NEW QUESTION # 107
When creating a new test set in UiPath Orchestrator, what is the purpose of using a wildcard symbol (*) for the project version?

- A. Any project version starting with 1.0. will be used.
- B. A validation error will be displayed after clicking on the Next button.
- C. The first project version starting with 1.0. will be used.
- D. The latest project version starting with 1.0. will be used.

Answer: D

Explanation:
In UiPath Orchestrator, using a wildcard symbol (*) in the project version (e.g., 1.0.*) means that the latest available version that starts with 1.0. will be used when the test set is executed. This helps ensure the most recent compatible package is always selected.

NEW QUESTION # 108
A developer needs to design a coded automation that approves or denies a loan application based on the loan rate. How should the Execute() entry point method be declared if it needs to return the value for (IsLoanApproved), based on the loan rate (LoanRate)?

- A. public (int LoanRate) Execute(bool IsLoanApproved)
- B. public (bool IsLoanApproved) Execute(int LoanRate)
- C. public bool Execute (bool IsLoanApproved, int loanRate)
- D. public int Execute (bool IsLoanApproved)

Answer: C

Explanation:
The correct method signature for a coded automation in UiPath that needs to process input (loanRate) and return a value (IsLoanApproved) is:
public bool Execute(bool IsLoanApproved, int loanRate)
This follows the standard format where input parameters are passed to the method, and the result is returned via the method's return type.
