## AZ-801 Valid Exam Pattern, AZ-801 Exams Torrent

Our Microsoft AZ-801 practice exam software will record all the attempts you have made in the past and display any modifications or improvements made in each attempt. This Configuring Windows Server Hybrid Advanced Services (AZ-801) exam simulation software enables you to track your progress and quantify how much you have improved.

Earning the Microsoft AZ-801 Certification validates an IT professional's expertise in designing and implementing advanced Windows Server hybrid and cloud solutions. Configuring Windows Server Hybrid Advanced Services certification enables candidates to enhance their career prospects by demonstrating their proficiency in managing complex hybrid environments. Configuring Windows Server Hybrid Advanced Services certification also demonstrates a candidate's ability to work with Azure services and hybrid solutions, which are essential for organizations that are transitioning to the cloud.

## Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q85-Q90):

### NEW QUESTION # 85

Your on-premises network contains an Active Directory Domain Services (AD DS) domain.

You plan to implement a failover cluster to enable a highly available file server. You are evaluating the following clustered file servers:

\* File server for general use

\* Scale-out file server

Which type of storage should you use for each file server? To answer, drag the appropriate storage types to the correct file servers. Each storage type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to

view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

#### NEW QUESTION # 86

You have an Azure Active Directory Domain Services (Azure AD DS) domain named aadds.contoso.com.

You have an Azure virtual network named Vnet1. Vnet1 contains two virtual machines named VM1 and VM2 that run Windows Server. VM1 and VM2 are joined to aadds.contoso.com.

You create a new Azure virtual network named Vnet2. You add a new server named VM3 to Vnet2.

When you attempt to join VM3 to aadds.contoso.com, you get an error message that the domain cannot be found.

You need to ensure that you can join VM3 to aadds.contoso.com.

**Answer:**

Explanation:

#### NEW QUESTION # 87

The Default Domain Policy Group Policy Object (GPO) is shown in the GPO exhibit. (Click the GPO tab.)

The members of a group named Service Accounts are shown in the Group exhibit. (Click the Group tab.)

An organizational unit (OU) named ServiceAccounts is shown in the OU exhibit. (Click the OU tab.)

You create a Password Settings Object (PSO) as shown in the PSO exhibit. (Click the PSO tab.)

#### NEW QUESTION # 89

You have a single-domain Active Directory Domain Services (AD DS) forest named contoso.com that contains two domain controllers named DC1 and DC2. DC1 and DC2 run Windows Server.

You plan to perform an authoritative restore of SYSVOL on DC1.

You isolate DC1 and restore DC1 from a backup.

You need to ensure that SYSVOL on DC1 replicates to DC2.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
