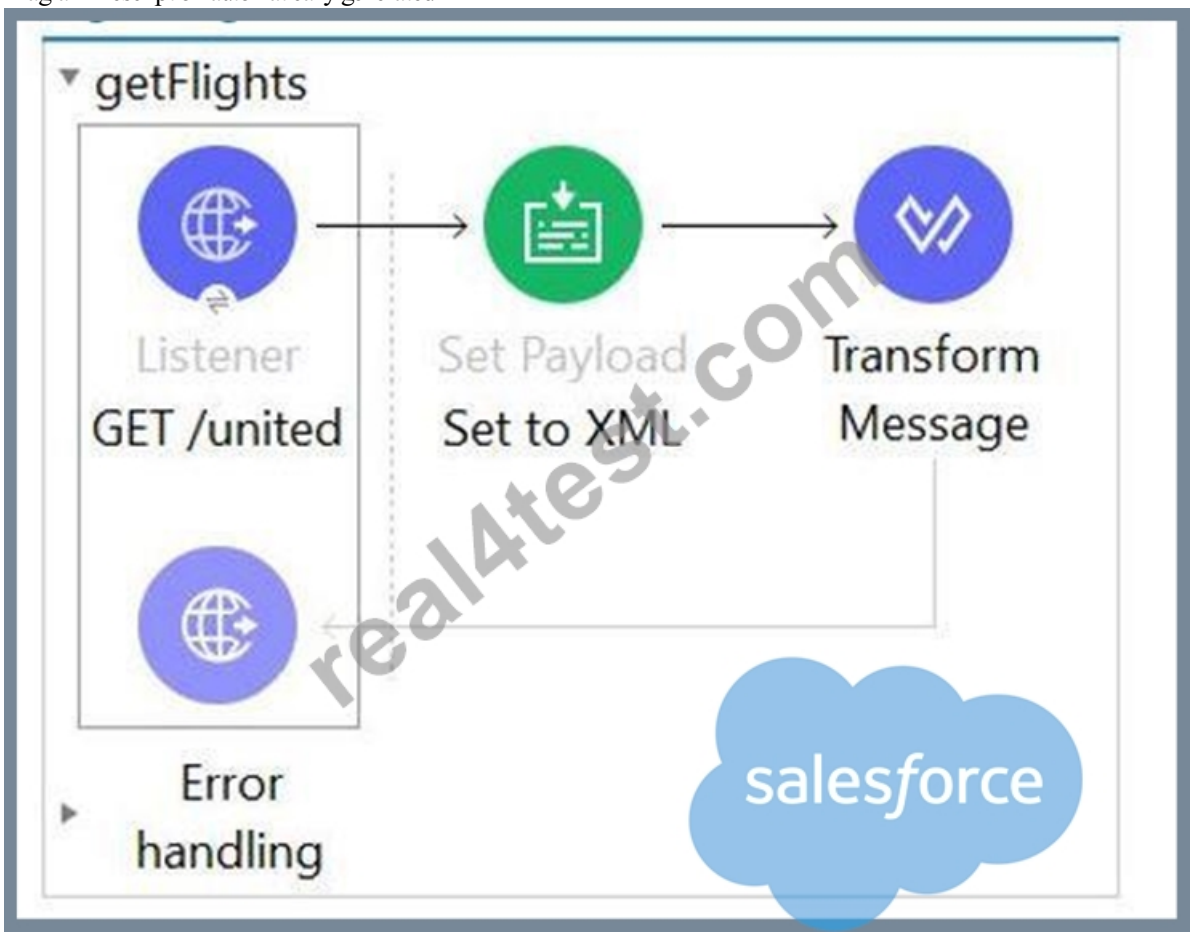
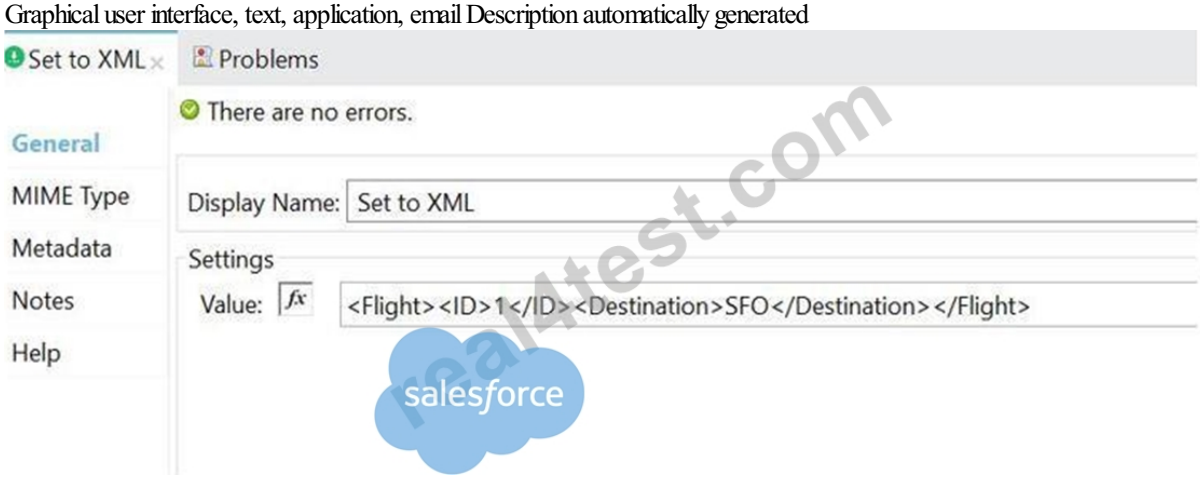
Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q71-Q76):

