### **NEW QUESTION # 27**

Refer to the exhibit. Which code snippet must be placed onto the box in the script to configure an OSPF process on a Cisco IOS XR router?

□

- A.
- B.
- C.
- D.

**Answer: B**

Explanation:

Chosen option uses the correct parameters for manager.connect, assigns the OSPF configuration XML to the config argument, and commits the candidate configuration. This matches the setup and variable names defined in the script, ensuring the OSPF process is configured on a Cisco IOS XR router.

### **NEW QUESTION # 28**

□ Refer to the exhibit. XTC has been configured by an engineer. What does the IPv4 address represent on the snippet?

### **NEW QUESTION # 29**

Refer to the exhibit. A network engineer is configuring dial-out model-based telemetry on Cisco IOS XR. The telemetry server receives an event, but the payload cannot be parsed correctly.

What is the issue?

□

- A. The protocol configured in the destination-group needs to be udp.
- B. The sample-interval configuration is too short.
- C. IPv4 addressing is not supported and cannot be used
- D. Encoding configuration in the destination-group is incorrect

**Answer: D**

Explanation:

The encoding is set to gpb (Google Protocol Buffers), but if the collector is expecting a different format (like JSON or XML), the payload cannot be parsed. The encoding in the destination group must match the format expected by the telemetry server/collector.
