

1Z0-1151-25최신버전인기덤프, 1Z0-1151-25시험패스가능한인증공부

참고: Itcertkr에서 Google Drive로 공유하는 무료 2026 Oracle 1Z0-1151-25 시험 문제집이 있습니다:
https://drive.google.com/open?id=1Y7msWAvvURWBcEstW4kLo23pzPULd_1A

Oracle 1Z0-1151-25인증덤프는 최근 출제된 실제시험문제를 바탕으로 만들어진 공부자료입니다. Oracle 1Z0-1151-25 시험문제가 변경되면 제일 빠른 시일내에 덤프를 업데이트하여 최신버전 덤프자료를 Oracle 1Z0-1151-25덤프를 구매한 분들께 보내드립니다. 시험탈락시 덤프비용 전액환불을 약속해드리기에 안심하시고 구매하셔도 됩니다.

Oracle 1Z0-1151-25 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
주제 2	<ul style="list-style-type: none">Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
주제 3	<ul style="list-style-type: none">Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

주제 4	<ul style="list-style-type: none"> Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
주제 5	<ul style="list-style-type: none"> Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

1Z0-1151-25시험패스 가능한 인증공부, 1Z0-1151-25높은 통과율 시험덤프

IT자격증을 많이 취득하여 IT업계에서 자신만의 단단한 자리를 보장하는것이 여러분들의 로망이 아닐가 싶습니다. Itcertkr의 완벽한 Oracle인증 1Z0-1151-25덤프는 IT전문가들이 자신만의 노하우와 경험으로 실제Oracle인증 1Z0-1151-25시험문제에 대비하여 연구제작한 완벽한 작품으로서 100%시험통과율을 보장합니다.

최신 Oracle Cloud Infrastructure 1Z0-1151-25 무료샘플문제 (Q47-Q52):

질문 # 47

Which is a database service that CANNOT be provisioned in the Oracle Public Cloud?

- A. Autonomous Database on Dedicated Infrastructure
- B. Exadata Database Service on Shared Infrastructure
- C. Autonomous Database on Shared Infrastructure
- D. Exadata Database Service on Dedicated Infrastructure**

정답: **D**

설명:

The "Oracle Public Cloud" typically refers to OCI's broadly accessible cloud services. Autonomous Database on Shared (Option A) and Dedicated Infrastructure (Option B) are available in OCI. However, Exadata Database Service on Dedicated Infrastructure (Option C) is not a standard offering in the public OCI context-it's tied to specific deployments like Database@Azure or on-premises Exadata, not the public cloud. Option D is fictitious. Oracle's documentation clarifies Exadata's dedicated nature outside standard public offerings.

질문 # 48

How do you ensure that traffic between your OCI VCN and Azure Virtual Network uses the interconnect and not the public internet?

- A. Enable private peering between the VCN and the Virtual Network.
- B. Configure security lists in both OCI and Azure to block traffic over the internet.
- C. Disable public IP addresses on instances in both environments.
- D. Configure route tables in both OCI and Azure to prioritize routes through the interconnect.**

정답: **D**

설명:

Here's why:

Route tables are the core mechanism for controlling network traffic flow within both OCI and Azure. To ensure traffic uses the interconnect (like FastConnect/ExpressRoute), you need to configure the route tables to direct traffic destined for the other cloud provider's address space through the interconnect.

OCI Route Tables: In OCI, you'd create a route rule in your VCN's route table that directs traffic destined for the Azure Virtual

Network's address space (e.g., a specific CIDR block) to the Dynamic Routing Gateway (DRG) that is connected to your FastConnect circuit.

Azure Route Tables: In Azure, you'd configure a route in your Virtual Network's route table that directs traffic destined for the OCI VCN's address space to the ExpressRoute gateway.

By configuring these routes, you explicitly tell the networks to use the private, dedicated connection for communication between the two clouds.

Why the other options are not sufficient or correct:

A). Configure security lists in both OCI and Azure to block traffic over the internet: Security lists (or Network Security Groups in Azure) control access based on ports and protocols, but they don't control routing. Blocking internet traffic would prevent instances from accessing the internet, but it wouldn't force traffic to use the interconnect. The routing decision happens before the security list rules are evaluated.

C). Disable public IP addresses on instances in both environments: Disabling public IPs prevents direct internet access to the instances, but it doesn't guarantee that traffic will use the interconnect. Without proper routing, the instances wouldn't be able to communicate with each other at all.