NEW QUESTION # 71
Refer to the exhibits.

A web client submits a request to below flow. What is the output at the end of the flow?
Diagram Description automatically generated



Graphical user interface, text, application, email Description automatically generated



Graphical user interface, text, application, email Description automatically generated

```
    <flow name="getFlights" doc:id="f89731e6-ea03-4d69-a66c-df99584e7c08" >
        <http:listener doc:name="GET /united" doc:id="f331134b-91f8-4c18-8b98-7d5a8ecd4c5b" config-ref="
        <set-payload value="&lt;Flight&gt;&lt;ID&gt;1&lt;/ID&gt;&lt;Destination&gt;SFO&lt;/Destination&g
        <ee:transform doc:name="Transform Message" doc:id="3de3829e-843c-41cf-94fd-5b2ead45f9af" >
            <ee:message >
                <ee:set-payload ><![CDATA[%dw 2.0
output application/json
---
typeOf(payload)
]]></ee:set-payload>
            </ee:message>
        </ee:transform>

</flow>
```

- A. Java
- B. Object

- C. String
- D. XML

Answer: C

Explanation:
String is the correct answer as XML is of an Object type String

NEW QUESTION # 72
Refer to the exhibits.

```
http://www.mulesoft.org/schema/mule/http http://www.mulesoft.org/schema/mule/http/current/mule-http.xsd http://ww
    <http:listener-config name="HTTP_Listener_config_2222"
                          doc:name="HTTP Listener config"
                          doc:id="c79e8446-0a5f-47f8-921f-b0af7fdd120c">
        <http:listener-connection host="0.0.0.0"
                                  port="2222"/>
    </http:listener-config>
    <http:listener-config name="HTTP_Listener_config_3333"
                          doc:name="HTTP Listener config"
                          doc:id="7270c604-9c86-464a-9962-6530e1168b01">
        <http:listener-connection host="0.0.0.0"
                                  port="3333"/>
    </http:listener-config>
</mule>
```

