Besides we have the right to protect your email address and not release your details to the 3rd parties.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q393-

Q398):

NEW QUESTION # 393

Twitter is a service that allows users to exchange short text messages. This is an example of:

- A. QoS
- B. PaaS
- C. IaaS
- **D. SaaS**

Answer: D

NEW QUESTION # 394

An IT administrator is planning to migrate servers to the cloud since they are at the end of support. Most of the servers' capacities are unused, and the contract to renew the servers is expensive. Which of the following is a result of migrating to the cloud?

- A. Stable costs
- B. Ability to self-service
- **C. Pay-as-you-go costs**
- D. Reduced elasticity

Answer: C

Explanation:

Pay-as-you-go costs refer to the cloud pricing model where the company only pays for the resources it uses, instead of committing to a fixed capacity or expensive contract renewal for physical servers. Since most of the servers' capacities are unused, migrating to the cloud allows the company to scale resources up or down as needed and only pay for the actual usage, resulting in potential cost savings.

NEW QUESTION # 395

A network administrator needs to manage a virtual switch remotely in a secure manner. Which of the following tools would MOST likely be used?

- A. Telnet
- B. RDP
- **C. SSH**
- D. SNMP

Answer: C

NEW QUESTION # 396

A company would like to improve its current DR plan with an emphasis on high availability. Which of the following metrics should the company focus on?

- **A. RTO**
- B. QoS
- C. MTTR
- D. RPO

Answer: A

Explanation:

A company that would like to improve its current disaster recovery (DR) plan with an emphasis on high availability should focus on the metrics of recovery time objective (RTO) and recovery point objective (RPO). RTO is the maximum duration of time that a system or service can be unavailable after a disaster or disruption before the business suffers unacceptable consequences. RPO is the maximum amount of data loss that a system or service can tolerate in a disaster or disruption before the business suffers unacceptable consequences. Both RTO and RPO measure the impact of downtime on the business and help determine the appropriate recovery strategies and solutions. High availability requires low RTO and RPO values, which means that the system or

service should be restored quickly and with minimal data loss in case of a disaster or disruption.
