Pursue Certifications NCLEX-RN Latest Test Prep Exam Questions

Before you buy our NCLEX-RN study questions you can have a free download and tryout and you can have an understanding of our product by visiting our pages of our product on the website. The pages of our NCLEX-RN guide torrent provide the demo and you can understand part of our titles and the form of our software. On the pages of our NCLEX-RN exam torrent you can see the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the product, the price of the product and the discounts. The pages also list the details and the guarantee of our NCLEX-RN Exam Torrent, the methods to contact us, the evaluations of the past client on our product, the related exams and other information about our NCLEX-RN guide torrent. So before your purchase you can have an understanding of our product and then decide whether to buy our NCLEX-RN study questions or not.

NCLEX-RN (National Council Licensure Examination for Registered Nurses) is a certification exam that is mandatory for all aspiring registered nurses in the United States. NCLEX-RN Exam is designed to test the knowledge, skills, and abilities of registered nurses seeking licensure in the US. It is the final step in the nursing education process and is a crucial step in obtaining a nursing license.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q207-Q212):

NEW QUESTION # 207

The predominant purpose of the first Apgar scoring of a newborn is to:

- A. Obtain a baseline for comparison with the infant's future adaptation to the environment

- B. Determine the extent of congenital malformations
- **C. Evaluate the infant's vital functions**
- D. Determine gross abnormal motor function

Answer: C

Explanation:

Explanation

(A) Apgar scores are not related to the infant's care, but to the infant's physical condition. (B) Apgar scores assess the current physical condition of the infant and are not related to future environmental adaptation. (C) The purpose of the Apgar system is to evaluate the physical condition of the newborn at birth and to determine if there is an immediate need for resuscitation. (D) Congenital malformations are not one of the areas assessed with Apgar scores.

NEW QUESTION # 208

The mother of a 7-year-old mental health center client reports that the client has refused to attend gymnastics for the past 2 weeks. Prior to that time, the child liked going to this class and was attending 3 times a week. In talking with the client, the nurse would:

- A. Ask her why she doesn't like gymnastics anymore
- B. Tell her that it is OK to be afraid of this activity
- **C. Ask her to describe how things were at gymnastics before she started refusing to go**
- D. Reassure her that things will get better once she begins the classes again

Answer: C

Explanation:

(A) The child has not said that she dislikes gymnastics. (B) The nurse will be able to obtain information on what events occurred at gymnastics prior to her refusal to attend. The nurse will also gain information about the child's perception of the problem. (C) The child has not said she is afraid to go to gymnastics. (D) False reassurance is inappropriate.

NEW QUESTION # 209

The nurse is caring for a laboring client. Assessment data include cervical dilation 9 cm; contractions every 1-2 minutes; strong, large amount of "bloody show." The most appropriate nursing goal for this client would be:

- **A. Provide strategies to maintain client control.**
- B. Assist with assessment procedures.
- C. Enlist additional caregiver support to ensure client's safety.
- D. Maintain client's privacy.

Answer: A

Explanation:

(A) Privacy may help the laboring client feel safer, but measures that enhance coping take priority. (B) The frequency of assessments do increase in transition, but helping the client to maintain control and cope with this phase of labor takes on importance. (C) This laboring client is in transition, the most difficult part of the first stage of labor because of decreased frequency, increased duration and intensity, and decreased resting phase of the uterine contraction. The client's ability to cope is most threatened during this phase of labor, and nursing actions are directed toward helping the client to maintain control. (D) Safety is a concern throughout labor, but helping the client to cope takes on importance in transition.

NEW QUESTION # 210

To prevent fungal infections of the mouth and throat, the nurse should teach clients on inhaled steroids to:

- **A. Rinse the mouth and gargle with warm water after each use of the inhaler**
- B. Rinse the mouth before each use to eliminate colonization of bacteria
- C. Rinse the plastic holder that aerosolizes the drug with hydrogen peroxide every other day
- D. Take antacids immediately before inhalation to neutralize mucous membranes and prevent infection

Answer: A

Explanation:

Explanation

(A) It is sufficient to rinse the plastic holders with warm water at least once per day. (B) It is important to rinse the mouth after each use to minimize the risk of fungal infections by reducing the droplets of the glucocorticoid left in the oral cavity. (C) Antacids act by neutralizing or reducing gastric acid, thus decreasing the pH of the stomach. "Neutralizing" the oral mucosa prior to inhalation of a steroid inhaler does not minimize the risk of fungal infections. (D) Rinsing prior to the use of the glucocorticoid will not eliminate the droplets left on the oral mucous membranes following the use of the inhaler.

NEW QUESTION # 211

The nurse would be concerned if a client exhibited which of the following symptoms during her postpartum stay?

- A. Diuresis by her second or third postpartum day
- B. Pulse rate of 50-70 bpm by her third postpartum day
- C. Vaginal discharge or rubra, serosa, then rubra
- D. Diaphoresis by her third postpartum day

Answer: C

Explanation:

Explanation/Reference:

Explanation:

(A) Bradycardia is an expected assessment during the postpartum period. (B) Diuresis can occur during labor and the postpartum period and is an expected physiological adaptation. (C) A return of rubra after the serosa period may indicate a postpartal complication. (D) Diaphoresis, especially at night, is an expected physiological change and does not indicate an infectious process. Bradycardia, diuresis, and diaphoresis are normal postpartum physiological responses to adjust the cardiac output and blood volume to the nonpregnant state.

NEW QUESTION # 212
