Tableau Desktop Specialist Exam Sample Questions (Q142-Q147):

NEW QUESTION # 142

Suppose you create a bar chart by dragging a dimension to the Column shelf and a measure to the Rows shelf.

Which of the following would create a stacked bar chart?

- A. By dragging another dimension to the Rows shelf
- B. By dragging another measure to Color on the Marks card
- C. By dragging another measure to the Columns shelf
- **D. By dragging another dimension to Color on the Marks card**

Answer: D

Explanation:

Very important question for the exam and appears quite a lot too.

The correct answer is - By dragging another dimension to Color on the Marks card.

Chart, bar chart Description automatically generated

□ This is what the question says we have already created. Now to convert this into a Stacked bar chart, we will drop another dimension on Color in the Marks card.

Chart, bar chart Description automatically generated

□ The rest won't create stacked bar charts, and hence are incorrect choices. The best way to answer such questions on the real exam is to quickly do what the options say and see if they satisfy the requirements in the question.

NEW QUESTION # 143

Which chart type uses automatically generated sizes that cannot be resized by using the Marks card?

- A. Area charts
- B. Pie charts
- C. Histograms
- **D. Treemaps**

Answer: D

Explanation:

Treemaps use automatically generated sizes that cannot be resized by using the Marks card. A treemap is a type of visualization that shows hierarchical data as a set of nested rectangles. Each rectangle represents a dimension member and its size is proportional to a measure value. Tableau automatically calculates the size of each rectangle based on an optimal aspect ratio for readability and comparison. You cannot manually adjust the size of each rectangle by using the Marks card or any other option in Tableau. The other chart types do not use automatically generated sizes that cannot be resized by using the Marks card. Pie charts use angles to show proportions of a whole, not sizes. Histograms use bins and frequencies to show distributions of a measure, not sizes. Area charts use filled areas to show trends over time or categories, not sizes. You can adjust the size of these chart types by using the Marks card or other options in Tableau.

NEW QUESTION # 144

Which of the following are valid reasons to use a Tableau Data Extract (.tde) over Live Connections?

- **A. Help improve performance**
- **B. To support additional functionality such as count distinct**
- **C. Fast to create**
- D. To have access to the freshest possible data at all times

Answer: A,B,C

Explanation:

Explanation

From the official documentation, the following are the major advantages of using Tableau Data Extracts:

□ From Tableau 2020.2 onwards, .hyper is the recommended way since it is faster than .tde!

NEW QUESTION # 145

Download the Dataset from:

<https://drive.google.com/file/d/12AYHfIPWkwBmvH0zbumOURgUX6Az00Rw/view?usp=sharing> Using the Time Series Table,

create a line chart to show Sales over time. Which Month and Year witnessed the lowest Sales?

- A. December 2017
- B. September 2017
- **C. January 2018**
- D. March 2018

Answer: C

Explanation:

Follow the steps to get the correct answer : January 2018

□ We are talking about dates, so use the Time series sheet as follows:

Next, the following should be your view and clearly, January 2018 is the lowest point:

□ Read more about dates:
