

# Valid CAD Valid Exam Practice Covers the Entire Syllabus of CAD

P.S. Free 2026 ServiceNow CAD dumps are available on Google Drive shared by Itcerttest: <https://drive.google.com/open?id=1uFw6c8fMfjQKqmD0WBWXj2Z1znl4n5f>

Are you tired of feeling overwhelmed and unsure about how to prepare for the CAD exam? Are you ready to take control of your future and get the Certified Application Developer-ServiceNow (CAD) certification you need to accelerate your career? If so, it's time to visit Itcerttest and download real ServiceNow CAD Exam Dumps. Our team of experts has designed a CAD Exam study material that has already helped thousands of students just like you achieve their goals. We offer a comprehensive Certified Application Developer-ServiceNow (CAD) practice exam material that is according to the content of the CAD test.

ServiceNow CAD Certification Exam is not an easy certification to attain as it requires a deep understanding of ServiceNow's development principles, functionalities, and best practices. However, it is worth the effort to earn the certification as it is a valuable credential in the ServiceNow ecosystem. The CAD certification can open doors for the candidate to work with different organizations and lead to promotions and salary raises. Additionally, ServiceNow has a robust certification program that offers a clear path for individuals looking to excel in ServiceNow development, with the CAD Certification being a cornerstone of that path.

## Quiz ServiceNow - The Best CAD Valid Exam Practice

There are three formats of Itcerttest practice material. Anyone can try a free demo to assess the quality of our ServiceNow product before buying. The Certified Application Developer-ServiceNow (CAD) PDF file of actual questions, web-based Certified Application Developer-ServiceNow practice exam, and desktop practice test are three formats of Itcerttest. The CAD PDF Questions are printable which means you can do off-screen study.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Access Control debug information identifies whether each element of an Access Control granted or denied access. The elements

appear in the debug information in the order of evaluation. In which order are the elements of an Access Control evaluated?

- A. Conditions, Roles, Script
- B. Conditions, Script, Roles
- C. Roles, Conditions, Script
- D. Script, Conditions, Roles

**Answer: A**

Explanation:

"The sequence is ROLES first, then condition, then script." - Chuck Tomasi says so at this link:

<https://www.servicenow.com/community/grc-forum/order-of-execution-of-an-acl/m-p/1311962/highlight/true#M6538>

#### NEW QUESTION # 59

Which one of the following is NOT a purpose of application scoping?

- A. Provide a relationship between application artifacts
- B. Provide a namespace (prefix and scope name) to prevent cross application name collisions
- C. Provide a way of tracking the user who developed an application
- D. Provide controls for how scripts from another scope can alter tables in a scoped application

**Answer: C**

#### NEW QUESTION # 60

In a Business Rule, which one of the following returns true if the currently logged in user has the admin role?

- A. `gs.hasRole('admin')`
- B. `g_form.hasRoleExactly('admin')`
- C. `gs.hasRoleExactly('admin')`
- D. `g_form.hasRole('admin')`

**Answer: D**

#### NEW QUESTION # 61

Which one of the following is true for GlideUser (`g_user`) methods?

- A. Can be used in Business Rules, and Scripts Includes
- B. Can be used in Business Rules only
- C. Can be used in Client Scripts and UI Policies only
- D. Can be used in Client Scripts, UI Policies, and UI Actions

**Answer: D**

Explanation:

The following is true for GlideUser (`g_user`) methods:

Can be used in Client Scripts, UI Policies, and UI Actions. This is true because GlideUser (`g_user`) methods are part of the client-side scripting APIs that provide information about the current user and the user's preferences. Client Scripts, UI Policies, and UI Actions are all types of client-side scripts that run in the web browser and manipulate the user interface.

The following are not true for GlideUser (`g_user`) methods:

Can be used in Client Scripts and UI Policies only. This is false because GlideUser (`g_user`) methods can also be used in UI Actions, which are another type of client-side scripts that can be triggered by a user's click on a button, link, or choice.

Can be used in Business Rules only. This is false because GlideUser (`g_user`) methods cannot be used in Business Rules, which are server-side scripts that run on the ServiceNow platform and manipulate the database. Business Rules use a different API to access the current user information, which is GlideSystem (`gs`).

Can be used in Business Rules, and Scripts Includes. This is false because GlideUser (`g_user`) methods cannot be used in Business Rules or Script Includes, which are both server-side scripts. Script Includes are reusable units of code that can be called from any server-side script. Script Includes also use GlideSystem (`gs`) to access the current user information. ## NEW QUESTION # 62

What are the features of Flow Designer?

Choose 3 answers

- A. Test a flow using the "Run as" feature
- B. Add stages to a flow
- C. Perform form field data validation at client side
- D. Call a flow from another flow or subflow
- E. Support Java Scripting code to test conditions that trigger the flow. Eg Run a flow from a Catalog item

**Answer: A,B,D**

Explanation:

Flow Designer is a no-code platform capability that lets you automate business processes in a single drag-and-drop design environment. Some of the features of Flow Designer are:

Add stages to a flow: You can define the stages of a flow to track its progress and status. Stages can be used to group actions, subflows, and conditions into logical units.

Call a flow from another flow or subflow: You can reuse existing flows or subflows by calling them from another flow or subflow. This allows you to modularize your automation and avoid duplication of logic.

Test a flow using the "Run as" feature: You can test a flow using the "Run as" feature to specify the user context and input parameters for the flow execution. This helps you to verify the functionality and performance of your flow before publishing it.
