Fortinet NSE 4 - FortiOS 7.6 Administrator Sample Questions (Q14-Q19):

NEW QUESTION # 14

An administrator wants to configure dead peer detection (DPD) on IPsec VPN for detecting dead tunnels. The requirement is that FortiGate sends DPD probes only when there is no inbound traffic.

Which DPD mode on FortiGate meets this requirement?

- A. On Demand
- B. On Idle
- C. Enabled
- D. Usabled

Answer: A

Explanation:

Based on the FortiOS 7.6 Infrastructure and IPsec VPN documentation, Dead Peer Detection (DPD) can be configured in three primary modes: On Demand, On Idle, and Disabled.

On Demand (Default Mode): This mode is specifically designed to minimize unnecessary traffic. In this mode, FortiGate sends DPD probes only when there is no inbound traffic but the FortiGate is attempting to send outbound traffic. Because network communication is typically bidirectional, the absence of inbound traffic while outbound traffic is being sent is a primary indicator of a potentially dead tunnel. This matches the specific requirement described in the question.

On Idle: In this mode, DPD probes are sent if no traffic (neither inbound nor outbound) has been observed in the tunnel for a specific period. It verifies the tunnel status even when the connection is completely idle.

Enabled: In older versions or specific CLI contexts, "Enabled" may refer to periodic DPD, but in the current FortiOS 7.x/7.6 GUI and CLI terminology for Phase 1 settings, the active modes are defined as on-demand or on-idle.

Disabled: In this mode, the FortiGate does not send DPD probes but will still respond to DPD probes sent by the remote peer. The requirement that the administrator wants probes sent only when there is no inbound traffic (usually implying the FortiGate is sending but not receiving) is the fundamental definition of the On Demand mechanism in the Fortinet curriculum.

NEW QUESTION # 15

Which two components are part of the secure internet access (SIA) agent-based mode on FortiSASE? (Choose two.)

- A. FortiExtender
- B. VPN policies
- C. The proxy auto-configuration (PAC) file
- D. FortiSASE Firewall-as-a-Service (FWaaS)

Answer: B,D

Explanation:

In FortiSASE Secure Internet Access (SIA) agent-based mode, traffic steering and security enforcement rely on components integrated with the FortiClient agent.

Components used in SIA agent-based mode

A . FortiSASE Firewall-as-a-Service (FWaaS)

Correct.

FWaaS is a core security component of FortiSASE.

It enforces firewall policies, security inspection, and access control for agent-based users.

All user traffic tunneled by the agent is inspected by FWaaS.

C . VPN policies

Correct.

In agent-based mode, the FortiClient establishes a secure tunnel to FortiSASE.

VPN policies define:

Authentication

Access control

Traffic steering

These policies are fundamental to agent-based connectivity.

Why the other options are incorrect

B . Proxy auto-configuration (PAC) file

PAC files are used in agentless or proxy-based modes, not agent-based SIA.

D). FortiExtender

FortiExtender is a WAN extension device and is unrelated to FortiSASE SIA agent-based architecture.

NEW QUESTION # 16

An administrator wants to form an HA cluster using the FGCP protocol.

Which two requirements must the administrator ensure both members fulfill? (Choose two.)

- A. They must have the same number of configured VDOMs.
- B. They must have the heartbeat interfaces in the same subnet.
- C. They must have the same hard drive configuration.
- D. They must have the same HA group ID.

Answer: A,D

Explanation:

They must have the same HA group ID → Both FortiGate units must use the same HA group ID to join the same FGCP cluster.

They must have the same number of configured VDOMs → VDOM configurations must match across cluster members to ensure configuration and state synchronization.

NEW QUESTION # 17

A remote user reports slow SSL VPN performance and frequent disconnections. The user is located in an area with poor internet connectivity.

What setting should the administrator adjust to improve the user's experience?

- A. Change the SSL VPN port to a non-standard port.
- B. Increase the session timeout for inactive sessions.
- C. Configure the DTLS timeout to accommodate high-latency connections.
- D. Enable split tunneling to reduce VPN traffic.

Answer: C

Explanation:

Adjusting the DTLS timeout helps maintain SSL VPN stability and performance in environments with poor or high-latency internet connectivity by allowing more time for packet retransmissions before dropping the connection.

NEW QUESTION # 18

What are two features of the NGFW profile-based mode? (Choose two.)

- A. NGFW profile-based mode can only be applied globally and not on individual VDOMs.
- **B. NGFW profile-based mode policies support both flow inspection and proxy inspection.**
- C. NGFW profile-based mode must require the use of central source NAT policy.
- **D. NGFW profile-based mode supports applying applications and web filtering profiles in a firewall policy.**

Answer: B,D

Explanation:

NGFW (Next Generation Firewall) profile-based mode in FortiGate allows policies to use both flow- based and proxy-based inspection modes, providing flexibility depending on security and performance requirements. Additionally, profile-based mode supports applying applications and web filtering profiles directly in a firewall policy, allowing granular control over the traffic.
