

Plat-Dev-210 Test Simulator Online - Hot Plat-Dev-210 Spot Questions

If you download our study materials successfully, you can print our study materials on pages by the PDF version of our Plat-Dev-210 exam torrent. We believe these special functions of the PDF version will be very useful for you to prepare for your exam. We hope that you will like the PDF version of our Plat-Dev-210 question torrent. If you try to get the Salesforce Certified Omnistudio Developer certification that you will find there are so many chances wait for you. You can get a better job; you can get more salary. But if you are trouble with the difficult of Salesforce Certified Omnistudio Developer exam, you can consider choose our Plat-Dev-210 Exam Questions to improve your knowledge to pass Salesforce Certified Omnistudio Developer exam, which is your testimony of competence.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 2	<ul style="list-style-type: none">Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.

Topic 3	<ul style="list-style-type: none"> Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.

Hot Plat-Dev-210 Spot Questions - Plat-Dev-210 Authorized Test Dumps

Our Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam questions are being offered in three easy-to-use and compatible formats. This Plat-Dev-210 exam dumps formats offer a user-friendly interface and are compatible with all devices, operating systems, and browsers. The ValidDumps Salesforce Certified Omnistudio Developer (Plat-Dev-210) PDF questions file contains real and valid Salesforce Plat-Dev-210 exam questions that assist you in Plat-Dev-210 exam dumps preparation and boost the candidate's confidence to pass the challenging Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam easily.

Salesforce Certified Omnistudio Developer Sample Questions (Q75-Q80):

NEW QUESTION # 75

A developer is building a DataRaptor Load for an Integrate Procedure used in an OmniScript. Based on best practices, how should the developer configure the Input JSON?

- A. Build the Input JSON node by node in the DataRaptor Designer.
- **B. Copy the Input JSON from the OmniScript {Data} modal.**
- C. Copy the Input JSON from the DataRaptor Action Debug node.
- D. Build the Input JSON node by node in an editor.

Answer: B

Explanation:

The best practice for configuring the Input JSON for a DataRaptor Load is to copy the Input JSON from the OmniScript {Data} modal. This ensures that the Input JSON matches the data structure and format of the OmniScript data. The DataRaptor Action Debug node may not have the same data as the OmniScript data, and building the Input JSON node by node in an editor or in the DataRaptor Designer may introduce errors or inconsistencies.

NEW QUESTION # 76

A developer needs to configure a calculation procedure to calculate a subtotal using two different depending on whether the input Boolean variable is Customer is set to true or false.

How should a developer configure the calculation procedure to conditionally execute the correct formula?

- A. Use two separate Calculation Steps with the Conditional Step property selected: reference just the is Customer variable in the Conditional syntax (no comparison necessary)
- **B. Use two separate Calculation Steps with the Conditional Step property selected: use the ISTRUE (is Customer) and NOT (ISTRUE) (is Customer) functions in the Condition syntax.**
- C. Use two separate Calculation Steps with the Conditional Step property selected: compare the isCustomer variable directly to the literal true and false values in the Condition syntax.
- D. Use a single Calculation Steps with IF statement directly in the formula definition to reference the isCustomer variable and conditionally perform the appropriate calculation.

Answer: B

Explanation:

Using two separate Calculation Steps with the Conditional Step property selected allows the developer to specify different formulas based on different conditions. The ISTRUE(isCustomer) and NOT(ISTRUE (isCustomer)) functions are used to evaluate the Boolean variable in the Condition syntax. The other options are either missing the Conditional Step property, using incorrect comparison operators, or using an IF statement instead of separate Calculation Steps.

NEW QUESTION # 77

A developer examines data received from an external data source. The data is nested two levels down in the JSON structure. Which OmniStudio tool could the developer use to simplify this data?

- A. A guided workflow
- B. An integration Procedure
- C. A DataRaptor Transform
- D. An HTTP Action Element

Answer: C

Explanation:

A DataRaptor Transform can simplify nested data by transforming it into a flat structure. The developer can use JSON paths to map the input data to the output data and define the output structure.

NEW QUESTION # 78

Refer to the exhibit below.

□ What is the reason that the fields fail to display the fetched data?

- A. Lookup Mode is selected in the properties of the Type Ahead Block.
- B. FirstName, LastName, and BirthDate are not placed inside the Type Ahead Block.
- C. The typeHead key is not in the correct format.
- D. Use Data JSON is Not selected in the properties of the Type Ahead Block.

Answer: D

Explanation:

The Use Data JSON property must be selected in the properties of the Type Ahead Block in order to display the fetched data in the fields. The Lookup Mode property is used to specify the type of lookup to perform. The FirstName, LastName, and BirthDate fields can be placed inside or outside the Type Ahead Block. The typeHead key is in the correct format.

NEW QUESTION # 79

Why would a developer clone an Integration Procedure instead of versioning it?

- A. The new Integration Procedure will be used independently.
- B. The new Integration Procedure uses a Cache Block.
- C. The new Integration Procedure is Chainable.
- D. The new Integration Procedure is replacing stub data.

Answer: A

Explanation:

OmniStudio best practices dictate that versioning is used when enhancements are required within the same logical flow, while cloning is preferred when the new flow is functionally different and used separately.

* B. The new Integration Procedure will be used independently - Correct. Cloning creates an entirely new IP definition, ideal for building a similar but standalone process, rather than altering behavior for an existing process.

Incorrect Options:

- * A. Using a Cache Block is unrelated to cloning vs. versioning.
- * C. Replacing stub data does not require cloning; could be done in a version.
- * D. Chainability does not influence whether you should clone or version.
