## 2026 Professional Online Mule-Dev-301 Bootcamps Help You Pass Mule-Dev-301 Easily

Please believe that our Pass4Leader team have the same will that we are eager to help you pass Mule-Dev-301 exam. Maybe you are still worrying about how to prepare for the exam, but now we will help you gain confidence. By constantly improving our dumps, our strong technical team can finally take proud to tell you that our Mule-Dev-301 exam materials will give you unexpected surprises. You can download our free demo to try, and see which version of Mule-Dev-301 Exam Materials are most suitable for you; then you can enjoy your improvement in IT skills that our products bring to you; and the sense of achievement from passing the Mule-Dev-301 certification exam.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q39-Q44):

### NEW QUESTION # 39

A developer is working on a project that requires encrypting all data before sending it to a backend application. To accomplish this, the developer will use PGP encryption in the Mule 4 Cryptography module.

What is required to encrypt the data before sending it to the backend application?

- A. The application needs to both the private and public keys to encrypt the data
- **B. The application needs the public key from the backend service to encrypt the data**
- C. The application needs the private key from the backend service to encrypt the data
- D. The application needs to configure HTTPS TLS context information to encrypt the data

**Answer: B**

Explanation:

To encrypt the data before sending it to the backend application using PGP encryption, the application needs the public key from the backend service. PGP encryption uses a public-key cryptography system, which means that each party has a pair of keys: a public

key and a private key. The public key is used to encrypt data, and the private key is used to decrypt data. Therefore, to encrypt data for a specific recipient (the backend service), the application needs to use the recipient's public key. The recipient can then use its own private key to decrypt the data. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/cryptography-pgp>

#### NEW QUESTION # 40

An API has been built to enable scheduling email provider. The front-end system does very little data entry validation, and problems have started to appear in the email that go to patients. A validate-customer" flow is added validate the data.

What is he expected behavior of the 'validate-customer" flow?

- A. If the email address is invalid, processing continues to see if the appointment data and customer name are also invalid
- B. If the appointment date and customer name are invalid, a SCHEDULE:INVALID\_APPOINTMENT\_DATE error is raised
- C. If only the email address is invalid a VALIDATION.INVALID\_EMAIL error is raised
- D. If all of the values are invalid the last validation error is raised:SCHEDULE:INVALID\_CUSTOMER\_NAME

**Answer: C**

Explanation:

The validate-customer flow uses an until-successful scope to validate each field of the customer data. The until-successful scope executes its processors until they succeed or exhausts the maximum number of retries. If any processor fails, it raises an error and stops executing the remaining processors. Therefore, if only the email address is invalid, a VALIDATION.INVALID\_EMAIL error is raised and the validation of appointment date and customer name is skipped. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope>

#### NEW QUESTION # 41

A company deploys 10 public APIs to CloudHub. Each API has its individual health endpoint defined. The platform operation team wants to configure API Functional Monitoring to monitor the health of the APIs periodically while minimizing operational overhead and cost.

How should API Functional Monitoring be configured?

- A. From one public location with each API in its own schedule
- B. From one private location with all 10 APIs in a single schedule
- C. From one public location with all 10 APIs in a single schedule
- D. From 10 public locations with each API in its own schedule

**Answer: C**

Explanation:

To configure API Functional Monitoring to monitor the health of 10 public APIs periodically while minimizing operational overhead and cost, the developer should use one public location with all 10 APIs in a single schedule. A public location is a worker that runs in a CloudHub shared environment, which is cheaper and easier to maintain than a private location. A single schedule allows running all 10 APIs tests at the same time and frequency, which reduces complexity and resource consumption. Reference: <https://docs.mulesoft.com/functional-monitoring/fm-create-monitor#create-a-monitor>

#### NEW QUESTION # 42

A healthcare customer wants to use hospital system data, which includes code that was developed using legacy tools and methods. The customer has created reusable Java libraries in order to read the data from the system.

What is the most effective way to develop an API retrieve the data from the hospital system?

- A. Create the Java code in your project and invoice the data from the code
- B. Include the libraries writes deploying the code into the runtime
- C. Install libraries in a local repository and refer to it in the pm.xml file
- D. Refer to JAR files in the code

**Answer: C**

Explanation:

To develop an API that retrieves data from a hospital system using reusable Java libraries, the developer should install libraries in a

local repository and refer to it in the pom.xml file. This way, the developer can use Maven to manage dependencies and invoke Java code from Mule applications using Java Module operations. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/java-module-reference#add-the-java-module-to-your-project> <https://docs.mulesoft.com/mule-runtime/4.3/java-module-reference#invoke-java-code>

#### NEW QUESTION # 43

A Flight Management System publishes gate change notification events whenever a flight's arrival gate changes. Other systems, including Baggage Handler System, Inflight Catering System and Passenger Notifications System, must each asynchronously receive the same gate change notification to process the event according.

Which configuration is required in Anypoint MQ to achieve this publish/subscribe model?

- A. Publish the gate change notification to an Anypoint MQ exchange.  
Create different Anypoint MQ queues meant for each of the other subscribing systems. Bind the exchange with each of the queues.
- B. Publish the gate change notification to an Anypoint MC queue  
Have each client subscribe directly to the queue
- C. Publish each client subscribe directly to the exchange.  
Have each client subscribe directly to the queue.
- D. Publish the gate change notification to an Anypoint MQ queue.  
Create different anypoint MQ exchange meant for each of the other subscribing systems Bind the queue with each of the exchanges

**Answer: A**

Explanation:

To achieve a publish/subscribe model using Anypoint MQ, where each system receives the same gate change notification event, the developer should publish the gate change notification to an Anypoint MQ exchange, create different Anypoint MQ queues meant for each of the other subscribing systems, and bind the exchange with each of the queues. An exchange is a message routing agent that can send messages to different queues based on predefined criteria. By binding an exchange with multiple queues, each queue receives a copy of every message sent to that exchange. Therefore, each system can subscribe to its own queue and receive every gate change notification event. Reference: <https://docs.mulesoft.com/anypoint-mq/3.x/anypoint-mq-exchanges>

#### NEW QUESTION # 44

.....

In this website, you can find three different versions of our Mule-Dev-301 guide torrent which are prepared in order to cater to the different tastes of different people from different countries in the world since we are selling our Mule-Dev-301 test torrent in the international market. Most notably, the simulation test is available in our software version. With the simulation test, all of our customers will have an access to get accustomed to the Mule-Dev-301 Exam atmosphere and pass easily in the real Mule-Dev-301 exam.

**Reliable Mule-Dev-301 Exam Sims:** <https://www.pass4leader.com/Salesforce/Mule-Dev-301-exam.html>

Nobody will complain the price of Mule-Dev-301 practice questions pdf if he knows it very well, To get the Mule-Dev-301 certification is considered as the most direct-viewing way to make big change in your professional profile, and we are the exact Mule-Dev-301 exam braindumps vendor, Valid Mule-Dev-301 study guide files will help you clear exam in shortest time every time, it will be fast for you to obtain certifications and realize your goal, Perhaps the path to successful pass the Mule-Dev-301 is filled variables, but now there is only one possibility to successfully obtain a Mule-Dev-301 certification.

Sample all layers or current layer, Genome Architecture and Sequence Variation in Health and Disease, Nobody will complain the price of Mule-Dev-301 Practice Questions pdf if he knows it very well.
