

Exam Professional-Cloud-DevOps-Engineer Consultant, Reliable Professional-Cloud-DevOps-Engineer Test Practice

2025 Latest Pass4suresVCE Professional-Cloud-DevOps-Engineer PDF Dumps and Professional-Cloud-DevOps-Engineer Exam Engine Free Share: <https://drive.google.com/open?id=1IYv1e0CFGlgA5woRi7Vjg4Lnw07Ic8hK>

The Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) certification has become a basic requirement to advance rapidly in the information technology sector. Since Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) actual dumps are vital to prepare quickly for the examination. Therefore, you will need them if you desire to ace the Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) exam in a short time.

Google Professional-Cloud-DevOps-Engineer Exam Tests the candidate's knowledge in several areas, including cloud architecture, containerization, automation, monitoring, and security. Professional-Cloud-DevOps-Engineer exam is intended for professionals who have experience in designing and implementing DevOps solutions on the Google Cloud Platform. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification exam is designed to validate the candidates' knowledge and skills in deploying and managing applications on the Google Cloud Platform using DevOps methodologies. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification is highly valued in the industry and is an excellent way for professionals to demonstrate their expertise in Google Cloud technologies.

Quiz Google - Professional-Cloud-DevOps-Engineer - Google Cloud Certified - Professional Cloud DevOps Engineer Exam Useful Exam Consultant

The countless candidates have already passed their Professional-Cloud-DevOps-Engineer certification exam and they all used the real, valid, and updated Pass4suresVCE Professional-Cloud-DevOps-Engineer exam questions. So, why not, take a decision right now and ace your Professional-Cloud-DevOps-Engineer Exam Preparation with top-notch Professional-Cloud-DevOps-Engineer exam questions?

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q176-Q181):

NEW QUESTION # 176

The new version of your containerized application has been tested and is ready to be deployed to production on Google Kubernetes Engine (GKE) You could not fully load-test the new version in your pre-production environment and you need to ensure that the application does not have performance problems after deployment Your deployment must be automated What should you do?

- A. Deploy the application by using kubectl and use Config Connector to slowly ramp up traffic between versions. Use Cloud Monitoring to look for performance issues
- B. Deploy the application by using kubectl and set the spec. updatestrategy. type field to RollingUpdate Use Cloud Monitoring to look for performance issues, and run the kubectl rollback command if there are any issues.
- C. Deploy the application through a continuous delivery pipeline by using blue/green deployments Migrate traffic to the new version of the application and use Cloud Monitoring to look for performance issues
- D. Deploy the application through a continuous delivery pipeline by using canary deployments Use Cloud Monitoring to look for performance issues, and ramp up traffic as supported by the metrics

Answer: D

Explanation:

The best option for deploying a new version of your containerized application to production on GKE and ensuring that the

application does not have performance problems after deployment is to deploy the application through a continuous delivery pipeline by using canary deployments, use Cloud Monitoring to look for performance issues, and ramp up traffic as supported by the metrics. A canary deployment is a deployment strategy that involves releasing a new version of an application to a subset of users or servers and monitoring its performance and reliability. This way, you can test the new version in the production environment with real traffic and load, and gradually increase the traffic as the metrics indicate. You can use Cloud Monitoring to collect and analyze metrics from your application and GKE cluster, such as latency, error rate, CPU utilization, and memory usage. You can also use Cloud Monitoring to set up alerts and dashboards to track the performance of your application.

NEW QUESTION # 177

You are investigating issues in your production application that runs on Google Kubernetes Engine (GKE).

You determined that the source of the issue is a recently updated container image, although the exact change in code was not identified. The deployment is currently pointing to the latest tag. You need to update your cluster to run a version of the container that functions as intended. What should you do?

- A. Build a new container from a previous Git tag, and do a rolling update on the deployment to the new container.
- B. Create a new tag called stable that points to the previously working container, and change the deployment to point to the new tag.
- C. **Alter the deployment to point to the sha256 digest of the previously working container.**
- D. Apply the latest tag to the previous container image, and do a rolling update on the deployment.

Answer: C

NEW QUESTION # 178

You are running an application in a virtual machine (VM) using a custom Debian image. The image has the Stackdriver Logging agent installed. The VM has the cloud-platform scope. The application is logging information via syslog. You want to use Stackdriver Logging in the Google Cloud Platform Console to visualize the logs. You notice that syslog is not showing up in the "All logs" dropdown list of the Logs Viewer. What is the first thing you should do?

- A. **SSH to the VM and execute the following commands on your VM: ps aux | grep fluentd**
- B. Look for the agent's test log entry in the Logs Viewer.
- C. Install the most recent version of the Stackdriver agent.
- D. Verify the VM service account access scope includes the monitoring.write scope.

Answer: A

Explanation:

https://cloud.google.com/compute/docs/access/service-accounts#associating_a_service_account_to_an_instance

NEW QUESTION # 179

Your company follows Site Reliability Engineering principles. You are writing a postmortem for an incident, triggered by a software change, that severely affected users. You want to prevent severe incidents from happening in the future. What should you do?

- A. Identify engineers responsible for the incident and escalate to their senior management.
- B. Design a policy that will require on-call teams to immediately call engineers and management to discuss a plan of action if an incident occurs.
- C. Follow up with the employees who reviewed the changes and prescribe practices they should follow in the future.
- D. **Ensure that test cases that catch errors of this type are run successfully before new software releases.**

Answer: D

Explanation:

The best way to prevent severe incidents from happening in the future is to ensure that test cases that catch errors of this type are run successfully before new software releases. This is aligned with the Site Reliability Engineering principle of testing for reliability.

NEW QUESTION # 180

A third-party application needs to have a service account key to work properly. When you try to export the key from your cloud

project you receive an error "The organization policy constraint iam.disableServiceAccountKeyCreation is enforced. You need to make the third-party application work while following Google-recommended security practices. What should you do?"

- A. Remove the iam.disableServiceAccountKeyCreation policy at the organization level, and create a key.
- B. Enable the default service account key, and download the key
- **C. Add a rule to set the iam.disableServiceAccountKeyCreation policy to off in your project and create a key.**
- D. Disable the service account key creation policy at the project's folder, and download the default key

Answer: C

Explanation:

Explanation

The best option for making the third-party application work while following Google-recommended security practices is to add a rule to set the iam.disableServiceAccountKeyCreation policy to off in your project and create a key. The iam.disableServiceAccountKeyCreation policy is an organization policy that controls whether service account keys can be created in a project or organization. By default, this policy is set to on, which means that service account keys cannot be created. However, you can override this policy at a lower level, such as a project, by adding a rule to set it to off. This way, you can create a service account key for your project without affecting other projects or organizations. You should also follow the best practices for managing service account keys, such as rotating them regularly, storing them securely, and deleting them when they are no longer needed.

NEW QUESTION # 181

.....

The second form is Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) web-based practice test which can be accessed through online browsing. The Professional-Cloud-DevOps-Engineer web-based practice test is supported by browsers like Firefox, Microsoft Edge, Google Chrome, and Safari. You don't need to install any plugins or software to attempt the Professional-Cloud-DevOps-Engineer web-based practice test. This online Google Professional-Cloud-DevOps-Engineer exam is also compatible with all operating systems.
