HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q199-Q204):

NEW QUESTION # 199

Which of the following does terraform apply change after you approve the execution plan? (Choose two.)

- A. Terraform code
- **B. Cloud infrastructure**
- C. The execution plan
- **D. State file**
- E. The .terraform directory

Answer: B,D

Explanation:

The terraform apply command changes both the cloud infrastructure and the state file after you approve the execution plan. The command creates, updates, or destroys the infrastructure resources to match the configuration. It also updates the state file to reflect the new state of the infrastructure. The terraform directory, the execution plan, and the Terraform code are not changed by the terraform apply command. References = Command: apply and Purpose of Terraform State

NEW QUESTION # 200

Your security team scanned some Terraform workspaces and found secrets stored in plaintext in state files. How can you protect that data?

- A. Always store your secrets in a secrets.tfvars file
- B. Edit your state file to scrub out the sensitive data
- C. Store the state in an encrypted backend
- D. Delete the state file every time you run Terraform

Answer: C

Explanation:

This is a secure way to protect sensitive data in the state file, as it will be encrypted at rest and in transit². The other options are not recommended, as they could lead to data loss, errors, or security breaches.

NEW QUESTION # 201

Which of the following module source paths does not specify a remote module?

- A. Source = "github.com:example/example"
- B. Source = "hashicorp/consul/aws"
- C. Source = "git@github.com:example/example.git"
- D. Source = "module/consul"

Answer: D

Explanation:

The module source path that does not specify a remote module is source = "module/consul". This specifies a local module, which is a module that is stored in a subdirectory of the current working directory. The other options are all examples of remote modules, which are modules that are stored outside of the current working directory and can be accessed by various protocols, such as Git, HTTP, or the Terraform Registry. Remote modules are useful for sharing and reusing code across different configurations and environments. References = [Module Sources], [Local Paths], [Terraform Registry], [Generic Git Repository], [GitHub]

NEW QUESTION # 202

When using a remote backend or terraform Cloud integration, where does Terraform save resource state?

- A. In an environment variable
- B. In memory
- C. In the remote backend or Terraform Cloud
- D. On the disk

Answer: C

Explanation:

This is where Terraform saves resource state when using a remote backend or Terraform Cloud integration, as it allows you to store and manage your state file in a remote location, such as a cloud storage service or Terraform Cloud's servers. This enables collaboration, security, and scalability for your Terraform infrastructure.

NEW QUESTION # 203

You have used Terraform to create an ephemeral development environment in the cloud and are now ready to destroy all the

Infrastructure described by your Terraform configuration To be safe, you would like to first see all the infrastructure that Terraform will delete.

Which command should you use to show all of the resources that will be deleted? Choose two correct answers.

- A. Run terraform show :destroy
- **B. Run terraform plan .destroy**
- C. Run terraform state rm '
- **D. Run terraform destroy and it will first output all the resource that will be deleted before prompting for approval**

Answer: B,D

Explanation:

To see all the resources that Terraform will delete, you can use either of these two commands:

terraform destroy will show the plan of destruction and ask for your confirmation before proceeding. You can cancel the command if you do not want to destroy the resources.

terraform plan -destroy will show the plan of destruction without asking for confirmation. You can use this command to review the changes before running terraform destroy. References = : Destroy Infrastructure : Plan Command: Options

NEW QUESTION # 204

.....

Once you have practiced on our HashiCorp Certified: Terraform Associate (004) (HCTA0-004) test questions, the system will automatically memorize and analyze all your practice. You must finish the model test in limited time. There have a timer on the right of the interface. Once you begin to do the exercises of the Terraform-Associate-004 test guide, the timer will start to work and count down. If you don't finish doing the exercises, all your exercises of the Terraform-Associate-004 Exam Questions will be delivered automatically. Then the system will generate a report according to your performance. You will clearly know where you are good at or not. Then you can make your own learning plans based on the report of the Terraform-Associate-004 test guide. Also, you will do more practices that you are not good at until you completely have no problem.
