## AD0-E725 echter Test & AD0-E725 sicherlich-zu-bestehen & AD0-E725 Testguide

Sie können im Internet kostenlos die Lerntipps und einen Teil der Prüfungsfragen und Antworten zur Adobe AD0-E725 Zertifizierungsprüfung von ITZert als Probe herunterladen.

### Adobe Commerce Developer Expert AD0-E725 Prüfungsfragen mit Lösungen (Q49-Q54):

#### 49. Frage

An Adobe Commerce Developer is implementing asynchronous communication with a third-party system using RabbitMQ. The XML files used must be able to configure a local queue and consume messages published by the third-party system. Which files should the Developer use?

- A. `queue_topology.xml` and `queue_consumer.xml`
- B. `queue_topology.xml` and `queue_publisher.xml`
- C. `communication.xml`, `queue_topology.xml`, and `queue_publisher.xml`
- D. `communication.xml`, `queue_topology.xml`, and `queue_consumer.xml`

**Antwort: A**

#### 50. Frage

A customer wants to create a set of CMS blocks to be used on their website but does not wish to create these manually. An Adobe Commerce Developer is tasked to install the CMS blocks programmatically. How should the Developer achieve this?

- A. Implement the `DataPatchInterface`, then use the block repository in the `apply()` function to create the blocks.
- B. Implement the `SchemaSetupInterface`, then use the block repository in the `apply()` function to create the blocks.
- C. Implement the `InstallSchemaInterface`, then use the block repository in the `execute()` function to create the blocks.

**Antwort: A**

Begründung:

The correct approach for creating CMS blocks programmatically is to use a Data Patch (`DataPatchInterface`). Data Patches are used for creating or modifying data programmatically (e.g., CMS blocks, CMS pages, configuration values). `InstallSchemaInterface` (B) and `SchemaSetupInterface` (C) are used for modifying database schema, not data.

Adobe Commerce DevDocs - Data patches

#### 51. Frage

A Developer working on an Adobe Commerce Cloud project encounters an issue with the database service that requires investigation. To troubleshoot the issue, the Developer decides to securely access the cloud services from the local machine to directly interact with the services and run diagnostic commands.

Which command step is required to achieve this?

- A. Use the `magento-cloud service:connect` command to access the cloud services.
- B. Use the `php bin/magento cloud:tunnel:connect` command to access the cloud services.

- C. Use the magento-cloud tunnelopen command to access the cloud services.

**Antwort: C**

### 52. Frage

A Developer is working on an Adobe Commerce Cloud project and needs to upgrade a Redis service on production to the latest version for improved performance and security.

Which step should the Developer follow to upgrade the installed service version in Adobe Commerce Cloud?

- A. Use the magento-cloud service:update command.
- B. Submit a ticket to Adobe support.
- C. Edit the services.yaml file to specify the new service version.

**Antwort: C**

Begründung:

Service versions (Redis, MySQL, Elasticsearch, RabbitMQ, etc.) are defined in the services.yaml file in Adobe Commerce Cloud. To upgrade a service version, the developer updates the version number in services.yaml and redeploys.

A (support ticket) is not required unless there is a provisioning problem.

C (magento-cloud service:update) is not a valid CLI command.

B is correct: update services.yaml and redeploy.

Reference:

Adobe Commerce Cloud DevDocs - services.yaml

### 53. Frage

A client recently started using the new Adobe Live Search functionality. They report an issue with content from the website, such as CMS blocks, not returning with the search result.

A Developer is asked to investigate because the client wants this content to be part of the data pool of Live Search.

How should the Developer respond to the client?

- A. Share documentation regarding the limitations of Live Search.
- B. Advise the client to enable content for Live Search from the admin panel.
- C. Extend the class Magento\LiveSearchAdapter\Model\Attribute\Metadata.

**Antwort: A**

Begründung:

Adobe Live Search is designed to handle catalog product data only. It does not index or return CMS content such as blocks or pages. This is a known limitation of Live Search.

B is invalid because there is no admin setting to enable CMS content in Live Search.

C is not a supported solution; extending Live Search classes will not include CMS content.
