Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q39-Q44):

NEW QUESTION # 39
An administrator is looking for a solution that can provide insight into users and data stored in major SaaS applications in the multicloud environment. Which product should the administrator deploy to have secure access to SaaS applications? (Choose one answer)

- A. FortiSandbox
- B. FortiSIEM
- C. FortiWeb
- D. FortiCASB

Answer: D

Explanation:
Comprehensive and Detailed Explanation From FortiOS 7.6, FortiWeb 7.4 Exact Extract study guide:
Based on theFortinet Cloud Security 7.4documentation and theFortiCASB Administration Guide, secur5ing a multi6cloud environment requires specialized tools for Software-as-a-Service (SaaS) visibility:
* SaaS Visibility and Protection (Option B):FortiCASB (Cloud Access Security Broker) is a cloud- native service designed

specifically to provideinsight into users and datastored within major SaaS applications like Office 365, Google Drive, and Salesforce.
* Key Capabilities:
* Data Discovery:It allows administrators to scan and identify sensitive data (PII, PCI, etc.) stored within SaaS platforms to prevent data leakage.
* User Behavior Monitoring:It tracks user activities and alerts on anomalous behavior, such as logins from suspicious locations or excessive file downloads, to ensuresecure access.
* Threat Protection:It integrates with FortiGuard to scan files within the cloud for malware, providing a layer of security that traditional network firewalls cannot reach once the data is inside the SaaS provider's infrastructure.
* Why other options are incorrect:
* Option A:FortiSandbox is used for advanced threat detection by executing suspicious files in a safe environment; it does not provide user/data management for SaaS applications.
* Option C:FortiWeb is a Web Application Firewall (WAF) designed to protect web applications and APIs hosted on-premises or in the cloud from attacks like SQL injection; it is not a SaaS security broker.
* Option D:FortiSIEM is a security information and event management solution used for cross- infrastructure logging and correlation; while it can ingest logs from SaaS, it does not provide the native data-level insights or direct access controls that FortiCASB offers.