D). Enable private peering between the VCN and the Virtual Network: "Private peering" is a general term and doesn't fully describe the required configuration. While the interconnect is a form of private peering, it's the route table configuration that actually directs traffic over that private connection. Simply enabling the interconnect isn't enough; you must configure the routing.

질문 #49

which of the following components is primarily responsible for managing the BGP peering and dynamic route exchange between the two cloud environments?

- A. OCI Customer-Premises Equipment (CPE) and Google Cloud Router
- B. OCI FastConnect and Google Cloud Partner Interconnect
- C. OCI Dynamic Routing Gateway (DRG) and Google Cloud Virtual Private Cloud (VPC) Network
- D. OCI Virtual Cloud Network (VCN) and Google Cloud Interconnect Attachment

정답: A

설명:

While the wording is a little tricky (OCI doesn't require physical CPE in this cloud-to-cloud scenario), the concept is correct. Here's why:

OCI's "CPE" in this context: In a traditional on-premises to OCI FastConnect setup, you would have physical CPE (Customer-Premises Equipment) that terminates the FastConnect connection and establishes BGP sessions with the OCI DRG. In a cloud-to-cloud scenario like Oracle Interconnect for Google Cloud, the function of the CPE is handled by Oracle's network infrastructure at the FastConnect edge. So, conceptually, this is the correct side of the equation.

Google Cloud Router: As discussed previously, the Cloud Router is the Google Cloud component specifically designed for BGP routing. It establishes BGP sessions with the corresponding routing entity on the other side (in this case, the FastConnect connection point on the OCI side, acting as the "CPE").

Why the other options are incorrect:

A). OCI Dynamic Routing Gateway (DRG) and Google Cloud Virtual Private Cloud (VPC) Network: The DRG is the central point for routing within OCI, but it doesn't directly handle the BGP peering with Google Cloud. The FastConnect connection (acting as the "CPE") handles that. The VPC is the overall network construct, not the BGP component.

C). OCI Virtual Cloud Network (VCN) and Google Cloud Interconnect Attachment: The VCN is the OCI network itself, and the Interconnect Attachment is a Layer 2 construct. Neither of these are responsible for BGP.

D). OCI FastConnect and Google Cloud Partner Interconnect: FastConnect is the physical/virtual connection, and Partner Interconnect is the overall service. They facilitate the connection, but the BGP sessions are established by the "CPE" function on the OCI side and the Cloud Router on the Google Cloud side.

질문 #50

Which tasks are performed in the Azure portal when using Oracle Database@Azure?

- A. Configuring Oracle database homes
- B. Enabling Data Guard for database backups
- C. Provisioning container and pluggable databases
- D. Managing and maintaining Exadata VM cluster and infrastructure

정답: D

설명:

In Oracle Database@Azure, the Azure portal is used for managing and maintaining Exadata VM clusters and infrastructure, aligning with its Azure-native management approach. Data Guard (Option A), database homes (Option B), and container/pluggable databases (Option D) are configured post-provisioning, often via database tools, not directly as portal tasks. Oracle's documentation specifies this infrastructure focus in Azure.

질문 # 51

What is the significance of the "customer tenancy" in the context of provisioning Oracle Database@Azure?

- A. It defines the network connectivity between the Exadata systems and the Azure Virtual Network.
- B. It specifies the billing relationship between Oracle and the customer for the service.
- C. It represents the OCI tenancy where the Exadata resources are provisioned.
- D. It refers to the Azure subscription where the cross-connect is established.

정답: C

설명:

In the context of Oracle Database@Azure, the "customer tenancy" refers to the customer's Oracle Cloud Infrastructure (OCI) tenancy. The Exadata infrastructure, which is a core component of the service, is provisioned and resides within this OCI tenancy. While the service is accessed and integrated with Azure, the underlying Exadata hardware and its management occur within the customer's designated space in OCI.

질문 # 52

.....

Oracle인증1Z0-1151-25시험을 위하여 최고의 선택이 필요합니다. Itcertkr 선택으로 좋은 성적도 얻고 하면서 저희 선택을 후회하지 않을것입니다. 돈은 적게 들고 효과는 아주 좋습니다. 우리Itcertkr여러분의 응시분비에 많은 도움이 될뿐만 아니라 Oracle인증1Z0-1151-25시험은 또 일년무료 업데이트서비스를 제공합니다. 작은 돈을 투자하고 이렇게 좋은 성과는 아주 바람직하다고 봅니다.
