300-710 New Dumps Ppt | 300-710 Valid Study Questions

Candidates who become Cisco 300-710 certified demonstrate their worth in the Cisco field. 300-710 certification is proof of their competence and skills. This is a highly sought after credential and it makes career advancement easier for the candidate. To become Cisco 300-710 Certified, you must pass the Securing Networks with Cisco Firepower (300-710) Exam. For this task, you need actual and updated 300-710 Questions.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q149-Q154):

NEW QUESTION # 149

A network engineer must configure the cabling between a Cisco Secure Firewall Threat Defense appliance and a network so the Secure Firewall Threat Defense appliance performs inline to analyze and tune generated intrusion events before going live. Which secure firewall threat defense mode must the engineer use?

- A. tap mode
- B. bypass
- C. strict TCP enforcement
- D. link state propagation

Answer: A

Explanation:

Tap mode (Inline Pair in Tap mode) allows the Cisco Secure Firewall Threat Defense appliance to be physically inline while still operating logically in passive mode, enabling the engineer to analyze and tune intrusion events without affecting live traffic. This is ideal for pre-deployment validation.

NEW QUESTION # 150

Which two routing options are valid with Cisco Firepower Threat Defense? (Choose two.)

- A. BGPv4 in transparent firewall mode
- B. BGPv4 with nonstop forwarding
- C. ECMP with up to three equal cost paths across multiple interfaces
- D. ECMP with up to three equal cost paths across a single interface
- E. BGPv6

Answer: D,E

Explanation:

Section: Configuration

Explanation/Reference: https://www.cisco.com/c/en/us/td/docs/security/firepower/601/configuration/guide/fpmc-config-guide-v601/fpmc-config-guide-v60_chapter_01100011.htm#ID-2101-000000e

NEW QUESTION # 151

Which two dynamic routing protocols are supported in Firepower Threat Defense without using FlexConfig? (Choose two.)

- A. BGP
- B. IS-IS
- C. EIGRP
- D. static routing
- E. OSPF

Answer: A,E

Explanation:

Both OSPF and BGP can be configured with Smart CLI without FlexConfig

<https://www.cisco.com/c/en/us/td/docs/security/firepower/660/fdm/fptd-fdm-config-guide-660/fptd-fdm-routing.html>

Table 1. Supported Routing Protocols

Routing Feature	Configuration Method	Notes
BGP	Smart CLI	Configure BGP Smart CLI objects from the Device > Routing page. Configure objects used in BGP, such as route maps, using Smart CLI objects from the Device > Advanced Configuration page.
Bi-directional forwarding detection (BFD)	FlexConfig	Configure BFD using FlexConfig objects from the Device > Advanced Configuration page. BFD is supported with BGP only.
EIGRP	FlexConfig	Configure EIGRP using FlexConfig objects from the Device > Advanced Configuration page.
IS-IS	FlexConfig	Configure IS-IS using FlexConfig objects from the Device > Advanced Configuration page.
Multicast routing	FlexConfig	Configure multicast routing using FlexConfig objects from the Device > Advanced Configuration page.
OSPFv2	Smart CLI	Configure OSPFv2 Smart CLI objects from the Device > Routing page. Configure objects used in OSPFv2, such as route maps, using Smart CLI objects from the Device > Advanced Configuration page.
OSPFv3	—	OSPFv3 configuration is not supported.
Policy-based routing (PBR)	FlexConfig	Configure policy-based routing (PBR) using FlexConfig objects from the Device > Advanced Configuration page.
RIP	FlexConfig	Configure RIP using FlexConfig objects from the Device > Advanced Configuration page.
Static routes	FDM	Configure static routes globally or per virtual router from the Device > Routing page.
Virtual routers, VRF	FDM	Configure virtual routers from the Device > Routing page.

NEW QUESTION # 152

A network administrator is reviewing a weekly scheduled attacks risk report and notices a host that is flagged for an Impact 2 attack. Where should the administrator look within Cisco FMC to find out more relevant information about this host and attack?

- A. Analysis > Correlation > Correlation Events
- B. Analysis > Lookup > Whois
- C. Analysis > Hosts > Vulnerabilities
- D. Analysis > Hosts > Host Attributes

Answer: A

Explanation:

When a host is flagged for an Impact 2 attack in Cisco FMC (Firepower Management Center), this indicates a moderate threat, meaning the attack was likely successful or could affect a vulnerable host.

To investigate what happened, including details about the attack, source/destination, application, and relevant detection rules, the administrator should review correlation events, which tie together intrusion events, host profiles, and vulnerabilities.

https://www.cisco.com/c/en/us/td/docs/security/firepower/70/configuration/guide/fpmc-config-guide-v70/correlation_and_compliance_events.html

NEW QUESTION # 153

A network engineer is deploying a pair of Cisco Secure Firewall Threat Defense devices managed by Cisco Secure Firewall Management Center for High Availability. Internet access is a high priority for the business and therefore they have invested in internet circuits from two different ISPs. The requirement from the customer is that internet access must be available to their users even if one of the ISPs is down. Which two features must be deployed to achieve this requirement? (Choose two.)

- A. BGP
- B. EtherChannel interfaces
- C. Route Tracking
- D. SLA Monitor
- E. Redundant interfaces

Answer: C,D

Explanation:

To ensure high availability of internet access when deploying a pair of Cisco Secure Firewall Threat Defense (FTD) devices managed by Cisco Secure Firewall Management Center (FMC), the following features must be deployed:

Route Tracking: This feature monitors the reachability of a specified target (such as an external IP address) through the configured routes. If the route to the target is lost, the FTD can dynamically adjust the routing to use an alternate path, ensuring continuous internet access. **SLA Monitor:** Service Level Agreement (SLA) monitoring works alongside route tracking to continuously verify the status and performance of the internet links. If the SLA for one of the ISP links fails (indicating the link is down or underperforming), the FTD can switch traffic to the secondary ISP link.

Steps to configure:

In FMC, navigate to Devices > Device Management.

Select the FTD device and configure route tracking to monitor the ISP links. Configure SLA monitors to continuously check the health and performance of the internet circuits. These configurations ensure that internet access remains available to users even if one of the ISPs goes down.

NEW QUESTION # 154

.....

Users are buying something online (such as 300-710 learning materials), always want vendors to provide a fast and convenient sourcing channel to better ensure the user's use. Because without a quick purchase process, users of our 300-710 learning materials will not be able to quickly start their own review program. So, our company employs many experts to design a fast sourcing channel for our 300-710 Learning Materials. All users can implement fast purchase and use our learning materials.
