Pass Guaranteed 2026 Microsoft Reliable MB-820: Microsoft Dynamics 365 Business Central Developer Preparation Store

Elaborately designed and developed MB-820 test guide as well as good learning support services are the key to assisting our customers to realize their dreams. Our MB-820 study braindumps have a variety of self-learning and self-assessment functions to detect learners' study outcomes, and the statistical reporting function of our MB-820 test guide is designed for students to figure out their weaknesses and tackle the causes, thus seeking out specific methods dealing with them. Our MB-820 exam guide have also set a series of explanation about the complicated parts certificated by the syllabus and are based on the actual situation to stimulate exam circumstance in order to provide you a high-quality and high-efficiency user experience. In addition, the MB-820 Exam Guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our MB-820 test guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable MB-820 study braindumps, you will find more interests in them and experience an easy learning process.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q82-Q87):

NEW QUESTION # 82

You need to populate the Incident Date and Status fields in the Room Incident table.

Which instructions or trigger should you use? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point

Answer:

Explanation:

□ Explanation:

* Instructions to use for Incident Date and Status fields:

* The correct instruction is "Incident Date" := Workdate(); "Status" := Status::Open. This ensures that when a new record is created, the Incident Date is set to the current work date, and the Status field is initialized to 'Open'. This is essential for ensuring that the incident data is always timestamped and correctly marked upon creation.

* Trigger to introduce the function:

* The correct trigger is Trigger OnModify. This trigger ensures that when a record is modified, such as when an update to the status is made (e.g., from Open to Closed), the necessary logic will be executed to handle the update of fields like Incident Date and Status.

Step-by-Step References:

* Workdate Function in AL

* Triggers in AL

NEW QUESTION # 83

A company has the following custom permission set:

□ You need to make the permission set visible on the Permission Sets page.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

□

Answer:

Explanation:

□ Explanation:

To make the permission set visible on the Permission Sets page, perform the following actions in sequence:

* Change the Assignable property value to true.

* Add the ObsoleteState = No property.

* Publish the app with the permission set to an environment.

Process for making permission sets visible: In Business Central, the Assignable property determines whether a permission set is shown in the user interface for assigning to users. By default, if Assignable is set to false, the permission set is hidden. Therefore, it should be set to true to make the permission set visible.

The ObsoleteState property indicates whether an object is outdated (Obsolete) or not (No). If an object is marked as obsolete, it is typically hidden from the user interface. Therefore, setting ObsoleteState = No ensures that the permission set is not treated as outdated and remains visible.

Finally, publishing the app with the permission set to an environment updates the environment with the new or modified objects, including permission sets, making them available for assignment to users.

NEW QUESTION # 84

You need to select the appropriate page types to solve the reporting requirements.

Which page types should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□

NEW QUESTION # 85

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

A company plans to optimize its permission sets.

The company has the following permission sets:

You need to provide the following implementation for a third permission set:

- * Create a new Permission Set C that is a composite of Permission Set A and Permission Set B.
- * Assign Permission Set C to a user.

You need to ensure that the user has only read access to the Job table.

Solution: Set the Included Permission Sets property to Permission Set B and the Excluded PermissionSets property to Permission Set A.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 86

You are creating a new Business Central report.

You plan to use triggers and functions to dynamically create a dataset and control the report behavior.

You must provide the following implementation.

- * Run when the report is loaded.
- * Run when the data item is iterated for the last time.
- * Skip the rest of the report.

You need to select the triggers and functions for the report.

Which triggers and functions should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

* Runs when the report is loaded: OnInitReport

* Runs when the data item has been iterated for the last time: OnPostDataItem

* Use this function to skip the rest of the report: CurrReport.Quit()

1. Requirement: Runs when the report is loaded.

* Selection: OnInitReport

* Reasoning: The OnInitReport trigger is the very first event that fires when the report object is instantiated (loaded). It runs before the request page is displayed, making it the correct choice for "when the report is loaded."

* Contrast: OnPreReport runs after the request page, just before the data processing starts.

2. Requirement: Runs when the data item has been iterated for the last time.

* Selection: OnPostDataItem

* Reasoning: The OnPostDataItem trigger executes immediately after the report has finished iterating through all records belonging to that specific data item.

* Contrast: OnPreDataItem runs before the loop starts, and OnAfterGetRecord runs repeatedly during the loop (for every record).

3. Requirement: Use this function to skip the rest of the report.

* Selection: CurrReport.Quit()

* Reasoning: The CurrReport.Quit() function completely aborts the execution of the report, effectively "skipping" everything else remaining in the report logic.

* Contrast: CurrReport.Skip() only skips the current record processing and moves to the next record. CurrReport.Break() exits the current data item loop but proceeds to the next data item (if any) or finishes the report normally.

NEW QUESTION # 87

.....

In the industry, MB-820 certifications have acknowledged respect that leads the certified professionals to the best work positions as per their career objectives. We materialize your dreams by offering you the top dumps. We help you sow the seeds for success. The comprehensive study content of our VCE4Dumps's MB-820 Dumps PDF is enough to cater all of your exam needs just at one spot.
