

NCM-MCI-6.10 Test Answers - Nutanix Certified Master - Multicloud Infrastructure (NCM-MCI) Test Torrent & NCM-MCI-6.10 Guide Torrent

BONUS!!! Download part of TestInsides NCM-MCI-6.10 dumps for free: <https://drive.google.com/open?id=1gRqDwyDrM8zW3p5ce1P7XAFxfWOHRRKF>

Getting ready for Nutanix NCM-MCI-6.10 exam, do you have confidence to sail through the certification exam? Don't be afraid. TestInsides can supply you with the best practice test materials. And TestInsides Nutanix NCM-MCI-6.10 Exam Dumps is the most comprehensive exam materials which can give your courage and confidence to pass NCM-MCI-6.10 test that is proved by many candidates.

With the rapid development of computer, network, and semiconductor techniques, the market for people is becoming more and more hotly contested. Passing a NCM-MCI-6.10 exam to get a certificate will help you to look for a better job and get a higher salary. If you are worried about your job, your wage, and a NCM-MCI-6.10 Certification, if you are going to change this, we are going to help you solve your problem by our NCM-MCI-6.10 exam torrent with high quality, now allow us to introduce you our NCM-MCI-6.10 guide torrent.

>> NCM-MCI-6.10 100% Correct Answers <<

NCM-MCI-6.10 Test Vce Free | NCM-MCI-6.10 Pdf Exam Dump

We provide online customer service on the NCM-MCI-6.10 practice questions to the customers for 24 hours per day and we provide professional personnel to assist the client in the long distance online. If you have any questions and doubts about the NCM-

MCI-6.10 guide torrent we provide before or after the sale, you can contact us and we will send the customer service and the professional personnel to help you solve your issue about using NCM-MCI-6.10 Exam Materials. The client can contact us by sending mails or contact us online. We will solve your problem on NCM-MCI-6.10 exam questions until you pass the exam.

Nutanix Certified Master - Multicloud Infrastructure (NCM-MCI) Sample Questions (Q12-Q17):

NEW QUESTION # 12

TASK 1

A newly created Windows VM "SQL02" is experiencing poor storage performance when compared to "SQL01" running within the same cluster, on the same storage container.

The cluster is in a healthy state.

Create a new session named Monitor SQL02 with meaningful metrics. Right click on the session page and click Select All then paste this into Notepad and save it as Task 1.txt on the desktop.

Also, save the analysis as a report named MonitorSQL02 and send the report as a PDF on a daily basis to perf_group@ACME.org. Reports should not be retained. If any new objects need to be created, use monitovm2 in the name. Finally, correct the issue within "SQL02".

Notes:

- * Do not power on the VMs.
- * While you will be creating a session, you will need to examine the VM configurations to determine the issue.
- * Do not delete the VM to resolve the issue, any other destructive change is acceptable.

Answer:

Explanation:

See the Explanation below for detailed answer.

Explanation:

Here is the step-by-step solution to all three tasks, performed within the Nutanix Prism interface.

Task 1: Create Monitoring Session & Save Metrics

- * From the Prism Central dashboard, navigate to Operations > Analysis.
- * Click the + New Session button.
- * Name the session Monitor SQL02.
- * In the "Entities" search box, type SQL01 and select VM: SQL01.
- * In the "Entities" search box, type SQL02 and select VM: SQL02.
- * Click Add Charts > New Chart.
- * Title: Storage IOPS
- * Metric: Storage Controller IOPS
- * Click Add.
- * Click Add Charts > New Chart.
- * Title: Storage Latency
- * Metric: Storage Controller Latency
- * Click Add.
- * Click Add Charts > New Chart.
- * Title: Storage Bandwidth
- * Metric: Storage Controller Bandwidth
- * Click Add.
- * Click Save Session.
- * With the "Monitor SQL02" session open, right-click anywhere on the page and click Select All.
- * Right-click again and select Copy.
- * Open Notepad, paste the content, and save the file to the desktop as Task 1.txt.

(The content pasted into Task 1.txt would be the session's chart configurations, showing metrics for SQL01 and SQL02.)

