

CAS-005 Latest Study Questions, Exam CAS-005 Topic

BTW, DOWNLOAD part of Real4test CAS-005 dumps from Cloud Storage: <https://drive.google.com/open?id=1YnT9Y4zaY1W6vgqHHZdlsMIEtLLCRkq8>

We take so much pride in the high pass rate of our CAS-005 study questions because according to the statistics from the feedbacks of all of our customers, under the guidance of our CAS-005 exam materials the pass rate has reached as high as 98% to 100%, which marks the highest pass rate in the field. So if you really want to pass the CAS-005 Exam as well as getting the certification with no danger of anything going wrong, just feel rest assured to buy our CAS-005 learning guide.

Attending training institution or having CompTIA online training classes may be a good choice for candidates. But for people who have no time and energy to prepare for CAS-005 practice exam, training calss will make them tired and exhausted. The most effective way for them to pass CAS-005 Actual Test is choosing best study materials that you will find in Real4test.

Use Latest CompTIA CAS-005 Dumps And Gain Brilliant Scores

As job seekers looking for the turning point of their lives, it is widely known that the workers of recruitment is like choosing apples--viewing resumes is liking picking up apples, employers can decide whether candidates are qualified by the CAS-005 appearances, or in other words, candidates' educational background and relating CAS-005 professional skills. They develop the CAS-005 exam guide targeted to real exam. The wide coverage of important knowledge points in our CAS-005 latest braindumps would be greatly helpful for you to pass the exam.

CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.
Topic 2	<ul style="list-style-type: none">• Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.
Topic 3	<ul style="list-style-type: none">• Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.
Topic 4	<ul style="list-style-type: none">• Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.

CompTIA SecurityX Certification Exam Sample Questions (Q116-Q121):

NEW QUESTION # 116

A security analyst is reviewing the following code in the public repository for potential risk concerns:

typescript

CopyEdit

```
include bouncycastle-1.4.jar;
include jquery-2.0.2.jar;
public static void main() {...}
public static void territory() { ... }
public static void state() { ... }
public static String code = "init";
public static String access_token = "spat-hfeiw-sogur-werdb-werib";
```

Which of the following should the security analyst recommend first to remediate the vulnerability?

- A. Revoking the secret used in the solution
- B. Scanning the application with SAST
- C. Developing role-based security awareness training
- D. Purging code from public view

Answer: A

Explanation:

Comprehensive and Detailed

The code snippet exposes a hardcoded access token in a public repository. According to SecurityX CAS-005 secure coding best practices, the immediate action must be to revoke the exposed secret to prevent unauthorized access.

Removing the code from public view without revoking the token leaves the secret still usable by any attacker who has already seen or copied it.

SAST scanning would detect the issue but not mitigate it immediately.

NEW QUESTION # 117

A security analyst reviews the following report:

□ Which of the following assessments is the analyst performing?

- A. Quantitative

- B. System
- **C. Supply chain**
- D. Organizational

Answer: C

Explanation:

The table shows detailed information about products, including location, chassis manufacturer, OS, application developer, and vendor. This type of information is typically assessed in a supply chain assessment to evaluate the security and reliability of components and services from different suppliers.

Why Supply Chain Assessment?

Component Evaluation: Assessing the origin and security of each component used in the products, including hardware, software, and third-party services.

Vendor Reliability: Evaluating the security practices and reliability of vendors involved in providing components or services.

Risk Management: Identifying potential risks associated with the supply chain, such as vulnerabilities in third-party components or insecure development practices.

NEW QUESTION # 118

A security architect performs a baseline review on the SIEM. The findings indicate that multiple use cases are missing and coverage is limited for defense evasion techniques. Which of the following processes best describes what the architect should do?

- A. Implement a TIP on the internal network to facilitate the creation of a use case.
- **B. Use Sigma to build the logic of the use cases and testing on the SIEM.**
- C. Create a list of use cases based on Snort detection rules.
- D. Perform a penetration test on critical devices and document IOCs for use cases.

Answer: B

Explanation:

Sigma is a vendor-agnostic detection rule format that allows building and testing SIEM use cases efficiently. Using Sigma ensures broader coverage, including defense evasion techniques, and provides a standardized approach for detection logic.

NEW QUESTION # 119

A compliance officer is facilitating a business impact analysis (BIA) and wants business unit leaders to collect meaningful data. Several business unit leaders want more information about the types of data the officer needs.

Which of the following data types would be the most beneficial for the compliance officer? (Select two)

- A. Network diagrams
- **B. Costs associated with downtime**
- **C. Applicable contract obligations**
- **D. Critical processes**
- E. Contingency plans
- F. Inventory details

Answer: B,C,D

Explanation:

Comprehensive and Detailed

Understanding Business Impact Analysis (BIA):

A BIA assesses the effects of disruptions to an organization's operations.

It helps prioritize resources based on the potential impact of downtime, compliance issues, and critical processes.

Why Options B, C, and F are Correct:

B (Applicable contract obligations) → Many companies have legal and compliance obligations regarding downtime, availability, and SLAs. This information helps determine what risk levels are acceptable.

C (Costs associated with downtime) → BIA quantifies the financial impact of system failures. Knowing lost revenue, regulatory fines, and recovery costs helps in planning.

F (Critical processes) → Identifying core business processes allows an organization to prioritize recovery efforts and maintain operational continuity.

Why Other Options Are Incorrect:

A (Inventory details) → While useful for asset management, it does not directly impact business continuity planning.
D (Network diagrams) → These help in security architecture but are not directly related to the financial/business impact analysis.
E (Contingency plans) → BIA is performed before contingency planning to identify what needs protection.

NEW QUESTION # 120

Source code snippets for two separate malware samples are shown below:

Which of the following describes the most important observation about the two samples?

- A. Telemetry is first buffered and then transmitted in paranoid mode.
- **B. The samples were probably written by the same developer.**
- C. Both samples use IP connectivity for command and control.
- D. Sample 1 is the target agent while Sample 2 is the C2 server.

Answer: B

Explanation:

Both samples share similar naming conventions (knockEmDown, sendC2, toString()usage), structure, and coding style (e.g., address.keepAlive("paranoid"), target.toShell(e), etc.), suggesting a common author or coding template. These stylistic similarities are strong indicators that they were likely written by the same developer.

NEW QUESTION # 121

.....

Checking our CAS-005 free demo is a great way of learning the pattern of exam materials and if it suits what you wanted. There are valid CAS-005 test questions and accurate answers along with the professional explanations in our study guide. All real questions just need to practice one or two days and remember the answers will save you much time in CAS-005 Real Exam. Come and join us.
