The Salesforce Analytics-DA-201 Pdf Dumps enables you to study without any device, as it is a portable and easily shareable format, thus you can study Salesforce Analytics-DA-201 dumps on your preferred smart device such as your smartphone or in hard copy format.

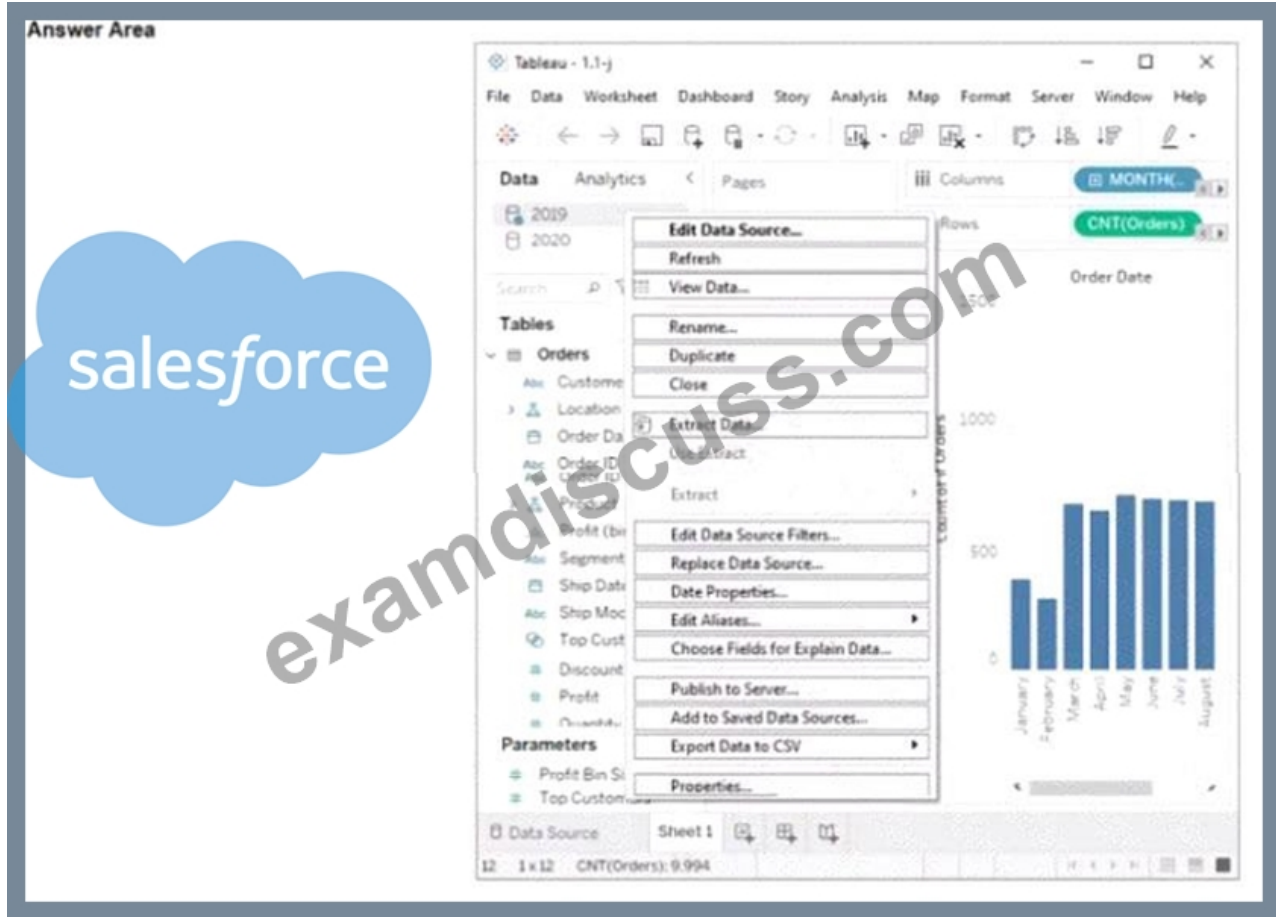

Salesforce Certified Tableau Data Analyst Sample Questions (Q155-Q160):

NEW QUESTION # 155

You have two data sources that use the same schema. One data source contains order data from 2019 and the other data source contains order data from 2020.