Task 2: Create and Schedule the Report

- * While still in the "Monitor SQL02" analysis session, click the Save as Report button (it looks like a bookmark icon).
- * Name the report MonitorSQL02 and click Save.
- * Navigate to Operations > Reports.
- * Find the MonitorSQL02 report in the list. Select its checkbox.
- * Click the Actions dropdown and select Schedule.
- * Configure the schedule with the following settings:
 - * Schedule Name: monitovm2_daily_report
 - * Recurrence: Daily
 - * Start Time: (Set to a time, e.g., 8:00 AM)

- * Repeat every: 1 day(s)
- * Retention Policy: Uncheck the "Retain a copy of the report" box. (This ensures reports are not retained).
- * Email Report: Check this box.
- * Format: PDF
- * Recipients: perf_group@ACME.org
- * Click Save.

Task 3: Identify and Correct the Performance Issue

This task is performed without powering on the VMs, indicating a configuration error.

Investigation

- * Navigate to VMs > Table view.
- * Click on the SQL01 (the good VM) and select the Configuration tab.
- * Expand the Disks section. Observe that the primary disk is attached to a SCSI bus (e.g., scsi.0). This is the high-performance standard.
- * Return to the VM list and click on SQL02 (the problem VM).
- * Expand the Disks section.

Root Cause

You discover that the primary disk for SQL02 is attached to an IDE bus. The IDE bus has significant performance limitations and is not suitable for a database server, causing the poor storage performance.

Correction

- * With the SQL02 VM selected, click the Update button.
- * In the "Update VM" dialog, scroll down to the Disks section.
- * Find the disk attached to the IDE bus. Click the Edit (pencil) icon for that disk.
- * Change the Bus Type dropdown from IDE to SCSI.
- * The Device Index will automatically populate (e.g., scsi.0).
- * Click Save in the "Update Disk" dialog.
- * (Note: A "VirtIO SCSI Controller" will be automatically added to the VM configuration if one was not already present.)
- * Click Save in the "Update VM" dialog.

The VM SQL02 is now configured to use the high-performance VirtIO-SCSI controller, which will resolve the storage performance discrepancy once the VM is powered on.

NEW QUESTION # 13

Task 8

An administrator has environment that will soon be upgraded to 6.5. In the meantime, they need to implement log and apply a security policy named Staging_Production, such that not VM in the Staging Environment can communicate with any VM in the production Environment, Configure the environment to satisfy this requirement.

Note: All other configurations not indicated must be left at their default values.

Answer:

Explanation:

See the Explanation for step by step solution.

Explanation:

To configure the environment to satisfy the requirement of implementing a security policy named Staging_Production, such that no VM in the Staging Environment can communicate with any VM in the production Environment, you need to do the following steps: Log in to Prism Central and go to Network > Security Policies > Create Security Policy. Enter Staging_Production as the name of the security policy and select Cluster A as the cluster.

In the Scope section, select VMs as the entity type and add the VMs that belong to the Staging Environment and the Production Environment as the entities. You can use tags or categories to filter the VMs based on their environment.

In the Rules section, create a new rule with the following settings:

Direction: Bidirectional

Protocol: Any

Source: Staging Environment

Destination: Production Environment

Action: Deny

Save the security policy and apply it to the cluster.

This will create a security policy that will block any traffic between the VMs in the Staging Environment and the VMs in the Production Environment. You can verify that the security policy is working by trying to ping or access any VM in the Production Environment from any VM in the Staging Environment, or vice versa.

You should not be able to do so.

NEW QUESTION # 14

Task 9

The application team has requested several mission-critical VMs to be configured for disaster recovery. The remote site (when added) will not be managed by Prism Central. As such, this solution should be built using the Web Console.

Disaster Recovery requirements per VM:

Mkt01

RPO: 2 hours

Retention: 5 snapshots

Fin01

RPO: 15 minutes

Retention: 7 days

Dev01

RPO: 1 day

Retention: 2 snapshots

Configure a DR solution that meets the stated requirements.

Any objects created in this item must start with the name of the VM being protected.

Note: the remote site will be added later

Answer:

Explanation:

See the Explanation for step by step solution.

Explanation:

To configure a DR solution that meets the stated requirements, you can follow these steps:

Log in to the Web Console of the source cluster where the VMs are running.

Click on Protection Domains on the left menu and click on Create Protection Domain.

Enter a name for the protection domain, such as PD_Mkt01, and a description if required. Click Next.

Select Mkt01 from the list of VMs and click Next.

