

JN0-336 Test Discount, JN0-336 Actual Exam

For offline practice, our Security, Specialist (JNCIS-SEC) (JN0-336) desktop practice test software is ideal. This Security, Specialist (JNCIS-SEC) (JN0-336) software runs on Windows computers. The Security, Specialist (JNCIS-SEC) (JN0-336) web-based practice exam is compatible with all browsers and operating systems. No software installation is required to go through the web-based Security, Specialist (JNCIS-SEC) (JN0-336) practice test.

In modern society, whether to obtain JN0-336 certification has become a standard to test the level of personal knowledge. Many well-known companies require the JN0-336 certification at the time of recruitment. Whether you're a student or a white-collar worker, you're probably trying to get the certification in order to get more job opportunities or wages. If you are one of them, our JN0-336 Exam Guide will effectively give you a leg up.

Free PDF 2026 Juniper Pass-Sure JN0-336: Security, Specialist (JNCIS-SEC) Test Discount

You can install Juniper JN0-336 PRACTICE TEST file and desktop practice test software on your devices and easily start Security, Specialist (JNCIS-SEC) (JN0-336) exam preparation right now. Whereas the "ActualVCE" JN0-336 web-based practice test software is concerned, it is a simple browser-based application that works with all the latest web browsers. Just put the link of ActualVCE JN0-336 web-based practice test application in your browser and start Juniper JN0-336 exam preparation without wasting further time. The "ActualVCE" is quite confident that you will be the next successful Security, Specialist (JNCIS-SEC) exam candidate.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q48-Q53):

NEW QUESTION # 48

Exhibit

```
[edit security policies from-zone Trust to-zone Untrust]
user@srx# show
policy FindThreat {
    match {
        source-address any;
        destination-address any;
        application junos-defaults;
        dynamic-application [ junos:BITTORRENT junos:BITTORRENT-BUNDLE
junos:BITTORRENT-WEB-CLIENT ];
    }
    then {
        permit;
    }
}
[edit security policies from-zone Trust to-zone Untrust]
user@srx#
```

You are asked to track BitTorrent traffic on your network. You need to automatically add the workstations to the High_Risk_Workstations feed and the servers to the BitTorrent_Servers feed automatically to help mitigate future threats. Which two commands would add this functionality to the FindThreat policy? (Choose two.)

- A.

```
[edit security policies from-zone Trust to-zone Untrust policy FindThreat then permit application-
services security-intelligence]
user@srx# set add-source-identity-to-feed High_Risk_Workstations
```

- B.

```
[edit security policies from-zone Trust to-zone Untrust policy FindThreat then permit application-
services security-intelligence]
user@srx# set add-destination-identity-to-feed BitTorrent_Servers
```

- C.

```
[edit security policies from-zone Trust to-zone Untrust policy FindThreat then permit application-
services security-intelligence]
user@srx# set add-destination-ip-to-feed BitTorrent_Servers
```

- D.

```
[edit security policies from-zone Trust to-zone Untrust policy FindThreat then permit application-
services security-intelligence]
user@srx# set add-source-identity-to-feed High_Risk_Workstations
```

Answer: A,C

NEW QUESTION # 49

When a security policy is modified, which statement is correct about the default behavior for active sessions allowed by that policy?

- A. Only policy changes that involve modification of the application will cause the active sessions affected by the change to be dropped.
- B. Only policy changes that involve modification of the action field will cause the active sessions affected by the change to be dropped.
- C. The active sessions allowed by the policy will continue unchanged.
- D. The active sessions allowed by the policy will be dropped.

Answer: C

Explanation:

When you modify a security policy on the SRX Series device, the default behavior is that the existing sessions that match the policy will continue unchanged. This means that the policy modification will only affect new sessions that are initiated after the change. However, you can change this behavior by using the clear-policy-session command, which will clear all the sessions that match the

modified policy and force them to re-evaluate the new policy. Reference: = JNCIS-SEC Certification, Open Learning - Security, Specialist (JNCIS-SEC), Security Policies (Advanced)

NEW QUESTION # 50

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps. Which action should you take to solve this issue?

- A. Enable time synchronization on the JIMS server.
- B. Enable time synchronization on the client devices.
- C. Enable time synchronization on the SRX Series devices.
- **D. Enable time synchronization on the domain controllers.**

Answer: D

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. Reference: = Juniper Identity Management Service User Guide, Juniper Identity Management Service Feature Guide, Configure JIMS Collector to Get Microsoft Event Logs, Considerations for timestamps in centralized logging platforms

NEW QUESTION # 51

Which two statements are correct about JSA data collection? (Choose two.)

- **A. The Flow Collector can use statistical sampling**
- B. The Flow Collector parses logs.
- C. The Event Collector collects information using BGP FlowSpec.
- **D. The Event Collector parses logs**

Answer: A,D

Explanation:

The Flow Collector can use statistical sampling to collect and store network flow data in the JSA database. The Event Collector collects information from various sources including syslog, SNMP, NetFlow, and BGP FlowSpec. Both the Flow Collector and the Event Collector parse logs to extract useful information from the logs.

NEW QUESTION # 52

Which two statements are true about Juniper ATP Cloud? (Choose two.)

- A. Juniper ATP Cloud only uses one antivirus software package to analyze files.
- **B. Juniper ATP Cloud uses multiple antivirus software packages to analyze files.**
- C. Juniper ATP Cloud uses antivirus software packages to protect against zero-day threats.
- **D. Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats.**

Answer: B,D

Explanation:

Two statements that are true about Juniper ATP Cloud are:

Juniper ATP Cloud uses multiple antivirus software packages to analyze files: Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity. Juniper ATP Cloud uses multiple antivirus software packages from different vendors to scan files for known malware signatures and provide a comprehensive verdict based on their results. Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats: Juniper ATP Cloud protects

against zero-day threats by using dynamic analysis, not antivirus software packages.

Dynamic analysis is a method of executing files in a sandbox environment and observing their behavior and network interactions.

Dynamic analysis can uncover unknown malware that may evade static analysis or signature-based detection methods.