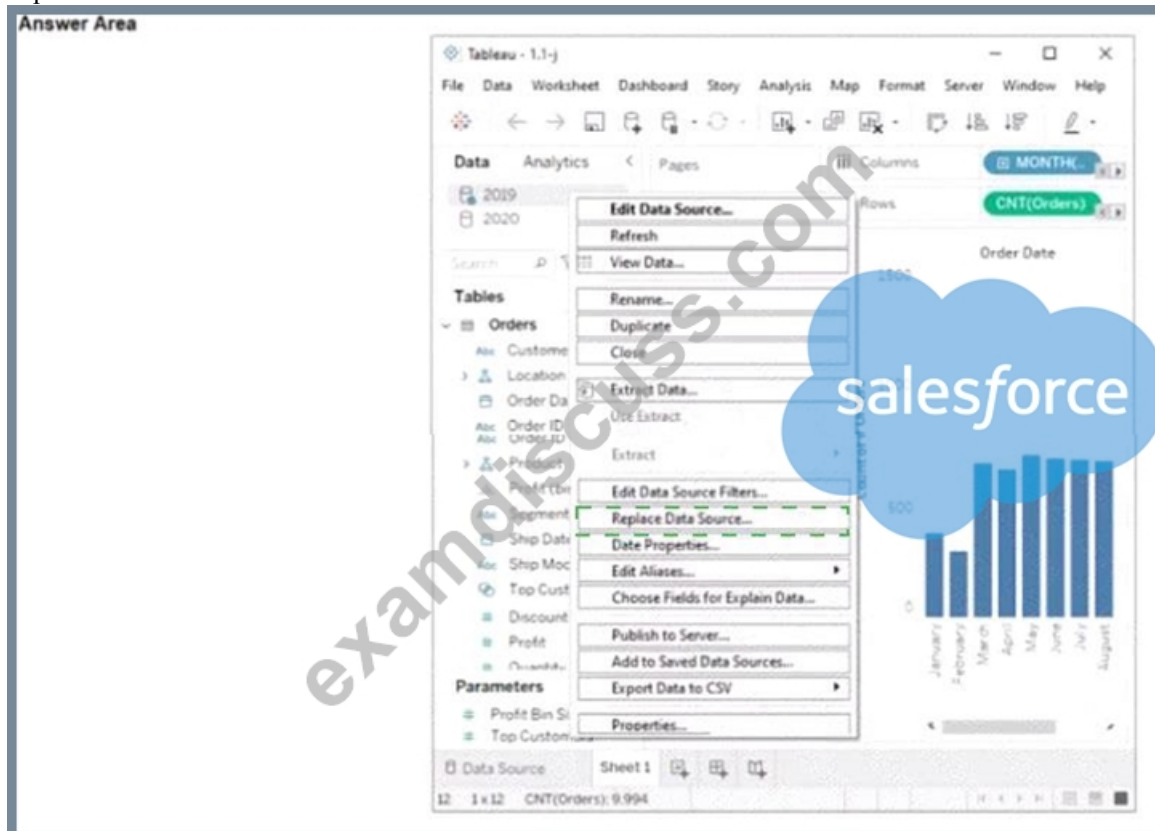

You have a worksheet that shows the orders from 2019.

You need to configure the worksheet to show the orders from 2020 without reloading the data.
Which option should you select?

Answer:

Explanation:

Explanation:

Replace Data Source

Replace Data Source is a feature that allows you to replace one data source with another one that has the same or similar fields and structure. It updates all the worksheets that use the original data source with the new one, without reloading the data. In this case, you want to replace the data source that contains order data from 2019 with the one that contains order data from 2020.

To replace the data source, you need to do the following steps:

- * Go to the Data Source tab at the bottom of the workbook to see the data source page. You will see a table that shows the fields and values from the original data source.

- * Click on the drop-down arrow next to the data source name at the top of the page and select Replace Data Source from the menu. This will open a dialog box that allows you to replace your data source with another one.

- * Select the data source that contains order data from 2020 from the list of available data sources and click OK. This will replace your original data source with the new one and update your worksheet accordingly. You may need to fix any broken fields or calculations that result from the replacement.

NEW QUESTION # 156

You have a data source that contains data for every city in the United States. The following is a sample of the data.

City	State	Country	Population
Miami	Florida	United States	454 279
New York	New York	United States	8 419 000
Seattle	Washington	United States	724 305
Chicago	Illinois	United States	2 710 000

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million. Which type of filter should you use?

- A. Wildcard filter
- B. General filter
- C. Condition filter
- D. Top filter

Answer: C

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New*" or "*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:

NEW QUESTION # 157

You have the following tiled dashboard that has one sheet.

You want to replace the sheet with Sheet2.
What should you do?

- A. From the context menu of Sheet3. select Remove Dashboard item
- B. Right-click Sheet2 and select Add to Dashboard.
- C. From the context menu of Sheet3. select Deselect
- D. Select Sheet3 and click the Swap Sheet button next to Sheet2.
- E. Drag Sheet2 to the dashboard.

Answer: E

Explanation:

In Tableau, to replace a sheet on a dashboard, you can simply drag the desired sheet (Sheet2 in this case) from the sheets list onto the dashboard area where the current sheet (Sheet3) resides. This action will replace the existing sheet with the new one. Right-clicking and adding to the dashboard adds an additional sheet rather than replacing, and the context menu options mentioned in the other choices are not the standard methods for replacing sheets within a dashboard.

NEW QUESTION # 158

Open the link to Book1 found on the desktop. Open the sales dashboard.
Add the Sales by State sheet in a Show/Hide button to the right side of the dashboard.

Answer:

Explanation:

check the steps below in explanation.

Explanation:

To add the Sales by State sheet in a Show/Hide button to the right side of the dashboard, you need to do the following steps:

- * Open the link to Book1 found on the desktop. This will open the Tableau workbook that contains the sales dashboard.
- * Click on the sales dashboard tab at the bottom of the workbook to open the dashboard. You will see a dashboard that shows various charts and filters related to sales data.
- * Drag Sales by State from the Sheets pane to the right side of the dashboard. This will add the sheet as a floating element on the dashboard. You can resize and position it as you like.
- * Right-click on Sales by State and select Add Show/Hide Button from the menu. This will add a button that allows you to show or hide the sheet on the dashboard. You can customize the appearance and behavior of the button by clicking on it and using the options on the Marks card.
- * Optionally, you can drag a vertical layout container from the Objects pane to the right side of the dashboard and place Sales by State and its button inside it. This will help you organize your dashboard elements and align them neatly.
