ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q41-Q46):

NEW QUESTION # 41

What term describes the trust establishment process, wherein the first organization relies on a body of evidence presented to the second organization, and the level of trust is contingent upon the degree and quality of evidence provided by the initiating organization?

- A. Mediated trust
- B. Mandated trust
- C. Direct historical trust
- **D. Validated trust**

Answer: D

Explanation:

The scenario describes a trust establishment process where one organization bases its trust in another on the degree and quality of evidence that the second organization provides. This concept is known as Validated Trust.

Validated Trust is built through the verification and assessment of presented evidence such as certifications, security audits, compliance documentation, or past performance. The higher the credibility and quality of the evidence, the greater the level of trust established.

This type of trust is evidence-based, meaning it does not rely solely on previous interactions or third-party mediation but on verifiable proof provided directly between the entities involved.

Why the Other Options Are Incorrect:

* A. Mandated Trust: This is imposed by regulation, policy, or authority. It is not based on evidence but on obligation or requirement.

* B. Direct Historical Trust: This trust is formed from prior experiences and a consistent history of interactions between the entities. It does not depend on new evidence or documentation.

* D. Mediated Trust: This form of trust is established through an intermediary (such as a trusted third party or certificate authority) who vouches for the credibility of one organization to another.

Conclusion:

The process where trust is established based on the degree and quality of evidence provided by one party is known as Validated Trust.

Final Answer: C. Validated Trust

Explanation Reference (Based on CTIA Study Concepts):

According to the CTIA study topics under "Information Sharing and Trust Establishment," validated trust is the level of confidence gained through verification of tangible evidence, certifications, or attestations demonstrating security assurance and reliability.

NEW QUESTION # 42

Sean works as a threat intelligence analyst. He is assigned a project for information gathering on a client's network to find a potential threat. He started analysis and was trying to find out the company's internal URLs, looking for any information about the different departments and business units. He was unable to find any information.

What should Sean do to get the information he needs?

- A. Sean should use website mirroring tools such as HTTrack Web Site Copier to find the company's internal URLs
- B. Sean should use e-mail tracking tools such as EmailTrackerPro to find the company's internal URLs
- C. Sean should use WayBackMachine in Archive.org to find the company's internal URLs
- **D. Sean should use online services such as netcraft.com to find the company's internal URLs**

Answer: D

Explanation:

The goal is to find internal URLs and information about the company's departments and business units.

Since Sean could not find this data directly from public searches, he should turn to online reconnaissance services that provide details about a website's subdomains, internal URLs, hosting structure, and related information.

Netcraft.com is a well-known online reconnaissance and intelligence-gathering service used by security analysts to gather information such as:

* Website structure and internal subdomains

- * Server details and operating systems
- * Hosting provider and IP ranges
- * Technology stack and SSL certificate data
- * Historical hosting changes and DNS information

Using Netcraft, Sean can discover internal URLs and subdomains that may reveal internal departments or services linked to the main organization's domain. This type of open-source intelligence (OSINT) is valuable for both threat hunting and vulnerability assessment.

Why the Other Options Are Incorrect:

- * A. WayBackMachine (Archive.org): Useful for viewing historical versions of web pages, but it typically shows public pages, not internal or hidden URLs.
- * B. Email tracking tools (EmailTrackerPro): These are designed to trace email origins and headers, not to discover website URLs or internal structures.
- * C. Website mirroring tools (HTTrack): These tools copy the visible contents of a website but do not reveal hidden internal URLs unless they are publicly linked.

Conclusion:

The correct method for Sean to identify internal URLs and subdomains of the target company is by using online services such as Netcraft.com.

Final Answer: D. Sean should use online services such as netcraft.com to find the company's internal URLs Explanation Reference (Based on CTIA Study Concepts):

According to CTIA study material on Footprinting and Reconnaissance, Netcraft is an effective OSINT- based platform used for discovering detailed website information, including subdomains, server data, and hosting infrastructure.

NEW QUESTION # 43

In which of the following forms of bulk data collection are large amounts of data first collected from multiple sources in multiple formats and then processed to achieve threat intelligence?

- A. Hybrid form
- B. Production form
- C. Unstructured form
- D. Structured form

Answer: C

Explanation:

In the context of bulk data collection for threat intelligence, data is often initially collected in an unstructured form from multiple sources and in various formats. This unstructured data includes information from blogs, news articles, threat reports, social media, and other sources that do not follow a specific structure or format.

The subsequent processing of this data involves organizing, structuring, and analyzing it to extract actionable threat intelligence. This phase is crucial for turning vast amounts of disparate data into coherent, useful insights for cybersecurity purposes. References:

NEW QUESTION # 44

A threat analyst wants to incorporate a requirement in the threat knowledge repository that provides an ability to modify or delete past or irrelevant threat data.

Which of the following requirement must he include in the threat knowledge repository to fulfil his needs?

- A. Searchable functionality
- B. Protection ranking
- C. Data management
- D. Evaluating performance

Answer: C

Explanation:

Incorporating a data management requirement in the threat knowledge repository is essential to provide the ability to modify or delete past or irrelevant threat data. Effective data management practices ensure that the repository remains accurate, relevant, and up-to-date by allowing for the adjustment and curation of stored information. This includes removing outdated intelligence, correcting inaccuracies, and updating information as new insights become available. A well-managed repository supports the ongoing relevance

and utility of the threat intelligence, aiding in informed decision-making and threat mitigation strategies.
