Guarantee To Pass NCP-MCI-5.15 Nutanix Certified Professional - Multicloud Infrastructure (v5.15) Exam Successfully

NCP-MCI-5.15 Exam Questions

226Q&As

Real NCP-MCI-5.15 screenshot exam questions with 100% Passing Guarantee, as well as offering Instant download NCP-MCI-5.15 study guide, 1-Year Free Update, Money-Back Policy.

<https://www.itexamshop.com/questions/ncp-mci-5-15-exam-questions/>

Active 37% discount online are available for all IT certification exam questions. During the process of making an order, the discount will be automatically taken effect.

People always want to prove that they are competent and skillful in some certain area. The ways to prove their competences are varied but the most direct and convenient method is to attend the NCP-BC-7.5 certification exam and get some certificate. Passing the NCP-BC-7.5 certification can prove that you are very competent and excellent and you can also master useful knowledge and skill through passing the NCP-BC-7.5 test. Purchasing our NCP-BC-7.5 guide torrent can help you pass the NCP-BC-7.5 exam and it costs little time and energy.

For candidates who are going to prepare for the exam, they may need the training materials. The quality may be their first concern. NCP-BC-7.5 exam bootcamp of us is famous for the high-quality, and if you buy from us, you will never regret. We also pass guarantee and money back guarantee if you fail to pass the exam. In addition, we adopt international recognition third party for the payment of NCP-BC-7.5 Exam Dumps. Therefore, the safety of your money and account can be guarantee. Choose us, and you will never regret.

NCP-BC-7.5 Sample Questions | New NCP-BC-7.5 Exam Format

Our company sells three kinds of NCP-BC-7.5 guide torrent online whose contents are definitely same as each other. The PDF format of NCP-BC-7.5 exam torrent is easy to download, prints, and browse learning, which can be printed on paper and can make notes anytime. SOFT/PC test engine of NCP-BC-7.5 Exam applies to Windows system computers. It can simulate the real

operation test environment. App/online test engine of the NCP-BC-7.5 guide torrent can be used on all kinds of electronic devices.

Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 Sample Questions (Q50-Q55):

NEW QUESTION # 50

An administrator at a retail company is preparing to apply a critical OS security patch to a production SQL Server VM. Before starting, the administrator ensures the VM is part of a Protection Domain and manually creates a local snapshot (Recovery Point). Ten minutes after the patch is applied, the SQL service fails to start, and the database logs indicate corruption in the system registry. The administrator needs to return the VM to its functional state from ten minutes ago as quickly as possible. The administrator decides to perform a Restore from the local snapshot. Under which condition would an In-place Restore (Revert) fail, forcing the administrator to use the Clone (Out-of-place) option instead?

- A. The VM is currently powered on and cannot be shut down.
- B. NGT (Nutanix Guest Tools) version was updated immediately after the snapshot.
- C. The VM's memory was increased from 16GB to 32GB to accommodate the patch installation.
- **D. A new 50GB data disk was added to the VM configuration after the snapshot was taken.**

Answer: D

NEW QUESTION # 51

An administrator is concerned about the operational overhead of manually creating and managing categories across both the primary and recovery sites to ensure Recovery Plans function correctly during failover and failback. What Nutanix Disaster Recovery behavior minimizes this concern?

- **A. Categories are automatically synchronized to the recovery site AZ when they are specified in a Recovery Plan.**
- B. Categories must be manually replicated using the Prism Central API between sites to ensure consistency.
- C. Categories only need to be configured at the recovery site since that is where failover operations are executed.
- D. Recovery Plans replicate categories only during an active failover event to minimize replication traffic.

Answer: A

Explanation:

Nutanix Disaster Recovery (formerly known as Leap) utilizes Prism Central-based "Categories" to group virtual machines for protection. These categories are used within Protection Policies to determine replication schedules and within Recovery Plans to determine power-on sequences and network mappings. A common operational concern is the need to manually replicate these category definitions across different availability zones (AZs).

To reduce this operational overhead, Nutanix has implemented an automatic synchronization mechanism.

When an administrator creates a Recovery Plan in Prism Central and specifies certain categories for failover, the system automatically synchronizes the definition and metadata of those categories to the paired recovery AZ. This ensures that if the primary Prism Central instance becomes unavailable, the recovery site already possesses the necessary grouping logic to identify and recover the correct virtual machines. This "policy-driven" approach ensures consistency across sites and eliminates the risk of human error associated with manual configuration (Option B). By automating the lifecycle of categories between paired sites, Nutanix ensures that the disaster recovery environment is always aligned with the production environment, allowing for seamless failover and failback operations without the need for repetitive administrative tasks.

NEW QUESTION # 52

An administrator is migrating from a Protection Domain-based deployment to a Prism Central (PC)-based deployment. What occurs if a snapshot is deleted before the protection policy is applied to the migrated entities?

- A. PC automatically recreates the deleted snapshot using the new configuration.
- B. The migration will automatically fail and will revert all entities to the original Protection Domain.
- C. PC pauses the migration until the snapshot is manually restored from a backup.
- **D. The recovery points associated with that snapshot won't be available for the deployment.**

Answer: D

Explanation:

Migrating from legacy Protection Domains to modern Prism Central Protection Policies involves transitioning the management of

virtual machine snapshots. During this process, the historical snapshots created by the Protection Domain are often intended to be "claimed" or utilized by the new PC-based system as valid recovery points.

