### NEW QUESTION # 131

A network team establishes a new connection to an IaaS CSP that is more efficient and has networking costs that are 25% less than previous monthly expenditures. The bill outlines the following costs:

Storage:\$10000

Compute:\$12000

Network:\$7000

Which of the following will be the total cloud expenditure for the following month?

- A. \$29000
- B. \$27250
- C. \$26000
- **D. \$26250**

**Answer: D**

Explanation:

The total cloud expenditure for the following month can be calculated by adding the costs of storage, compute, and network.

However, since the network team has established a new connection to an IaaS CSP that is more efficient and has networking costs that are 25% less than previous monthly expenditures, the network cost for the following month will be reduced by 25%. Therefore, the network cost for the following month will be  $\$7000 \times (1 - 0.25) = \$5250$ . The total cloud expenditure for the following month will be  $\$10000 + \$12000 + \$5250 = \$26250$ .
