CMMC-CCA Pass4sure Study Materials | CMMC-CCA Test Tutorials

CMMC-CCA exam certification is considered as a standard in measuring your professional skills in your industry. Besides, those possessing the Cyber AB CMMC-CCA certification are more likely to receive higher salaries. So it is very necessary to get CMMC-CCA certification. Here, TopExamCollection CMMC-CCA free pdf download can give you some reference. First, you should have preview about the content of CMMC-CCA real test. Cyber AB CMMC-CCA contains the comprehensive contents with explanations where is available. With the assist of CMMC-CCA training material, you will get success.

Cyber AB Certified CMMC Assessor (CCA) Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

A company has a CUI enclave for handling all CUI processed, stored, and transmitted through the organization. While interviewing the IT manager, the CCA asks how assets that can, but are not intended to, handle CUI are identified. The IT manager refers to the

CUI system's network diagram (which includes these assets) as well as the asset inventory (which lists these assets as Contractor Risk Managed Assets). Which other artifact **MUST** also mention these assets?

- A. The identification and authentication policy should show how these assets are identified.
- B. The physical protection policy should list these assets as being part of the physical environment of the organization.
- C. The awareness and training program should include these assets so they are covered for all employees.
- **D. The SSP should show these assets are managed using the company's risk-based security policies, procedures, and practices.**

Answer: D

Explanation:

Contractor Risk Managed Assets (CRMA) are required to be identified in the System Security Plan (SSP) because the SSP must describe how each in-scope asset category is managed, including risk-based policies, procedures, and practices. Network diagrams and inventories alone are insufficient without documentation in the SSP.

Exact Extracts:

* CMMC Scoping Guide: "Contractor Risk Managed Assets are part of the CMMC Assessment Scope and must be identified in the OSC's SSP and supporting documentation."

* "The SSP must describe how the contractor manages risk for Contractor Risk Managed Assets."

* "The asset categories (CUI assets, Security Protection Assets, Contractor Risk Managed Assets, Specialized Assets) must be included in the SSP with supporting evidence." Why the other options are not correct:

* A: Identification/authentication policy does not specifically require mention of CRMAs.

* B: Physical protection policies address facility controls, not risk-managed assets.

* C: Awareness training covers employees, not technical classification of assets.

* D: Correct, because the SSP must explicitly document how CRMAs are managed using risk-based approaches.

References:

CMMC Assessment Scope - Level 2, Version 2.13: Asset categories and documentation requirements for CRMAs (pp. 6-10).

CMMC Assessment Guide - Level 2, Version 2.13: SSP documentation requirements (pp. 12-14).

NEW QUESTION # 55

A CMMC Assessment Team is evaluating an OSC's implementation of RA.L2-3.11.1 - Risk Assessments.

Upon examining the OSC's Risk Assessment policy, the team learns that the OSC has specified frequencies for assessing risks to organizational operations, assets, and personnel. The results and reviews of risk assessments indicated that assessments are conducted at these defined frequencies. For the OSC's risk assessment to be accurate, it must consider all of the following except which factor?

- A. Risk likelihood and impact on organizational assets, personnel, and operations
- **B. Whether risk can be transferred to a third party**
- C. Risk from external parties
- D. Threats to organizational assets, operations, and personnel that arise from the operation and use of organizational systems

Answer: B

Explanation:

Comprehensive and Detailed in Depth Explanation:

RA.L2-3.11.1, per NIST SP 800-171 and CMMC Level 2, requires periodic risk assessments considering threats (Option A), likelihood and impact (Option B), and external parties (Option C) to ensure accuracy in protecting CUI. However, whether risk can be transferred (Option D) is a mitigation strategy, not a required consideration for assessment accuracy, as it occurs post-assessment. Option D is excluded from RA.L2-3.11.1's scope, making it the correct answer.

Reference Extract:

* NIST SP 800-171, 3.11.1: "Assess risks from threats, likelihood, impact, and external parties periodically."

* CMMC AG Level 2, RA.L2-3.11.1: "Risk assessments focus on threats, impacts, and external risks, not transferability." Resources: <https://csrc.nist.gov/pubs/sp/800/171/a/final>; https://dodcio.defense.gov/Portals/0/Documents/CMMC/AG_Level2_MasterV2.0_FINAL_202112016_508.pdf

NEW QUESTION # 56

Video monitoring is used by an OSC to help meet PE.L2-3.10.2: Monitor Facility. The OSC's building has three external doors, each with badge access and a network-connected video camera above the door. The video cameras are connected to the same network as employee computers. The OSC contracted a local security company to provide surveillance services. The security

company stores the recordings at its premises and requires access to the OSC's network to manage the video cameras. Which factor is a clear negative finding for the OSC's assessment?

