# CyberArk Defender - PAM Sample Questions (Q25-Q30):

**NEW QUESTION # 25**
Arrange the steps to restore a Vault using PARestore for a Backup in the correct sequence.

**Answer:**

Explanation:

**NEW QUESTION # 26**
Your customer, ACME Corp, wants to store the Safes Data in Drive D instead of Drive C.
Which file should you edit?

- A. TSparm.ini
- B. user.ini
- C. Vault.ini
- D. DBparm.ini

**Answer: A**

Explanation:
Explanation
To store the Safes Data in a different drive, such as moving from Drive C to Drive D, you need to edit the TSparm.ini file. This file contains various parameters that configure the behavior of the Vault, including the location of the Safes Data. By editing the SafesDirectory parameter in the TSparm.ini file, you can specify a new path for the Safes Data, effectively changing the storage location to the desired drive1.
References:
* CyberArk's official documentation on managing files and documents, which includes information on how to store files in different locations within the Vault2.
* Knowledge articles on how to move the PSMRecordings safe or other Vault data to a different drive, which provide step-by-step instructions and mention the TSparm.ini file1

**NEW QUESTION # 27**
How much disk space do you need on the server for a PAReplicate?

- A. same as disk size on Satellite Vault
- B. 500 GB
- C. same as disk size on Primary Vault
- D. 1 TB

**Answer: C**

Explanation:
Explanation
The PAReplicate utility exports the Safe files from the CyberArk Vault to a computer on the local network where the Backup utility has been installed. The Safes are copied in a similar format and structure to the one in the Server. Therefore, the disk space required on the server for a PAReplicate is the same as the disk size on the Primary Vault1. References: Use the CyberArk Backup Process

**NEW QUESTION # 28**
Which Automatic Remediation is configurable for a PTA detection of a "Suspected Credential Theft"?

- A. Rotate Credentials
- B. Add to Pending
- C. Disable Account
- D. Reconcile Credentials

**Answer: A**

Explanation:
Explanation
For a Privileged Threat Analytics (PTA) detection of a "Suspected Credential Theft," the automatic remediation that can be configured is Rotate Credentials. This remediation action is designed to automatically initiate password changes when PTA identifies a suspected credential threat, such as a credential theft event. By rotating the credentials, CyberArk ensures that the potentially compromised credentials are changed, thus mitigating the risk of unauthorized access1.
References:
* CyberArk's official documentation on configuring PTA remediations, which includes information on automatic password rotation for suspected credential threats2.
* Additional details on the remediation actions that can be configured for different types of PTA detections, including Suspected Credential Theft1.

**NEW QUESTION # 29**
You notice an authentication failure entry for the DR user in the ITALog.
What is the correct process to fix this error? (Choose two.)

- A. PrivateArk Client > Tools > Administrative Tools > Users and Groups > DR User > Update > Authentication > Update Password.

- B. PVWA > User Provisioning > Users and Groups > DR User > Update Password.
- C. Create a new credential file, on the DR Vault, using the CreateCredFile utility and the newly set password.
  . Create a new credential file, on the Primary Vault, using the CreateCredFile utility and the newly set password.
- D. PrivateArk Client > Tools > Administrative Tools > Users and Groups > PAReplicate User > Update > Authentication > Update Password.

**Answer: A**

**NEW QUESTION # 30**

......