Select Schedule Based from the drop-down menu and enter 2 hours as the interval. Click Next.

Select Remote Site from the drop-down menu and choose the remote site where you want to replicate the VM.

Click Next.

Enter 5 as the number of snapshots to retain on both local and remote sites. Click Next.

Review the protection domain details and click Finish.

Repeat the same steps for Fin01 and Dev01, using PD_Fin01 and PD_Dev01 as the protection domain names, and adjusting the interval and retention values according to the requirements.

A protection domain is a grouping of Virtual Machines for disaster recovery purposes. Enter a name (using alpha numeric characters only) for the protection domain you would like to create. You will then be guided into assigning Virtual Machines to it, and scheduling it.

NEW QUESTION # 15

A company who offers Infrastructure as a Service needs to onboard a new customer. The new customer requires a dedicated cloud plan which tolerates two host failures.

The customer is planning to move current workloads in three waves, with three months between waves starting today:

- * Wave One: 100 VMs
- * Wave Two: 50 VMs
- * Wave Three: 20 VMs

Workload profile is:

- * vCPU: 4
- * vRAM: 16 GB
- * Storage: 200 GB

The service provider company needs to estimate required resources upfront, to accommodate customer requirements, considering also that:

- * limit the number of total nodes
- * selected system vendor HPE
- * selected model DX365-10-G11-NVMe
- * full-flash node (including NVMe + SSD)
- * 12 months runway

Create and save the scenario as IaaS and export to the desktop, name the file IaaS-requirement.pdf Note: You must export the PDF to the desktop as IaaS-requirement.pdf to receive any credit.

Answer:

Explanation:

See the Explanation below for detailed answer.

Explanation:

Here is the step-by-step solution to create and export the capacity planning scenario. This task is performed within Prism Central.

1. Navigate to the Planning Dashboard
 - * From the Prism Central main menu (hamburger icon), navigate to Operations > Planning.
2. Create and Define the Scenario
 - * Click the + Create Scenario button.
 - * In the dialog box:
 - * Scenario Name: IaaS
 - * Scenario Type: Select New Workload
 - * Click Create. This will open the scenario editor.
3. Configure Cluster and Runway Settings
 - * In the "IaaS" scenario editor, find the Runway setting (top left) and set it to 12 Months.
 - * Find the Cluster configuration tile and click Edit.

- * Set Number of Host Failures to Tolerate to 2.
- * Click Save.
- 4. Define the Workload Profile
 - * In the Workloads section, click the + Add Workload button.
 - * Select Create a new workload profile.
 - * Fill in the VM specifications:
 - * Workload Name: Customer-VM (or similar)
 - * vCPU per VM: 4
 - * Memory per VM: 16 GB
 - * Storage per VM: 200 GB
 - * Click Add.
- 5. Set the Workload Growth Plan (Waves)
 - * You will be returned to the main scenario editor. In the timeline section ("Workload Plan"), add the VMs:
 - * Wave One (Today):
 - * Click + Add under the "Today" column.
 - * Select the Customer-VM profile.
 - * Enter 100 VMs.
 - * Click Add.
 - * Wave Two (3 Months):
 - * Click the + icon on the timeline itself.
 - * Set the date to 3 Months from today.
 - * Click + Add under this new "3 Months" column.
 - * Select the Customer-VM profile.
 - * Enter 50 VMs.
 - * Click Add.
 - * Wave Three (6 Months):
 - * Click the + icon on the timeline.
 - * Set the date to 6 Months from today.
 - * Click + Add under this new "6 Months" column.
 - * Select the Customer-VM profile.
 - * Enter 20 VMs.
 - * Click Add.
- 6. Select the Hardware
 - * In the Hardware configuration tile, click Change Hardware.
 - * In the "Select Hardware" pane:
 - * Vendor: Select HPE.
 - * Model: Search for and select DX365-10-G11-NVMe.
 - * Note: This model is full-flash by definition, satisfying the requirement.
 - * Click Done. The planner will recalculate the required nodes.
- 7. Save and Export the Scenario
 - * Click the Save icon (floppy disk) in the top-right corner to save the IaaS scenario.
 - * Click the Export icon (arrow pointing down) in the top-right corner.
 - * Select PDF from the dropdown menu.
 - * A "Save As" dialog will appear.
 - * Navigate to the Desktop.
 - * Set the file name to IaaS-requirement.pdf.
 - * Click Save.