- A. Video surveillance alone does not satisfy the facility monitoring requirement of PE.L2-3.10.2
- **B. A non-certified third party accesses the OSC's network to manage the cameras**
- C. A non-certified third party's data center may not store video recordings for a company authorized to process CUI
- D. Video surveillance needs to be of both private and public areas of the building

Answer: B

Explanation:

The negative finding is that the OSC permits an uncertified external security provider to access the OSC's internal network. This introduces unmanaged risk to the CUI environment. CMMC requires the OSC to control and monitor external service provider access. The storage of recordings externally is not inherently noncompliant if properly controlled, and video monitoring is a valid method of meeting PE.L2-3.10.2. The key failure is giving unmanaged third-party access.

Exact extracts:

* "Monitor physical facility to detect and respond to physical security incidents." (PE.L2-3.10.2)

* "Assessment Objectives ... Determine if: monitoring is performed; unauthorized physical access is detected and responded to."

* "External service providers that connect into the OSC network are considered in-scope and must meet CMMC requirements or have equivalent authorization (e.g., FedRAMP)." Why other options are incorrect:

* A: Requirement does not mandate monitoring of both public and private areas.

* C: Video surveillance is an acceptable facility monitoring method when properly implemented.

* D: External storage can be acceptable if contractual safeguards and compliance are in place.

References:

CMMC Assessment Guide - Level 2, PE.L2-3.10.2.

CMMC Scoping Guide - External Service Providers.

NEW QUESTION # 57

A company has a firewall to regulate how data flows into and out of its network. Based on an interview with their IT staff, all connections to their systems are logged, and suspicious traffic generates alerts. Examination of which artifact should give the CCA the details on how these are implemented?

- **A. Boundary protection procedures**
- B. Account management document
- C. Configuration management policy
- D. Physical access logs

Answer: A

Explanation:

The control SC.L2-3.13.5: Boundary Protection requires that organizations monitor and control communications at the external boundary and at key internal boundaries. The CMMC Assessment Guide states that assessors should examine boundary protection procedures to verify logging, monitoring, and alerting are defined and implemented. Physical access logs, account management documents, and configuration management policies do not provide details of how network boundaries are monitored and protected.

Exact extracts:

* "Assessment Objectives ... Determine if: * external boundary and key internal boundaries are defined; * communications are monitored and controlled at boundaries; * traffic is checked for unauthorized transfer of information; and * boundary protection devices are configured and managed."

* "Potential Assessment Methods: Examine ... boundary protection policy; boundary protection procedures; system security plan; configuration settings for boundary protection devices; logs of boundary protection devices." Why the other options are incorrect:

* A (Physical access logs): Relates to facility entry, not network boundary protection.

* C (Account management document): Addresses user account lifecycle, not firewall and traffic control.

* D (Configuration management policy): Governs system changes, not firewall logging/alerting controls.

References (CCA documents / Study Guide):

* CMMC Assessment Guide - Level 2, SC.L2-3.13.5 "Boundary Protection."

* NIST SP 800-171 Rev. 2, 3.13.5.

NEW QUESTION # 58

An OSC undergoing a CMMC Level 2 assessment provides evidence that includes a third-party audit report from a previous year.

The report indicates compliance with several CMMC practices, but it does not address the current state of the OSC's systems. How should the Lead Assessor treat this evidence?

- A. Accept the audit report as sufficient evidence for the practices it covers.
- B. Reject the audit report as outdated and request current evidence.
- C. Mark all practices covered by the report as "NOT MET" due to the lack of current data.
- **D. Use the audit report as partial evidence and request additional current evidence to verify ongoing compliance.**

Answer: D

Explanation:

Comprehensive and Detailed in Depth Explanation:

The CAP allows historical evidence if supplemented with current data (Option C). Options A, B, and D misapply evidence evaluation rules.

Extract from Official Document (CAP v1.0):

* Section 2.2 - Conduct Assessment (pg. 25): "Historical evidence may be used as partial evidence if supplemented with current data verifying ongoing compliance." References:

CMMC Assessment Process (CAP) v1.0, Section 2.2.

NEW QUESTION # 59

.....

Victory won't come to me unless I go to it. It is time to start to clear exam and obtain an IT certification to improve your competitor from our Cyber AB CMMC-CCA training PDF if you don't want to be discarded by epoch. Many IT workers have a nice improve after they get a useful certification. If you are willing, our CMMC-CCA Training Pdf can give you a good beginning. No need to doubt and worry, thousands of candidates choose our exam training materials, you shouldn't miss this high pass-rate CMMC-CCA training PDF materials.
