問題 #29

An administrator is issuing the following command on a node trying to join a FortiSOAR cluster as a standby: `csadm ha join-cluster -status active -role secondary --primary-node 10.0.1.160` The node fails to join the cluster. What is the issue?

- A. The role value should be worker.
- B. The IP address should be for secondary-node Instead of primary-node.
- C. The primary node needs to be resolvable via FQDN.
- **D. The status value should be passive.**

答案: D

解題說明:

When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup. In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

問題 #30

Which service on FortiSOAR is the playbook scheduler?

- A. uwsgi
- **B. colcrybeatsd**
- C. celeryd
- D. cyops-torccat

答案: B

解題說明:

In FortiSOAR, the service responsible for the playbook scheduling functionality is colcrybeatsd. This service manages the timing and execution of scheduled playbooks, allowing for the automation of various tasks at specified intervals. It ensures that playbooks execute according to their configured schedules, which can include tasks such as data ingestion, threat detection, or incident response actions. Proper functioning of this service is essential for the reliable automation of time-dependent processes within FortiSOAR.

問題 #31

An administrator is issuing the following command on a node trying to join a FortiSOAR cluster as a standby: `csadm ha join-cluster --status active -role secondary --primary-node 10.0.1.160` The node fails to join the cluster. What is the issue?

- A. The role value should be worker.
- B. The IP address should be for secondary-node Instead of primary-node.
- C. The primary node needs to be resolvable via FQDN.
- **D. The status value should be passive.**

答案： D

解題說明：

When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup.

In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

問題 #32

Which two ports must be open between FortiSOAR HA nodes'? (Choose two.)

- A. Port 5432
- B. Port 6380
- C. Port 9200
- D. Port 25

答案： A,C

解題說明：

In a FortiSOAR HA configuration, certain ports must be open for communication between nodes. Port 5432 is required for PostgreSQL database communication, which is essential for data replication between HA nodes.

Port 9200 is used by Elasticsearch, which FortiSOAR leverages for indexing and search functions across the nodes. These ports must be accessible between nodes to ensure seamless operation and data consistency within the cluster.

問題 #33

What are two different services that you can configure for monitoring system and cluster health statuses on FortiSOAR? (Choose two.)

- A. Exchange
- B. POP
- C. IMAP
- D. SMTP

答案： A,D
