### NEW QUESTION # 41

Which restrictions exist for ABAP SQL arithmetic expressions? Note: There are 2 correct answers to this question.

- A. Decimal types and integer types can NOT be used in the same expression.
- B. The operator / is allowed only in floating point expressions.
- C. The operator + is allowed only in floating point expressions.
- D. Floating point types and integer types can NOT be used in the same expression.

**Answer: B,C**

Explanation:

ABAP SQL arithmetic expressions have different restrictions depending on the data type of the operands. The following are some of the restrictions:

Floating point types and integer types can be used in the same expression, as long as the integer types are cast to floating point types using the cast function. For example, `CAST ( num1 AS FLTP ) / CAST ( num2 AS FLTP )` is a valid expression, where num1 and num2 are integer types.

The operator `/` is allowed only in floating point expressions, where both operands have the type FLTP or f. For example, `num1 / num2` is a valid expression, where num1 and num2 are floating point types. If the operator `/` is used in an integer expression or a decimal expression, a syntax error occurs.

Decimal types and integer types can be used in the same expression, as long as the expression is a decimal expression. A decimal expression has at least one operand with the type DEC, CURR, or QUAN or p with decimal places. For example, `num1 + num2` is a valid expression, where num1 is a decimal type and num2 is an integer type.

The operator `**` is allowed only in floating point expressions, where both operands have the type FLTP or f. For example, `num1 ** num2` is a valid expression, where num1 and num2 are floating point types. If the operator `**` is used in an integer expression or a decimal expression, a syntax error occurs.

### NEW QUESTION # 42

Which extensibility type does SAP recommend you use to enhance the existing UI for an SAP Fiori app?

- A. Side-by-side
- B. Classic
- C. Key user
- D. Developer

**Answer: D**

Explanation:

According to the SAP clean core extensibility and ABAP cloud topic, SAP recommends using developer extensibility to enhance the existing UI for an SAP Fiori app. Developer extensibility allows you to use the UI adaptation editor in SAP Web IDE to modify the UI layout, add or remove fields, and bind them to the data model. You can also use the SAPUI5 framework to create custom

controls, views, and controllers. Developer extensibility is based on the in-app extensibility concept, which means that the extensions are part of the same application and are deployed together with the app. Developer extensibility requires developer skills and access to the source code of the app. Reference: SAP Learning Hub, SAP S/4HANA Cloud Extensibility - In-App Extensibility, SAP Fiori: Extensibility