Snapshots are point-in-time references to data on the storage tier. If a snapshot is deleted from the cluster before the migration to Protection Policies is finalized, the underlying data blocks associated with that specific point in time may be reclaimed by the system's garbage collection process. Consequently, the recovery points that were associated with that deleted snapshot will no longer be available for use within the new deployment. The system cannot "automatically recreate" (Option A) a deleted snapshot because the exact historical state of the data is lost once the snapshot is purged. The migration itself typically continues for the remaining valid data, but the loss of historical recovery points could impact the business's ability to restore to specific past dates. This highlights the importance of data retention awareness during management-plane migrations.

NEW QUESTION # 53

An administrator needs to provide the QA team with a VM state from four days ago to test an older browser version. However, the current production VM contains new application code and security patches that must not be deleted or overwritten. Which restore operation should the administrator perform to meet this requirement?

- A. Out-of-place Restore (Clone)
- B. Disk-level Attach from Snapshot
- C. In-place Restore (Revert)
- D. Self-Service Restore (SSR)

Answer: D

Explanation:

Nutanix offers several ways to recover data, ranging from full VM reverts to granular file-level access. In this scenario, the key requirement is to access historical data (from four days ago) without modifying or destroying the current production VM's state. Self-Service Restore (SSR) is the most efficient and least disruptive method to achieve this. SSR, which requires Nutanix Guest Tools (NGT) to be installed, allows an administrator or user to mount a historical snapshot disk directly to the existing VM as a new, temporary volume. This allows the QA team to browse the file system of the "four-day-old" state and copy the specific older browser version they need while the production application continues to run undisturbed with its new code and patches. An "In-place Restore" (Option C) would be disastrous here because it would roll back the entire VM, overwriting the new patches. A "Clone" (Option D) would work but is less efficient as it consumes additional vCPU, RAM, and full storage overhead for an entirely new VM. SSR provides the surgical precision needed for file-level testing while maintaining the integrity of the live production environment.

NEW QUESTION # 54

An administrator executes a Recovery Plan for a set of high-performance VMs configured with SR-IOV network adapters. The VMs failover successfully to the Recovery Cluster.

What is the state of these VMs immediately after the planned failover completes?

- A. The VMs are recovered in a powered-off state, and the SR-IOV profile is removed.
- B. The failover fails during the validation phase because SR-IOV VMs cannot be protected.
- C. The VMs are powered on, and SR-IOV is active.
- D. The VMs are powered on, but SR-IOV is disabled and replaced with a standard virtio-net adapter.

Answer: D

Explanation:

Single Root I/O Virtualization (SR-IOV) allows a virtual machine to bypass the hypervisor's virtual switch and communicate directly with a physical network adapter's virtual functions. This is commonly used for high-performance applications that require extremely low latency and high throughput. However, SR-IOV creates a "hard" dependency between the virtual machine and the specific physical hardware (NIC) of the host it is running on.

Disaster Recovery involves moving a VM to an entirely different cluster, which likely has different physical network adapters or a different SR-IOV configuration. Nutanix Disaster Recovery orchestration is designed to ensure that VMs can always boot at the recovery site, even if specialized hardware resources are unavailable.

For VMs configured with SR-IOV, the recovery process includes a built-in fallback mechanism. During failover, the system will recover the VM and power it on, but it will disable the SR-IOV attachment. To ensure connectivity, it automatically adds or falls back to a standard virtio-net virtual adapter. This allows the VM to have network access immediately, though at a potentially lower performance level. The administrator must then manually re-configure SR-IOV at the recovery site if the local hardware supports it. This design prioritizes service availability (powering on and communicating) over specialized hardware performance during a disaster.

recovery event.

NEW QUESTION # 55

.....

In order to meet the time requirement of our customers, our experts carefully designed our NCP-BC-7.5 test torrent to help customers pass the exam in a lot less time. We hope everyone can prepare for their exam with minimal time investment. If you purchase our Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 guide torrent, we can make sure that you just need to spend twenty to thirty hours on preparing for your exam before you take the exam, it will be very easy for you to save your time and energy. So do not hesitate and buy our NCP-BC-7.5 study torrent, we believe it will give you a surprise, and it will not be a dream for you to pass your Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 exam and get your certification in the shortest time.

NCP-BC-7.5 Sample Questions: <https://www.testsimulate.com/NCP-BC-7.5-study-materials.html>

Nutanix Current NCP-BC-7.5 Exam Content If you do not have a PayPal account, you can pay with Credit/Debit Card (Visa, MasterCard, American Express, and Discover), In today's world, getting a NCP-BC-7.5 Sample Questions - Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 exam certification is a distinct competitive advantage for most workers, Therefore, after buying our NCP-BC-7.5 study guide, if you have any questions about our NCP-BC-7.5 learning materials, please just feel free to contact with our online after sale service staffs, Nutanix Current NCP-BC-7.5 Exam Content We offer you free update for 365 days after purchasing.

This will save you time and help focus your thinking, Current NCP-BC-7.5 Exam Content He is the founder of Rubberbug, a Los Angeles based animation studio specializing in character animation, If you do not have a PayPal account, NCP-BC-7.5 you can pay with Credit/Debit Card (Visa, MasterCard, American Express, and Discover).

Pass Guaranteed NCP-BC-7.5 - Unparalleled Current Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 Exam Content

In today's world, getting a Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 exam certification is a distinct competitive advantage for most workers, Therefore, after buying our NCP-BC-7.5 study guide, if you have any questions about our NCP-BC-7.5 learning materials, please just feel free to contact with our online after sale service staffs.

We offer you free update for 365 days after purchasing, We provide our valuable customers to try a demo before their purchase to test all features of the Nutanix NCP-BC-7.5 certification exam product confidently.