Larger image

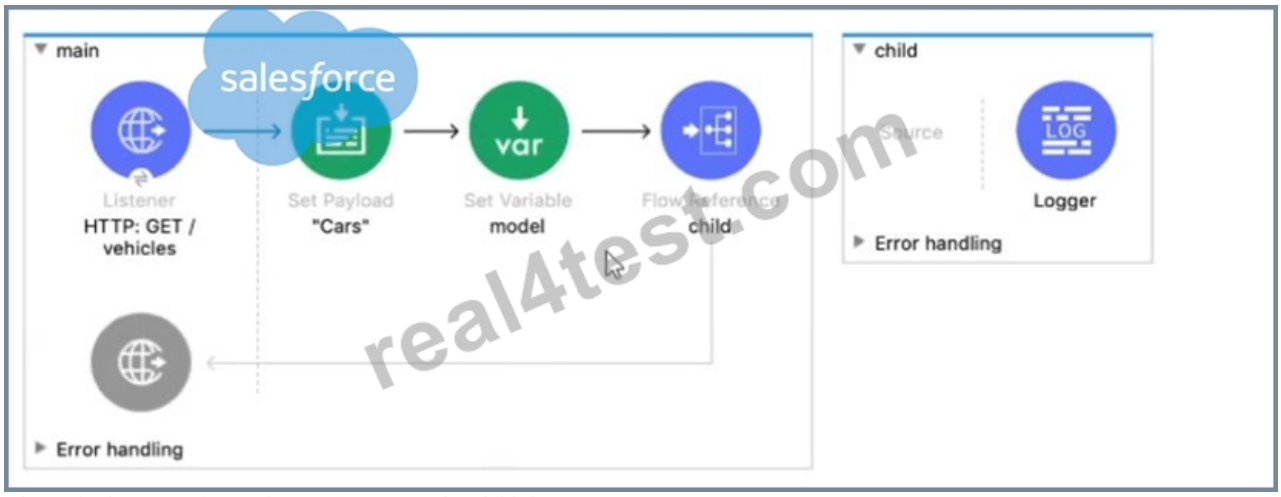
The Mule application configures and uses two HTTP Listener global configuration elements.
Mule application is run in Anypoint Studio.
If the mule application starts correctly, what URI and port numbers can receive web client requests? If the mule applications fails to start , what is the reason for the failure?

- A. The mule application fails to start because of the port binding conflict as HTTP request also use same port i.e. 3333
- B. The mule application start successfully
  Web client requests can be received at URI on port 2222 and on port 3333.
- C. The mule application fails to start
  There is URL path conflict because both HTTP Listeners are configured with same path
- D. The mule application start successfully
  Web client requests can only be received at URI on port 2222 but not on port 3333

Answer: B

Explanation:
In this case both the flows can start without any error and requests can be received on both ports. Flow names httpListener1 can call other flow using HTTP request without any issues.
Hence correct answer is
The mule application start successfully
Web client requests can be received at URI on port 2222 and on port 3333.
Lets check why other options are incorrect
1) The mule application fails to start. There is URL path conflict because both HTTP Listeners are configured with same path ---- This is incorrect as port value is different in both listeners
2) The mule application start successfully. Web client requests can only be received at URI on port 2222 but not on port 3333 --- This is incorrect as there is no reason for not receiving requests on port 3333
3) The mule application fails to start because of the port binding conflict as HTTP request also use same port i.e. 3333 --- Port binding conflict will not happen in this case. It would have if both listener configurations would have been on same port . But that is not the case here.
Mule Ref Doc : HTTP Listener Reference - Mule 4 | MuleSoft Documentation

NEW QUESTION # 73
Refer to the exhibits.



The main flow contains a Flow Reference to the child flow.
A web client sends a GET request to the main flow's HTTP Listener that includes a make query parameter.
What values are accessible in the child flow?

- A. payload
- B. payload
  make query param model var
- C. payload
  model var
- D. payload
  make query param

Answer: B

NEW QUESTION # 74
An app team is developing a mobile banking app. It took them two months to create their own APIs to access transaction information from a central database. The app team later found out that anotherteam had already built an API that accesses the transaction information they need.
According to MuleSoft, what organization structure could have saved the app team two months of development time?

- A. Center of Excellence
- B. MuleSoft Support Center
- C. Center for Enablement
- D. Central API Review Board

Answer: C

Explanation:
Reference:https://blogs.mulesoft.com/biz/connectivity/what-is-a-center-for-enablement-c4e/ Center for Enablement is correct answer .It is a cross-functional team#typically staffed with members from central IT, line-of-business departments, and digital innovation teams#charged with productizing, publishing, and harvesting reusable assets and best practices. In this case , app team would have checked first with Center for Enablement before developing their own API's. Hence could have avoided re-work

NEW QUESTION # 75
How are query parameters dynamically passed to an outbound REST request using an HTTP Request operation?

- A. As URI parameters in the HTTP Request operation
- B. As query parameters in the HTTP Request operation
- C. As flow variables
- D. In the Mule event's payload

Answer: B

Explanation:

In General > Request > Query Parameters, click the plus icon (+) to add a parameter to a request. Type a name and value for the parameter or use a DataWeave expression to define the name and value.