NEW QUESTION # 16

Task 12

The application team is reporting performance degradation for a business-critical application that runs processes all day on Saturdays.

The team is requesting monitoring of processor, memory and storage utilization for the three VMs that make up the database cluster for the application: ORA01, ORA02 and ORA03.

The report should contain tables for the following:

At the cluster level, only for the current cluster:

The maximum percentage of CPU used

At the VM level, including any future VM with the prefix ORA:

The maximum time taken to process I/O Read requests

The Maximum percentage of time a VM waits to use physical CPU, out of the local CPU time allotted to the VM.

The report should run on Sundays at 12:00 AM for the previous 24 hours. The report should be emailed to appdev@cyberdyne.net when completed.

Create a report named Weekends that meets these requirements

Note: You must name the report Weekends to receive any credit. Any other objects needed can be named as you see fit. SMTP is not configured.

Answer:

Explanation:

See the Explanation for step by step solution.

Explanation:

To create a report named Weekends that meets the requirements, you can follow these steps:

Log in to Prism Central and click on Entities on the left menu.

Select Virtual Machines from the drop-down menu and click on Create Report.

Enter Weekends as the report name and a description if required. Click Next.

Under the Custom Views section, select Data Table. Click Next.

Under the Entity Type option, select Cluster. Click Next.

Under the Custom Columns option, add the following variable: CPU Usage (%). Click Next.

Under the Aggregation option for CPU Usage (%), select Max. Click Next.

Under the Filter option, select Current Cluster from the drop-down menu. Click Next.

Click on Add to add this custom view to your report. Click Next.

Under the Custom Views section, select Data Table again. Click Next.

Under the Entity Type option, select VM. Click Next.

Under the Custom Columns option, add the following variables: Name, I/O Read Latency (ms), VM Ready Time (%). Click Next.

Under the Aggregation option for I/O Read Latency (ms) and VM Ready Time (%), select Max. Click Next.

Under the Filter option, enter ORA* in the Name field. This will include any future VM with the prefix ORA.

Click Next.

Click on Add to add this custom view to your report. Click Next.

Under the Report Settings option, select Weekly from the Schedule drop-down menu and choose Sunday as the day of week. Enter 12:00 AM as the time of day. Enter appdev@cyberdyne.net as the Email Recipient.

Select CSV as the Report Output Format. Click Next.

Review the report details and click Finish.

NEW QUESTION # 17

.....

Take advantage of this golden opportunity, and download our Nutanix Certified Master - Multicloud Infrastructure (NCM-MCI) (NCM-MCI-6.10) updated exam questions to grab the most prestigious credential in one go. TestInsides has formulated the Nutanix Certified Master - Multicloud Infrastructure (NCM-MCI) (NCM-MCI-6.10) exam dumps in these three user-friendly formats: Nutanix Certified Master - Multicloud Infrastructure (NCM-MCI) (NCM-MCI-6.10) Web-Based Practice Test, Desktop Practice Exam Software, and NCM-MCI-6.10 questions PDF file. You will find the specifications of these formats below to understand them properly.

NCM-MCI-6.10 Test Vce Free: <https://www.testinsides.top/NCM-MCI-6.10-dumps-review.html>

All customers can feel comfortable when they choose to buy our NCM-MCI-6.10 study tool, Now I want to introduce the online version of our NCM-MCI-6.10 learning guide to you, If you take enough practice tests on NCM-MCI-6.10 practice exam software by TestInsides, you'll be more comfortable when you walk in on Nutanix exam day, The candidates all enjoy learning on our NCM-MCI-6.10 practice exam study materials.

International Franchising in Industrialized Markets: Western and Northern Europe, All need to be built, All customers can feel comfortable when they choose to buy our NCM-MCI-6.10 Study Tool.

Now I want to introduce the online version of our NCM-MCI-6.10 learning guide to you, If you take enough practice tests on NCM-MCI-6.10 practice exam software by TestInsides, you'll be more comfortable when you walk in on Nutanix exam day.

Pass Guaranteed Nutanix - NCM-MCI-6.10 Updated 100% Correct Answers

The candidates all enjoy learning on our NCM-MCI-6.10 practice exam study materials, There are the official study guides from
