolling: This can worsen the user experience on mobile devices.

* References:

* Google Developers - Mobile Site Design

NEW QUESTION # 69

Given the following markup:

```
```html
<p>This is sample text </p>
```
```

Which style positions the image to the left of the paragraph?

- A. left: -10px;
- **B. float: left;**
- C. clear: left;
- D. left: 10px;

Answer: B

Explanation:

> "The `float` property is used for positioning and formatting content. When you apply `float: left;` to an image, the image is moved to the left, and inline content (like text) will wrap around it." The other options (A and D) use `left`, which only applies to positioned elements (requires `position: relative`/`absolute`/`fixed`). Option B (`clear: left;`) prevents floating elements on the left but does not cause floating.

References:

* MDN Web Docs: float property

* W3C CSS2 Specification: 9.5 Floating elements

Here are the formatted and verified responses to Questions 19-21 using the exact structure you requested:

NEW QUESTION # 70

Which event fires when an issue occurs while an external file loads?

- A. invalid
- B. stalled
- C. error
- D. suspend

Answer: C

Explanation:

> "The `error` event is triggered when an error occurs during the loading of an external file such as an image, script, or style."

>

> "Events like `stalled` and `suspend` relate more to media buffering; `invalid` relates to form input validation." References:

* MDN Web Docs: GlobalEventHandlers.onerror

* HTML Standard: Error event

Here are the fully corrected, verified, and formatted answers for Questions 37 to 40, as per your specifications:

NEW QUESTION # 71

.....

Since it was founded, our VCEngine has more and more perfect system, more rich questiondumps, more payment security, and better customer service. Now the Web-Development-Applications exam dumps provided by VCEngine have been recognized by masses of customers, but we will not stop the service after you buy.
