Reliable Mule-Dev-202 Dumps Ebook & Mule-Dev-202 Braindumps Torrent

Sharp tools make good work. Mule-Dev-202 study material is the best weapon to help you pass the exam. After a survey of the users as many as 99% of the customers who purchased Mule-Dev-202 study material has successfully passed the exam. The pass rate is the test of a material. Such a high pass rate is sufficient to prove that Mule-Dev-202 Study Material has a high quality. In order to reflect our sincerity on consumers and the trust of more consumers, we provide a 100% pass rate guarantee for all customers who have purchased Mule-Dev-202 study materials.

For the candidates, getting access to the latest Salesforce Mule-Dev-202 practice test material takes a lot of work. The study materials for the Mule-Dev-202 test preparation are spread throughout a number of websites and the majority of them aren't updated. However, the applicants only have a short time to prepare for the Salesforce Mule-Dev-202 Exam. They want a platform that offers the latest and real Mule-Dev-202 exam questions so they can get prepared within a few days.

Quiz Salesforce - Mule-Dev-202 - The Best Reliable Salesforce Certified MuleSoft Hyperautomation Developer Dumps Ebook

It is known to us that the Mule-Dev-202 exam has been increasingly significant for modern people in this highly competitive word, because the Mule-Dev-202 test certification can certify whether you have the competitive advantage in the global labor market or have the ability to handle the job in a certain area, especial when we enter into a newly computer era. Therefore our Mule-Dev-202 practice torrent is tailor-designed for these learning groups, thus helping them pass the Mule-Dev-202 exam in a more productive and efficient way and achieve success in their workplace.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q26-Q31):

NEW QUESTION # 26
Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA boots used by its customer service representatives.
How should this API be shared within the organization?

- A. The API asset should be published to the public Exchange portal.
- B. The API asset should be published to the private Exchange portal.
- C. Example assets should be published to the private Exchange.
- D. The API's RAML specification should be stored in a SharePoint repository.

Answer: B

Explanation:
To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best approach:
Private Exchange Portal:
The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.
Access Control and Security:
By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.
Ease of Use:
Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.

NEW QUESTION # 27
An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- A. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.
- B. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.
- C. Create a second MuleSoft Composer flow that starts when the RPA process is complete.
- D. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.
- E. Using best practices, how should the results be consumed by MuleSoft Composer?

Answer: C

Explanation:
When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:
Second MuleSoft Composer Flow:
Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.
The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.
Trigger Mechanism:
Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.
Best Practices:
This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

NEW QUESTION # 28
An AnyAirlines employee regularly performs a manual process to extract customer and flight information from multiple legacy systems. AnyAirlines recently purchased MuleSoft automation and wants to automate this process using MuleSoft RPA.
During an evaluation of the candidate RPA process, which two key qualifiers should be considered? (Choose two.)

- A. Is the process speed-sensitive?
- B. Is the process risky?
- C. Is the process data-driven?
- D. Is the process rule-based?

Answer: C,D

Explanation:
When evaluating a candidate process for RPA automation using MuleSoft RPA, consider the following key qualifiers:
Is the Process Rule-Based?:
RPA is well-suited for processes that follow clear, predefined rules. If the process involves repetitive tasks with defined rules and decision points, it is a good candidate for RPA automation.
Rule-based processes can be accurately automated by RPA bots without the need for complex decision- making.
Is the Process Data-Driven?:
Data-driven processes involve manipulating, transferring, and extracting data, making them ideal for RPA automation.
If the manual process involves working with structured data (e.g., extracting customer and flight information), it is a good fit for RPA, as bots can efficiently handle data operations.
Other considerations like risk and speed sensitivity are also important but focusing on rule-based and data- driven aspects ensures that the process is structured and systematic, making it easier to automate reliably.

RPA Best Practices

NEW QUESTION # 29
AnyAirlines is developing an RPA process and is implementing testing best practices. They want to take the RPA process through rigorous testing.
During these tests, where do RPA process test plans execute?

- A. On a configured RPA Bot
- B. In RPA Manager
- C. In an RPA process runtime
- D. In RPA Builder

Answer: A

Explanation:
During testing of an RPA process, test plans are executed on a configured RPA Bot. This allows you to simulate real-world scenarios and ensure the RPA process works correctly under various conditions:
On a Configured RPA Bot:
RPA Bots are configured to execute the automated tasks defined in the RPA process. By running test plans on these bots, you can verify the functionality and performance of the RPA process.
This approach ensures that the RPA process is thoroughly tested in an environment that closely mirrors production conditions.

MuleSoft RPA Documentation

NEW QUESTION # 30
A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.
Before designing a new integration, what should they use to determine if the integration exists and can be reused?

- A. MuleSoft Composer
- B. Anypoint Exchange
- C. Anypoint Studio
- D. Design Center

Answer: B

Explanation:
To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:
Anypoint Exchange:
Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.
By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.
