Control: Pesticide Applicator Category 7A General and Household Pest Control Exam –Reliable Questions Pdf

Most people said the process is more important than the result, but as for Category-7A-General-and-Household-Pest-Control exam, the result is more important than the process, because it will give you real benefits after you obtain Category-7A-General-and-Household-Pest-Control exam certification in your career in IT industry. If you have made your decision to pass the exam, our Category-7A-General-and-Household-Pest-Control exam software will be an effective guarantee for you to Pass Category-7A-General-and-Household-Pest-Control Exam. Maybe you are still doubtful about our product, it doesn't matter, but if you try to download our free demo of our Category-7A-General-and-Household-Pest-Control exam software first, you will be more confident to pass the exam which is brought by our Prep4away.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q53-Q58):

NEW QUESTION # 53

Which of the following application instructions related to indoor use is correct?

- A. Do not spray bed linens or other materials that come in direct contact with people
- B. Use a high-pressure system for a spray application
- C. Apply as a broadcast treatment to floors or floor coverings

Answer: A

Explanation:

The TEMPRID SC label explicitly states that applicators should not spray bed linens or other materials that come in direct contact with people, such as mattresses, pillows, or clothing, to prevent human exposure to the pesticide. This is a critical safety instruction for indoor use in Category 7A applications.

Option A (broadcast treatment to floors) is incorrect, as TEMPRID is typically applied as a spot or crack-and-crevice treatment indoors, not a broadcast application, unless specified. Option C (high-pressure system) is incorrect, as high-pressure systems can disperse pests like bedbugs and are not recommended for indoor use; low-pressure, targeted applications are preferred.

NEW QUESTION # 54

The certified commercial pesticide applicator is ____ pesticide operator.

- A. Responsible for the minimum annual retraining required for a
- B. All of the answers are applicable
- C. Jointly liable for all violations committed by any
- D. Responsible for the proper training of a

Answer: B

Explanation:

Under NJDEP regulations (N.J.A.C. 7:30-6.2 and 7:30-5.2), a certified commercial pesticide applicator overseeing a pesticide operator has multiple responsibilities. Option A: The applicator is jointly liable for violations committed by the operator under their supervision, as they are responsible for ensuring compliance with all pesticide laws. Option B: The applicator must ensure the operator receives proper training, which includes initial training on safe pesticide use, handling, and application techniques as outlined in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 1: Legal Responsibilities).

Option C: Annual retraining is also required to maintain competency and stay updated on regulations, a requirement for operators under the supervision of a certified applicator (NJDEP guidelines). Since all these responsibilities apply, Option D is correct.

NEW QUESTION # 55

Control of bedbugs is best achieved through:

- A. Integrated pest management practices
- B. Use of residual insecticides
- C. A regimen of programmed pesticide application

Answer: A

Explanation:

Bedbug control is most effective using Integrated Pest Management (IPM) practices, which combine multiple methods such as inspection, monitoring, heat treatments, vacuuming, and targeted pesticide use. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7:

Bedbugs) emphasizes IPM due to bedbugs' resistance to many pesticides and their ability to hide in cracks and crevices. Option A (programmed pesticide application) is less effective and can lead to resistance. Option C (residual insecticides) is a component of control but not the best standalone method.

NEW QUESTION # 56

Pesticide toxicity caused by a one-time exposure to a pesticide is referred to as:

- **A. Acute toxicity**
- B. Systemic toxicity
- C. Chronic toxicity

Answer: A

Explanation:

Acute toxicity refers to the adverse effects resulting from a single, short-term exposure to a pesticide, such as during an application. This can cause immediate symptoms like dizziness, nausea, or skin irritation, as explained in the General Pest Management: Guide for Commercial Applicators - Category

7A (Chapter 3: Pesticide Safety). Option A (chronic toxicity) involves long-term exposure. Option C (systemic toxicity) refers to effects on the entire body but is not specific to one-time exposure.

NEW QUESTION # 57

The cockroach that has two dark bands on the shield directly behind the head is the ____ cockroach.

- A. Wood
- B. American
- **C. German**
- D. Oriental

Answer: C

Explanation:

The German cockroach is identified by two dark, parallel bands on the pronotum (shield) directly behind its head. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Cockroaches) provides this as a key identifying feature. Option A (Oriental cockroach) is uniformly dark brown or black. Option C (Wood cockroach) is not a common indoor species and lacks these bands. Option D (American cockroach) has a different pattern, often with a yellowish figure-eight marking.

NEW QUESTION # 58

.....

As is known to us, our company is professional brand established for compiling the Category-7A-General-and-Household-Pest-Control study materials for all candidates. The Category-7A-General-and-Household-Pest-Control study materials from our company are designed by a lot of experts and professors of our company in the field.
